Hello everyone,

I just changed over to eGroups as the host for the Stupid Scanner Tricks list. I should have subscrbed all of you auto-magically to this list from the info I had at the old list.

This new host has a website set up for the list with things like a calendar and on-line polls. You can also read, reply, and post to the list on-line. The address is:

http://www.egroups.com/list/stupidscannertricks/

If you have a friend who would like to subscribe just have them e-mail stupidscannertricks-subscribe@egroups.com and they will be subscribed.

If you changed your mind and want to unsubscribe it's just as easy. Just substitute "unsubscribe" into the above address instead of subscribe. The e-mails can be blank.

If you subscribed with a digest mode, I'll have to re-digest you. I should have that done today. You should also be able to do it on-line yourself if you like.

Thanks,

Rich Barron

You're probably too far away. I know that I had line-of-sight to 3 fast food places and could only pick up two of them and they were probably less than 1/4 mile or so. Plus you have to deal with the concrete walls between the little handheld radios and you.

If you have a handheld or mobile scanner park outside WalMart and do a search in the buisness bands. I've also heard of people doing this inside WalMart with their floor model scanners.

Below is the result of your feedback form. It was submitted by () on
Saturday, December 12, 1998 at 18:54:35

What: random radio chaos
frequency: any range u can tune
body: Use a strong radio transmitter, such as a cb, ham radio gear, or any
old transmitter that can saturate your area with strong rf. Put your
scanner right next to the transmitter, or better yet, put your
scanner's external antenna right next to the transmitting antenna
to overload the scanner. Usually your scanner will start recieving
many hundreds of frequencies at once. Mine seems to mostly get shortwave
radio. La voice de venezuela? If you have a cb walkie talkie with a metal
antenna, and your scanner has a built in metal antenna, try keying up the
walkie talkie and directly touch the two antennas together. My scanner
screeches incessantly. Your mileage may vary.
If you have the right adapters, you can directly connect the 50 ohm
output of a 100 watt ham transmitter to the external antenna input on
your scanner. When you key up the transmitter, you can hear the sound of
your scanner's front end being fried. On my pro-50 this was a loud POP at
about 20 HZ. Your mileage, again, will vary.

Remember, no signal is too strong.

Enjoy,
Steven

From: Michael
Topic: 20 Message: 20

Hi, group:
I've been wanting to buy a scanner for a long time, but not sure what kind I should buy. That's where I need some help from you, more experienced, scanner users. I want a programmable scanner, but one that can reach "outside" the traditional frequency ranges of most off the shelf scanners. I hear that there are some very interesting frequencies out there, but not available to the general public scanner. Whether or not that's true, is not known, just hearsay. Any help from someone out there would be very appreciated. Please feel free to reach me through my email address above, or post a response on the board for others with similar questions to get hold of. Thanks in advance.
Mike.

Mike:
Heres a quick thought: these are the bands most scanners recieve. I should know: I'm the Utah State Radio Officer.
28-54 MHz (No CB, but includes older fire radio systems, American Red Cross, Ham 6 Meter band)
108-174 MHz (No Broadcast (FM), but includes both Navigation and Communication part of Air Band, Government VHF systems, 2 Meter Ham Band, Public Safety, Commercial)
406-512 MHz (No military aircraft, but includes UHF T-Band, Public Safety, 440 Ham Band)
Thats what makes up a K-Mart (Kame Apart) scanner, such as a Uniden Bearcat.
Added Features of a Radio Shack (Radio Crap) scanner include the 800 and 900 MHz band, starting at 806, going to about 823, then up to 851 to 868, then from 896 to 956. The cell band is mostly in the range between 869 and 895. Most scanners from Radio Shack are easily used modified for Cell use.

One of the best scanners I've found out on the market right now is the Icom PC 1. Its completely controlled by computer, which you probably have if you have e-mail access, costs about as much as a nice Uniden or Radio Shack, and covers COMPLETELY 150 KHz (Long Wave, way below Short Wave), up to about 1300 MHz, which includes the Ham 50, 144, 222, 444, 902, and 1296 bands. This is an all mode scanner, meaning you can here FM, WFM (Wide Band FM is used by FM Broadcast stations in the 87-108 MHz band), AM, USB, LSB and CW (Morse Code). This is one hot radio I wish I had under my christmas tree this year. It costs nearly 350 dollars the last time I checked. For more information, feel free to go to Icom Web Page at www.icomamerica.com The page takes a little bit to load, but they have this scanner as one of the highlights. Plenty of information out there on it.

If any one has any questions, they can ask me, the Utah State Radio Office Director-in-Chief, or better known as the State Radio Officer, you can contact me at kf6lor@...

Dear Mike,
I,own a Radio Shack 2035,with 1,000 mem. channels, base or
mobile its
avery good unit for the price. It has coverage frm. 25mhz to 1300mhz.except
for,
phone freqs.
I f I, were looking for another scanner ,i, would look for
capabilities of the
following Single Sideband upper/lower, Freq.id tags(482.3375 Somerset
P.D.),Auto
search(without repeating the same freq. input over and over.
Also just a reminder ,what ever personal talk you hear ,keep it
to yourself,
many people have been hurt by rebroadcasting what they heard on there
scanner.

Here's my first time buyers advice. I haven't posted this to the site yet, but it will be there when I make my major overhaul this winter.

Rich Barron
Stupid Scanner Tricks

To buy your first scanner you need to do a bit of research first so you don't spend money on something that won't work well for you. The easiest way to do this is to buy a book (assuming you don't have a friend with a scanner that you can chew the ear of). Check your local Bookstore or Amazon.com for scanner related books for your area. You can also go to your local Radio Shack and pick up a copy of "Police Call" and a Radio Shack catalog. All of the scanner related books I have seen go over the main features of all scanners, so I won't duplicate those efforts here.

They also tend to have local information on what you may be able to hear in your area with a scanner. This is the information you want to pay attention to before buying a new scanner. The reason for this is that you may live in an area with a special kind of radio system called a Trunking (or trunked) radio system - and it may or may not be scrambled so you wouldn't be able to hear the conversation. Write down the names and frequencies of what you think you would like to hear on your scanner. Generally speaking you should be able to hear fire and police radios 20 - 100 miles from their source. Most everything else will be less (20 miles or so) After you make your list take a look at the groupings of frequencies that you have found. Some may be in the 800-900 MHz range, some may be 240 MHz area, others may be as low as 120 MHz. You will want to make a list of these ranges that you can take with you when looking at scanners to make sure that the scanner will pick up those frequencies - otherwise you have just wasted some money. Count how many frequencies you found and multiply that by 2 or 3 (as you will surely want to listen to more or may find more later) This is a good guideline for how many "channels" you want to look for in a scanner. This is how many frequencies the scaner can listen to at once without having to reprogram the scanner. If your area has a trunked radio system, see if it can be listened to with one of the newer "TrunkTracker" types of scanners. These give you greater ease of listening to these normally extremely difficult types of radio systems - but hey don't work on all Trunked Radio Systems, so try before you buy just to be positive.

The books are a good investment because they will give you all the information you need for your area that you will surely need and would take you a very long time to figure out on your own. Not only that but they are helpful in learning the ins and outs of the scanner features BEFORE you spend real money on a scanner. Plus if this is just a fad and

you are really into bullfighting in a month, you are only out about $20 for a book or two and not $200 - 400 in the hole for another paper weight.

I could say "Buy a Radio Shack Pro-5150 scanner!", but it could be totally wrong for what YOU need to do. That's why it is best to do a little research and get the right info before you make an impulse buy and end up with something you can't use or don't need.

whew!

I am enjoying the questions, etc that I am getting through this e-mail group, but how do I send one myself? For example, I have within the last year moved into a trailer and my reception has dropped to almost nothing. I know the siding on mobile homes will do this, is there an easy way around this? It was disheartening after moving from less than a mile away from a repeater where we could hear almost anything into a mobile home park where we hear almost nothing! Ideas please!!!!!!!!!!

What you could do is get an antenna with some type of mount and place it on the top of your trailer. Then run a 75-ohm cable from the antenna to the scanner. That way, the antenna's reception will not be affected by the insulation on the trailer. Also, it helps if you post what type of scanner you have, like a base,mobile, or handheld.

Andy,
I don't have the ICOM scanner but since you are interested in PC programmable scanners, you might want to look at the Ten-Tec RX-320 PC scanner at http://www.tentec.com They make good (but expensive) ham radio trancevers and the rx on those is great and sensitive. Hope you find what you are looking for.

To: rbarron@...

Below is the result of your feedback form. It was submitted by () on
Sunday, December 27, 1998 at 10:18:34

What: security alarms
frequency: k-marts ect,
body: wander thru the elctronics dept, find the small packages with
security tape on the back of them remove them then either A: place them
on the under side of a shopping cart thats unattended, blocking your
isle, simply bend down to look at something near the floor and stick it
to the bottom side of the cart,
B; lay the strip on the floor sticky side up,

watch security stop all the unsuspecting shoppers pushing the cart load
of goodies out the door, or simply walking out with a strip on their
shoe,,,,,,,,,

a number of twisted ideas can be moving thru your minds by now involving
who can be had using small white magnetic strips

ok so its not a scanner trick but it can be fun to do.

What: Fast Food
frequency: 30.84 or VHF low band
body: If you find one of those simplex freqs. on 30.84 or in that area.
Using an RCI-2950 or similar transceiver, you can wreak havoc or totally
mess with someone's mind that has the headset on.
Example, I have had considerable fun with some of the employee's at
krystal's on my RCI-2950 :-)

I'm not shure of the meaning of your question. The other one have answer by
the phonetic alphabet, it's right!

But Papa, the letter P, the signification is FATHER, like DAD...

Happy new year !

52. [SST] Highway Zappers source?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1998-12-30 16:57:45 UTC
From: Rich Barron
Topic: 52 Message: 52

I've been getting a few people looking for Highway Zappers based on that part of the SST website. Unfortunately, the sources listed aren't selling them anymore. Does anyone have a source for these 10 GHz radar detector foolers?

If you aren't aware of what they are, they are a little remote control like device that will set off a radar detector in someone elses car up to a few hundred feet away. They think there is a cop and slow down.

Rich Barron
Stupid Scanner Tricks

PS - We've got about 200 people on the list so far!

What: wireless doorbells
frequency: two types
body: There are at least two types of wireless doorbell; One that
operates around 300 Mhz and one that transmits on 27.145Mhz. These freqs.
are for Australia, however I cannot see any difference in other places. I
don't know the advantages of listening to your neighbours front door,
save for the fact that I have no life! For
another cool trick try listening to 303-304 Mhz. Here you will find the
most common transmit freqs. for automotive car alarms with radio remote
controls. What sort of carange you can cause,if you apply the
superhetrodyne principle here, is unknown. However, watching hundreds of
people scrambling to their cars on a busy shopping day, would be an
amusing sight to say the least. This is a cool
sight. Keep up the good work

68. [SST] What happened?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-01-01 01:24:40 UTC
From: Tom Simpson
Topic: 68 Message: 68

Did someone do something to offend everyone? I've only been on this list for a couple of months (mostly as a lurker) but I really enjoy some of the things that I have recieved. Please do not remove me from the list.
I belong to a few other groups that I get over 150 posts per day. It usually takes me about ten to fifteen minutes to download all of my mail. The amount of people posting to this group is in no way too many.
I actually don't own a scanner anymore, but I was very into it, a few years ago. I'm still a ham radio operator, so I love the radio hobby.
Some of the posts, here, have been very interesting. I never would have thought about trying to aquire my oun radar gun, until I saw the information from yesterday.
Anyway, I hope to hear more from this group, in the future. Later!
Tom

Howard Johnson is right!!!! By the way, will someone
less clumsy with the DELETE key than myself please
give me the email address of that electronics site
where radar guns may be purchased?

what I think is going on is normal.... I have been on several mailing lists in their starting phase.... sometimes people sign up for a mailing list not really knowing what it is...so when they find out it is just a bunch of us guys and gals sitting around posting info to eachother, they decide they don't want it anymore.... don't worry guys.... the list will go on... :o) as far as the website for purchasing a radar gun, I am not exactly sure what it might be....I have a radar gun, I got mine for $75 very used at a ham fest in Lima Ohio..... these ham fests are a great place to get discount odds and ends..... :o) well untill next time....HAVE A HAPPY NEW YEAR!!! happy scanning

Dear Group,
as his man said, why is suddenly everyone leaving?
Also, if you remeber, when you first joined this list, there was a certain word you were supposed to type in the subject line to remove your self from this list!
The first e-mail you got had this information.

I don't know where you are getting all of these e-mails in this list. I have recieved the majority of the messages on this list in the past two days, and 90% of them are people asking to be unsubscribed. If you don't have time to read or keep up with all of these unsubscribe requests, then push that little button that says "Delete". Why have people subscribed to this list, in the firs place?
Well, I guess it will be a better place if we get people on here that really want to be, anyway! The idea of being on a list is to actually get mail from the list.
Hi.Hi.

you know i am getting tired of seeing all of these " please remove me from your list" e-mails
I really enjoy reading the new things that people come up with to do with a scanner .
today i had like 48 new messages and abot 47 were people saying " please take me off your mailing list" all they have to do is type in a certain word and e-mail it backto the list. it's that simple!!!
Check your first e-mail that you got from the group and in that little letter is the key word that you can use to unsubscribe yourself from the group!!!!
or if you are not that smart you can think about it for a little bit and figure out the word and type it in, it is not that difficult people!!!!
But anyways i really enjoy this group and i think that we ned to figure out who the gu thet says " if you don't remove me from this list then i will have to do something bad to you in the list." get it dip????
This guy needs to GET A LIFE VERY BADLY!!!!!

To: rbarron@...

Below is the result of your feedback form. It was submitted by () on
Thursday, December 31, 1998 at 22:27:00

What: voice mail
frequency: 500-600
body: How do I do it? Sorry, I haven't a clue. All I know is that
occasionally while I'm just scanning through the 500-600 MHz range, I'll
hear a loud beep (like an answering machine) and somebody will leave a
message to somebody. One person after another, and the messages are going
to different people.
I'm guessing its some kind of voice mail service. I can't always find it.
But its interesting to listen to when I can. I tried to find out where
these messages are coming from, by listening to the phone #'s. They're
coming from everywhere. Anybody know what exactly this is?

I want a hand held scanner but not sure what to get. Will someone give me
advice?
I wanted to spend less than 250 but i want quality too. Also, some1 told me
that
you cant listen and scan frqs. on them but isn't that the point??? Anyways,
will
someone give me a basic start on hand helds???

PS. Shut up about the unsubscribing crap

Oh yeah... I already own a scanner....

113. [SST] Last Word: Getting Off The List

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-01-02 04:49:12 UTC
From: Rich Barron
Topic: 113 Message: 113

This is the LAST POST on getting off the list. Consider this thread dead. Back to Scanning stuff. OK?

If you do not want to get all the e-mails this list generates, take a deep breath and try these things in this order:

1) go to:

http://www.eGroups.com/list/stupidscannertricks

This is not the Stupid Scanner Tricks page. It is a seperate page that has some pretty nice features. (Calendar, on-line poll, etc.) One of the main reasons I picked e-groups is because of these nice features. Click the MODIFY button to change your individual settings.

The best one is the DIGEST feature. You have 4 methods of getting the messages from this list. The default is individual e-mails. That will throw every message from the list to your inmail box and get you all huffy (well, some of you who are now gone! :)) You can also choose a dily summary or full text digest. This will take either the subjects and first sentence (summary) or the entire messages (full text digest) and compile the entire days worth of messages into one (yes one) e-mail message. This is what I use for a number of mail lists I am on. I still get all the info, but I don't have 150 messages a day to sort through. Every person who asked to be removed from the list was set to individual e-mails. Move to a digest mode and see if that helps (it will) because you probably enjoy the information on the list as most people do, but don't like the bulk of a lot of messages sent to you every day. This soves both problems.

2) If you still don't want the digest sent to you, there is another option available at the website: "Read it on the web". Just what it states. You go to the website (above) and read the messages on the web. Since you are still subscribed you can post messages at the website just like you would from your e-mail program. If you are not subscribed you can only read the messages on the web - not post new ones or take part in other fun stuff on the e-groups site.

3) If your ex-wife signed you up to this list and you are a entemologist in South Africa and have no use for this list whatsoever, you can unsubscribe yourself IMMEDIATELY two ways - neither of which involves me or posting to the group. You can go to the website above (don't worry, it's posted at the bottom of every message so you won't forget), click the modify button, and click UNSUBSCRIBE. You can also send a message (blank if you like, nobody will read it) to "stupidscannertricks-unsubscribe@egroups.com" . This is also in the site subscription notice you get when you sign up, and I'll probably add it to

the Stupid Scanner Tricks website where you first saw the subscription form.

So! Quick Review. 1) Go to website http://www.eGroups.com/list/stupidscannertricks and select digest mode or read on web. 2) if that doesn't make life peachy for you, unsubscribe by sending a blank message to stupidscannertricks-unsubscribe@egroups.com or from the website where you set the digest mode.

The changes go into effect immediately, you get what you want, I don't have to hand hold anyone, and the list stays on topic.

Rich Barron
Stupid Scanner Tricks

PS - Sorry about the profanity in a recent post. That member has been removed from the list.

I have an old
SBE OPTI*SCAN
MADE BY
Linear Systems, INC.
Watsonville, CALF

It uses a plastic card that you pick numbers off of for the channels.
Worked well back then. Moved several times sence. Need new cards.
Anyone ever heard of them or know if they are still around?
Tried the internet search for the business, no luck. Will keep searching.

Where can I get the data cable for my BC 895 XLT Trunk Tracker, or at least the connector for the scanner end so I can make my own cable.

Does Radio Shack have the connector?

Thanks,

Bill

Well, I have 3, an Icom IC-R10, which I think is the BEST handheld
ever made, a Uniden UBC3000XLT, and an old PRO-2003...
The 3000 isnt too bad, but the Icom out-performs it something cronic,
but the only thing on my wish list for the Icom would be the same
scanning speed, (the 3000 does 100 channels per second!!).
Anyway, theres my input :)

Mike

They went out of business about two or three years after they made the scanner. It and the Wammo by Bearcat were about the only two programmable scanners for a few years.

HEY THERE! SORRY IT'S TAKEN ME SO
LONG SENDING AN E-MAIL TO THE GROUP.
FOR XMAS I BOUGHT MYSELF A UNIDEN
BEARCAT BC60XLT-1 PROGRAMMABLE HAND
HELD SCANNER.
I'M REALLY MORE OF "AN RF JUNKY" WHEN
IT COMES TO CB RADIOS,BUT TIL ABLE "TO GET A STATION UP",I'M GETTING
"INTO "
THIS.
I'M HOOKED WHEN IT COMES TO SURFING
THE WEB,BUT IT'S FUN TOO! THE PAST FEW
DAYS I'VE FOUND ALOT OF WEB SITES FOR
FREQUENCIES & THOUGHT I'D PASS THEM ON
TO THE GROUP.HERE'S WHAT I'VE FOUND:
1.NATIONAL FREQUENCY DATABASE
2.PERCON FREQUENCY DATABASE
3.SCANNER.NET
4.SEARCHING/EXPLORING THE INTERNET
http://www.qst.directoryguide.com/
5.FEDERAL COMMUNICATIONS COMMISSIOM/FCC
http://www.fcc.gov
WHEN YOU GET A CHANCE CHECK 'EM OUT,
ALOT OF INFO CAN BE FOUND THERE.
HAPPY NEW YEAR TO EVERYONE,
meannlean620@...

124. [SST] WWW Form Submission

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-01-03 03:40:47 UTC
From: Rich Barron
Topic: 4 Message: 124

Subject: WWW Form Submission
Sent: 1/5/19 2:53 AM
Received: 1/2/99 8:33 PM
To: rbarron@...

Below is the result of your feedback form. It was submitted by () on
Saturday, January 2, 1999 at 19:38:51

What: California Highway Patrol
frequency: 154.905
body: The C.H.P. patrol cars have what is called an AVR. It is an
Automatic Vehicular Repeater. When an officer stops a speeder or
whatever, he/she activates the AVR (CHP normally uses Low-Band vhf 39-43
Mhz) using 154.905 simplex repeater. It makes a clicking sound while the
base is talking to the officer(a very short recieve period in the AVR)
incase the officer needs to interupt the car's transmision being repeated
from the car"s two-way radio. When the officer talks into his handheld
also on 154.905, the AVR repeats his transmision back out the car's
two-way radio back to the dispatcher or other cars. The AVR and the
handheld radios are about 100 mw range (.1 watts) and have attenuated
recievers to be used for short range only.
If you are within a mile or two you can pick up these transmisions if
the officer has the AVR on and is using it. The thing is some of the
officers leave it on after a stop and if you pick up the transmisions it
will warn you that an officer is near by!! Try driving by a CHP
Headquarters to see how it sounds, at least one car has been left on and
should be heard for a few blocks around... Be advised this always doesn't
warn you if an officer is near by, but it can help and sometimes you can
get information on traffic problems and various accidents too.

From: Marc Abrams
Topic: 128 Message: 128

HI, everybody!

I'm new to this list and I've got a question regarding antenna length. I'm currently using a telescoping whip antenna optimized for Rail frequencies (160-162). Is there a simple formula that will tell me the length I should be using for other frequencies (like the CB bands)?

Thanks in advance.

Marc

Does anyone know what the best scanners on the market are. I am looking for complete coverage in a hand held model.
Also I need to know what is the best antenna for receiving the 46/49 Mhz band is.
and where best prices to get these things are at.

Sure, By conversion, wavelength is expressed in "meters" One meter = 39.37 inches or divided by 12 (or a foot) = 3.281 ft.

To get this just divide 300 by the frequency you wish (160mHz) = 1.88meters or 6.168 ft. For a fullwave antenna or divide for the right size. Example 6.168 divided by 2 = 3.084 ft which is a halfwave antenna.
It is simple, just do the math.
Hope this helped

For a half-wavelength
468 divided by frequency in MHz

for quarterwavelength
234 divided by frequency in MHz

Make sure you us the FREQUENCY in the CB band
NOT the channel

YES there is, however some of the replies sent to the reflector have been WRONG.

for CB, 108 inches is a quarter wave.

formula is 468 / MHz = 1/2 wavelength in feet.
or
234 / MHz = 1/4 wavelength in feet.

Well, I own an Icom IC-R10, and it simply KICKS ARSE!
As to where u might get one, I have no idea, as I am in Australia
mate...
It covers 0.5 - 1300 MHz, and it has FM, WFM, AM, USB, LSB & CW.
Its performance on HF is fantastic for a handheld, and its performance
above 800 MHz is fantastic.

the 102" Whip antenna is designed to work without the spring. the spring was made 6" for a reason. I can't remember the exact
explanation for the figure, but when installing the coax between the radio and the antenna you always increase or decrease the length in

multiples of 3".

the true length of an antenna for channel 1 (27.005) is 103.98"
channel 40 (27.405) is 102.46"

When you buy an antenna to be used with a CB, the antenna is designed to be 102". Keeping in mind that the length of cable attaching the radio to the antenna does contribute to the performance of the system.

Not so, Brian. That's an old myth. The length of the cable attached to a CB antenna has almost no effect. Maybe I just understood your post the wrong way, but the only way the cable will have any kind of overall performance loss is if you are using an extended length (100ft.+). This will come as a loss in the overall signal output (dB). The only part of an antenna system that "needs" to be the correct length (at this frequency) is the antenna.
We all hate that little popping sound when it's not, huh?

police codes vary from city to city and state. I use a completely different
set of codes than the local and county Agencies. So it varies.
If you are in the state of FL. I can give you all the FHP codes.

It depends on the Department/service you are listening to.

Columbus, Oh PD. 10-11 = Check for stolen
10-34 = Unknown complaint

Allen County, Oh PD. 10-11 = Prowler
10-34 = Yes

and the list goes on and on.

179. [SST] Advertizers wanted

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-01-03 03:58:42 UTC
From: Rich Barron
Topic: 179 Message: 179

The Stupid Scanner Tricks website is looking for advertizers to sponsor
the site and help spawn the next generation Stupid Scanner Tricks website.

The website generates over 420 hits a day from over 150 links to the 3
year old site. The visitors are bright, technologically minded
individuals with an interest in radio communications.

Details:
Our monthly advertizing rate is $100 for a main page banner with a link
to your site. This works out to an approx. $8 cpm (cost per 1000)rate for
the ad.
Other pages on the site are $50 each. An incredible $4 cpm!

If this matches your target audience or advertizing budget in whole or in
part, contact Rich Barron at rbarron@... .

181. [SST] Re: pro-90

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-01-11 03:47:58 UTC
From: Tom Simpson
Topic: 181 Message: 181

The PRO-90 does pick up "amplitude modulated" and "frequency modulated"
signals. If you're talking about AM/FM broadcast signals; no, it does not.
Examples:
Aircraft frequencies (108-136MHz) are AM
Public service (173-174MHz) are usually FM

Some scanners are capable of allowing you to change the "mode" that you
recieve on (ie:156.750MHz in AM) but most will not.
Hope this helps.

184. [SST] Re: Antenna Question

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-01-11 04:49:45 UTC
From: PegLegDXer@aol.com
Topic: 182 Message: 184

In a message dated 1/10/99 11:22:00 PM CDT, Tt676tt@... writes:

> What is the best antenna to buy for receiving 46/49 frequencies. Are longer
> better ?
> I have a handheld bearcat 200xlt that I am using. thank you.
I use a radio shack "all band" antenna I bought for 30 bucks, I can hear 46/49
MHz for five to eight blocks easy. I am pleased with the antenna.
Also the antenna is at 22 ft above ground level, I can pickup VHF and UHF
for cities up 75 miles away.

186. [SST] How To: get off this list

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-01-11 05:28:58 UTC
From: Rich Barron
Topic: 186 Message: 186

Quick Review. If you want to reduce or eliminate the mailings from this list

1) Go to website:
http://www.eGroups.com/list/stupidscannertricks
and select digest mode or "read on web".

2) if that doesn't make life peachy for you, unsubscribe by sending a blank message to:
stupidscannertricks-unsubscribe@egroups.com
or from the website where you set the digest mode.

The changes go into effect immediately, you get what you want, I don't have to hand hold anyone, and the list stays on topic. For more details go back to my website at:
http://exo.com/~rbarron
and read the details about the list in the recently added link marked with the big bold letters that say "More list info here. Please read about digests and unsubscribing."

Hi,

You might want to try a search engine for frequencies for your state
such as, altavista.digital.com. Type in Police scanner frequencies for
Westchester County in New York. It will pull up pages to look up for
the frequencies you are looking for. Hope this helps.

Sandra

From: Celeste
Topic: 201 Message: 201

I recently inherited a NordeMende Globetraveler II radio/receiver. It has the usual AM/FM stuff but also offers others bands. I know the MB band is the marine band (I think -- is that right?), but what are the SW bands... they are very low numbers and when I scan through them I have heard Russian, Japanese, Spanish and French broadcasts. What does SW stand for? Also, are there any transmissions other than radio station broadcasts that can be picked up with any of these bands and frequencies?

Thanks for your help!
Celeste

The Bearcat 9000XLT is a very good scanner.
I worked at a central station (alarm) and used this
to monitor local and other county traffic. As with any
scanner (receiver) you must use an outside antenna
to achieve best results. I believe we used an
Antenna Specialist Mon31 tri band and it worked very
well. Also used #9913 cable between antenna and
the receiver. Best cable for UHF and higher frequencys.....

208. [SST] sw

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-01-15 05:02:47 UTC
From: Philip Humes
Topic: 208 Message: 208

SW means Short Waves. It is generally the band of frequencies in the HF (High Frequency) region of the spectrum. HF freqs are 3-30 mHz.

Things you can hear......If it has a BFO (beat frequency oscillator) that will allow you to listen to SSB (Single Side Band). The Army, Navy, Air Force, Marines, and Coast Guard use these frequencies for long range communicastions.

In upper side band you can tune:
8989 kHz McClellan Airways (California)
9393 kHz Ellmendorf Airways (Alaska)
6761 kHz Sierra 391 Fuel Artanking in the aikr
8984 kHz USCG, San Francisco, San Diego and others

HF is used for long range communications for Air Control.

And of course, there is International broadcasters. To find those frequencies, I reccommend the book PASSPORT TO WORLD BAND RADIO. It is updated annually.

Hope this helps you some.

222. [SST] too much e-mail? Read this.

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-01-18 19:13:13 UTC
From: Rich Barron
Topic: 222 Message: 222

If you do not want to get all the e-mails this list generates, take a deep breath and try these things in this order:

1) go to:

http://www.eGroups.com/list/stupidscannertricks

This is not the Stupid Scanner Tricks page. It is a seperate page that has some pretty nice features. (Calendar, on-line poll, etc.) One of the main reasons I picked e-groups is because of these nice features. Click the MODIFY button to change your individual settings.

The best one is the DIGEST feature. You have 4 methods of getting the messages from this list. The default is individual e-mails. That will throw every message from the list to your inmail box and get you all huffy (well, some of you who are now gone! :)) You can also choose a dily summary or full text digest. This will take either the subjects and first sentence (summary) or the entire messages (full text digest) and compile the entire days worth of messages into one (yes one) e-mail message. This is what I use for a number of mail lists I am on. I still get all the info, but I don't have 150 messages a day to sort through. Every person who asked to be removed from the list was set to individual e-mails. Move to a digest mode and see if that helps (it will) because you probably enjoy the information on the list as most people do, but don't like the bulk of a lot of messages sent to you every day. This soves both problems.

2) If you still don't want the digest sent to you, there is another option available at the website: "Read it on the web". Just what it states. You go to the website (above) and read the messages on the web. Since you are still subscribed you can post messages at the website just like you would from your e-mail program. If you are not subscribed you can only read the messages on the web - not post new ones or take part in other fun stuff on the e-groups site.

3) If your ex-wife signed you up to this list and you are a entemologist in South Africa and have no use for this list whatsoever, you can unsubscribe yourself IMMEDIATELY two ways - neither of which involves me or posting to the group. You can go to the website above (don't worry, it's posted at the bottom of every message so you won't forget), click the modify button, and click UNSUBSCRIBE. You can also send a message (blank if you like, nobody will read it) to "stupidscannertricks-unsubscribe@egroups.com" . This is also in the site subscription notice you get when you sign up, and I'll probably add it to the Stupid Scanner Tricks website where you first saw the subscription form.

So! Quick Review. 1) Go to website
http://www.eGroups.com/list/stupidscannertricks and select digest mode or
read on web. 2) if that doesn't make life peachy for you, unsubscribe by
sending a blank message to stupidscannertricks-unsubscribe@egroups.com or
from the website where you set the digest mode.

The changes go into effect immediately, you get what you want, I don't
have to hand hold anyone, and the list stays on topic.

Hi, I have had a BC 9000 for about 6 months. It's very good but I could not recieve
cell the 800 Mhz band has been locked out. "as with all new scanners"
could not find anyone willing to modify it. So I sold it & got a pro 2006
this is the radio you definitely want if you have to have it all !!
You could try getting the UBC 9000XTL it's Canadian, but its the same as the
9000. If you need more info e-mail me Jim. riverben@...

Thank you, Your support is appreciated. It would help us all if everyone would keep the unsubscribe/digest info handy to mail back to the people who don't know what to do. I don't read all the messages as soon as they come in and the list gets hit with remove requests.

If a few people would e-mail the people asking to be removed how to do it, it will head off a few problems. Today one of our REMOVE friends on webTV sent 60 remove requests to the list. Luckily e-groups filters out duplicates so the list doesn't get bombed. Then they forward them all to me, so I get bombed :(

I'm a nice guy. I run a nice list. Sometimes for morons.

You know, yesterday, when I recieved the letter with instructions on how to be removed from the list, I thought it rather crude that it was followed by several letters proclaiming how stupid some people must be. Now, after reading this last letter, I wholeheartedly agree. Keep up the good work, I'm enjoying it all.
Thanks

For starters I just want to say I love reading the messages that are
posted here and hope someday all the stupid people in the world will
quit posting remove messages!

I just email MikeRay5@... and DAROCCK@... how to be removed.

Also I will continue to tell these idots how to be removed as they post
there messages, by forwarding the message that Rich Barron wrote and
posted.

The message that I sent to them was as follows:

246. [SST] Re: REMOVE

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-01-20 05:41:53 UTC
From: Popzo2@aol.com
Topic: 219 Message: 246

This is perhaps the second email I got with REMOVE in the subject field followed by a single word; no. Am I missing something here? This is starting to get funny (or very pathetic). I don't know how much more of this I can take, and when I reach my limits with the nonsense here, I may be forced to ask... "How can I get removed from this list?" Thanks for the hours of amusement, guys. PoPzo

MY AMAZING E-MAIL HAS A DELETE BUTTON. I LOOK AT ALL THE E-MAIL AND THEN
DELETE THAT WHICH DOES NOT INTEREST ME. HOWEVER, SEEING THE INFO ON HOW
NOT TO EFFECT REMOVAL OF ONE'S NAME FROM THE LIST IS TIRESOME. BESIDES,
IF IT WERE NOT FOR SOME OF THIS E-MAIL, I AM SURE THAT SOME FOLKS WOULD
HAVE NO MAIL AT ALL. AT LEAST, THIS LETS YOU KNOW YOUR E-MAIL PROVIDER
IS DOING HIS JOB.

Listed are a few things that one can listen to other than government:

Taxies:Their freqs are paired duplex frequencies in the 152 and 157 mhz
range.

Telephone maitnance service 451.175 to 462.525 in 25 mHz steps

Remote Broadcast pickup: 450.000 mHz range.
KGO San Francisco Aircraft 450.4625
KZST Santa Rosa "Capt. Jeff" 450.500
do a search for your area.

Tow Trucks ? AAA: 150 & 151 mHz

GoldenGate Bridge & Transportation District
Coach Common 482.3875
Coach, Even Numbers 482.5375
Coach, Odd numbers 482.6875
Bridge Operations 482.7375
Supervisors 482.8375
Ferry ops. Communications 482.5875
Paint crews 151.115

Highway emergency call boxes. Some of them use cellular freqs. Those
that do not use the following freqs: 453.025, 453.075, 453.125,
453.175

Enjoy

253. [SST] Most exciting event...

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-01-20 08:11:31 UTC
From: Tom Simpson
Topic: 253 Message: 253

I was just recalling some of the most exciting things that I've heard on my scanners, over the years. Just wondering if anyone else wants to share theirs.
Over the eight years that I was heavily into scanning, there were three events that come to mind as the most exciting. (I lived in Loveland, CO at the time) The first was a point blank murder at a party on 4th street. The second was another shooting by a patient that shot the nurse that came to visit him in his home, one Sunday.
The third required a stupid scanner trick:
Boy from Cheyenne stole his dad's semi tractor, drove down I-25, got to Loveland before the police forced him off the road. I know I'm not supposed to repeat anything, verbaitum, so I'll leave it at that.
Anyway, at the time, I had two scanners. I was trying to listen to five different public service frequencies, and catch the cell phone conversations, at the same time. Using an attenuated patch cable, I was able to record the public service channels off of one scanner and keep searching the 800's with the other. (Had most of them set up, already, but still needed to pay attention). With the recording, I could go back through the frantic shouts of "shots fired" and still hear what was happening in real time. Anyway.....
Boy what I would have given to have a few more 20 channel scanners.
I'd like to hear of some other "tricks" that people use, though.
Let's try to get on topic.

My Secret Service list is huge so I sent some of what I have directly to your e-mail address. Wasn't sure whether to deluge the group with it all. Especially since people are so sensitive these days about getting scannergroup mail... If anybody wants, please advise and I will send to group or you personally.

By the way, this group, its true enthusiasts anyway, have helped me a lot and I enjoy every bit of information I get on the group subject. The "get me off the list" stuff is tiresome and juvenile, but easy to ignore. "DELETE" Just wanted to thank the group and those who run it and those of us who participate and give and glean info.

Subject: [SST] Secret Service Frequencies

My Secret Service list is huge so I sent some of what I have
directly to your e-mail address. Wasn't sure whether to deluge the
group with it all. Especially since people are so sensitive these
days about getting scannergroup mail... If anybody wants, please
advise and I will send to group or you personally.

By the way, this group, its true enthusiasts anyway, have helped me
a lot and I enjoy every bit of information I get on the group subject.
The "get me off the list" stuff is tiresome and juvenile, but easy to
ignore. "DELETE" Just wanted to thank the group and those who run it
and those of us who participate and give and glean info.

~Celeste

Mc Donalds on Scanner?

Well try this out...

Go to: http://www.yahoo.com

Once in Yahoo type in frequencys

I remember I saw a whole lot of frequencys for Mc Donalds for the
scanner radio... I think that was the way I did it.

From: Popzo2@aol.com
Topic: 277 Message: 277

Anyone with any information about modifications that can be performed on this antiquated scanner to enable me to increase its ability to scan additional frequencys?
Also, if any techs out there have had problems with the squelch circuit in this rig, particularly popping noises at the squelch point, and can offer any insight, it would be greatly appreciated.
Thanks much,
Anthony aka PoPzo2@...

I am a Firefighter here in Ottawa OHio, and I am wondering if any of you guys know anything about how the disater sirens in towns like mine work.... for instance we get dispatched to a fire, and after that, I hear different tones...I was wondering if the second set of tones I hear on my pager set off the sirens or not.... I know they go off, but not sure if they are controlled by remote, or if there is hardwire all the way to the dispatcher...

Thanks
Andy

JIM,
GET A LONG EXTENSION CORD AND PLUG IN YOUR SCANNER. USING THE SEARCH
FUNCTION FOR EACH OF THE BANDS CARRY THE SCANNER AROUND THE HOUSE. IF
YOU HEAR A SQUEAL LIKE FEED BACK MOVE YOUR SCANNER TO THE POINT WHERE IT
IS LOUDEST. THIS ONLY WORKS FOR ACTIVE RF TRANSMITTERS. MOST ARE FOUND
IN THE LOW BANDS UP TO VHF. IF IT'S THE US GOV, YOU CAN ALSO FIND THEM
IN THE 1 GIG TO 2 GIG FREQS,
THE BEST ADVICE IS NEVER SAY ANYTHING ON THE TELEPHONE THAT YOU WOULD
NOT WANT YOUR MOTHER TO HEAR.
VINCE

better to search with a frequency counter since you probably don't know what band to search. if you have an idea which band, put scanner in search mode xx-xx.

i work at McDonalds over in Western Australia our frequency for our headsets/drive for franchise stores is 35.0200 but im not sure what it is for mcopco stores (company) anyways, all the mcdonalds stores have to antenas that stop the signal from leaving the stores radius, so the only way u can hear it is if you are about 10 metres away from the store.

What is the freq. ranges of all analog cell phones?
What is the best antenna for a handheld bearcat 200xlt for use in a house, for ranges 40-50, 800-956?

333. [SST] reminder: to get off this list

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-01-29 20:49:41 UTC
From: Richard Barron
Topic: 333 Message: 333

If you do not want to get all the e-mails this list generates, take a deep breath and try these things in this order:

1) go to:

http://www.eGroups.com/list/stupidscannertricks

This is not the Stupid Scanner Tricks page. It is a seperate page that has some pretty nice features. (Calendar, on-line poll, etc.) One of the main reasons I picked e-groups is because of these nice features. Click the MODIFY button to change your individual settings.

The best one is the DIGEST feature. You have 4 methods of getting the messages from this list. The default is individual e-mails. That will throw every message from the list to your inmail box and get you all huffy (well, some of you who are now gone! :)) You can also choose a dily summary or full text digest. This will take either the subjects and first sentence (summary) or the entire messages (full text digest) and compile the entire days worth of messages into one (yes one) e-mail message. This is what I use for a number of mail lists I am on. I still get all the info, but I don't have 150 messages a day to sort through. Every person who asked to be removed from the list was set to individual e-mails. Move to a digest mode and see if that helps (it will) because you probably enjoy the information on the list as most people do, but don't like the bulk of a lot of messages sent to you every day. This soves both problems.

2) If you still don't want the digest sent to you, there is another option available at the website: "Read it on the web". Just what it states. You go to the website (above) and read the messages on the web.
Since you are still subscribed you can post messages at the website just like you would from your e-mail program. If you are not subscribed you can only read the messages on the web - not post new ones or take part in other fun stuff on the e-groups site.

3) If your ex-wife signed you up to this list and you are a entemologist in South Africa and have no

use for this list whatsoever, you can unsubscribe yourself
IMMEDIATELY two ways - neither of
which involves me or posting to the group. You can go to the website
above (don't worry, it's
posted at the bottom of every message so you won't forget), click
the modify button, and click
UNSUBSCRIBE. You can also send a message (blank if you like, nobody
will read it) to
"stupidscannertricks-unsubscribe@egroups.com" . This is also in the
site subscription notice you get
when you sign up, and I'll probably add it to the Stupid Scanner
Tricks website where you first saw
the subscription form.

So! Quick Review. 1) Go to website

http://www.eGroups.com/list/stupidscannertricks and select digest mode
or read on web. 2) if that
doesn't make life peachy for you, unsubscribe by sending a blank
message to
stupidscannertricks-unsubscribe@egroups.com or from the website
where you set the digest mode.

The changes go into effect immediately, you get what you want, I don't
have to hand hold anyone,
and the list stays on topic.

From: MalachiQ@aol.com
Topic: 337 Message: 337

Hi ya all. I am kinda new to the list, but I am not new (As most of you are) to the scanning sector. But there are some frequencies that I have been unable to come across in the years I have beeeeeeeeen scanning (Darn sticking e.....). I hope you all can help me out, and in turn, I will help you out in any way shape, or form.

I am looking for the following:

Toledo Police frequencies (Active [particularly the NW or W sectors])
Toledo Fire And Rescue Frequencies (Active [particularly the NW or W sectors])
Toledo Public Schools
Toledo 11 The News Channel "Chopper 11"
Any other interesting frequencis in the Toledo area

And in Southeast Michigan:

Whiteford Volunteer Fire Department
Bedford Volunteer Fire Department
Any other Volunteer Fire Departments in the Monroe or Lenawee County area

I appreciate your help!!

Mike

There are a few modifications that can be done to that model, but none
that are of much value except that it can be made to receive cellular
phone frequencies. You may already have that one. If not I can get it
for you.

From: Alain Lafleche
Topic: 364 Message: 365

Hi!

It's probably that you use a scanner that decode in narrow fm (like regular service...police, fdp, ...) but a wireless mike are in Wide Fm..... the tx band is more larger than a narrow signal, your scanner can decode correctly these frequencies....

Most wireless mikes by Telex and Shure cover the area of the band
starting about 188 megs all the way up to about 215, well above the
coverage of more Radio Crap (Hack) scanners.

Does anyone have mods or tricks for Radio Shack PRO-2041. I also have a Uniden BearCat 860XLT.

I receive cellulars on my bearcat but I don't on the PRO-2041 since it is triple conversion. It would be nice to listen to all on my PRO.

Dennis

This might help you out. I found it in my saved stuff from this list.

Steve Weber

Quick Review. If you want to reduce or eliminate the mailings from this
list

1) Go to website:
http://www.eGroups.com/list/stupidscannertricks
and select digest mode or "read on web".

2) if that doesn't make life peachy for you, unsubscribe by sending a
blank message to:
stupidscannertricks-unsubscribe@egroups.com
or from the website where you set the digest mode.

The changes go into effect immediately, you get what you want, I don't
have to hand hold anyone, and the list stays on topic. For more details
go back to my website at:
http://exo.com/~rbarron
and read the details about the list in the recently added link marked
with the big bold letters that say "More list info here. Please read
about digests and unsubscribing."

Topic: 378 Message: 378

Hello everyone,

I have been a member of the group for quite some time now and havn't had the nerve to e-mail everyone.
My question is does anyone Know mods for the R.S. pro 2042 w/o the optoelectronics interface it's I plan to get it but it is kind of steep, besides i like tinkering with my radios anyway. anyone please e-mail me back with idears.

Thank you all.

P.S.: Rich I love the group keep up the mavoulous(spectacula)work.

David ref the pro 2042 the only mod I know of is the Cellular Mod and that is a maybe. Depending when it was made. The first 4 months that it was made there is a mod or but after that no mod.

All in this available at
www.http://members.xoom.com/scancentre/mod.html

It is worth it for all scanner people to bookmark. Is a great site.

Snip the bare lead of diode D502.
If the spot for D501 is empty, add a diode there to speed up the scan
rate.

Date: 1999-02-04 06:34:12 UTC
From: DAVID FAULK
Topic: 134 Message: 403

Hello all,
Me again I had one question to the group. I went on the roof of my building in New York city where i live and found a television antenna (I guess) there with the coax cut and seemingly no one was using it. I am putting an 18 foot 10-12 meter antenna up there and was wondering if I could use this television antenna w/ my pro-2042 or my hand held pro-64. Any idears would be greatly appreciated.
Also I wanted to know if I could crimp the cut coax on the antenna and make one cable w/o a break.

Big scanner fan,
F<x>

P.S. Rich who loves ya babe?

I have a BC200XLT and for handheld use I use a center-loaded telescoping ant. from Radio Shack, item 20-006, sells for 9.99 plus tax. Works real well.

421. [SST] How to: get off list/cut down mail

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-02-05 07:25:52 UTC
From: rbarron@exo.com
Topic: 421 Message: 421

If you do not want to get all the e-mails this list generates, take a deep breath and try these things in this order:

1) go to:

http://www.eGroups.com/list/stupidscannertricks

This is not the Stupid Scanner Tricks page. It is a seperate page that has some pretty nice features. (Calendar, on-line poll, etc.) One of the main reasons I picked e-groups is because of these nice features. Click the MODIFY button to change your individual settings.

The best one is the DIGEST feature. You have 4 methods of getting the messages from this list. The default is individual e-mails. That will throw every message from the list to your inmail box and get you all huffy (well, some of you who are now gone! :)) You can also choose a daily summary or full text digest. This will take either the subjects and first sentence (summary) or the entire messages (full text digest) and compile the entire days worth of messages into one (yes one) e-mail message. This is what I use for a number of mail lists I am on. I still get all the info, but I don't have 150 messages a day to sort through. Every person who asked to be removed from the list was set to individual e-mails. Move to a digest mode and see if that helps (it will) because you probably enjoy the information on the list as most people do, but don't like the bulk of a lot of messages sent to you every day. This soves both problems.

2) If you still don't want the digest sent to you, there is another option available at the website: "Read it on the web". Just what it states. You go to the website (above) and read the messages on the web. Since you are still subscribed you can post messages at the website just like you would from your e-mail program. If you are not subscribed you can only read the messages on the web - not post new ones or take part in other fun stuff on the e-groups site.

3) If your ex-wife signed you up to this list and you are a entemologist in South Africa and have no use for this list whatsoever, you can unsubscribe yourself IMMEDIATELY two ways - neither of which involves me or posting to the group. You can go to the website above (don't worry, it's posted at the bottom of every message so you won't forget), click the modify button, and click UNSUBSCRIBE. You can also send a message (blank if you like, nobody will read it) to "stupidscannertricks-unsubscribe@egroups.com" . This is also in the site subscription notice you get when you sign up, and I've added it to the Stupid Scanner Tricks website where you first saw the subscription form. Be sure you send it from the same e-mail address you originally signed up with or

nothing will happen

So! Quick Review. 1) Go to website
http://www.eGroups.com/list/stupidscannertricks and select digest mode or
read on web. 2) if that doesn't make life peachy for you, unsubscribe by
sending a blank message to stupidscannertricks-unsubscribe@egroups.com or
from the website where you set the digest mode.

The changes go into effect immediately, you get what you want, I don't
have to hand hold anyone, and the list stays on topic.

I OWN A RADIO SHACK BRAND TRUNK TRACKER THAT SEEMS TO HAVE A MANUFACTURER ERROR.

IT ISN'T BLOCKING OUT ANY FREQUENCIES FROM 30.00 MHZ - 1200.00MHZ.

IT IS ONLY SUPPOSED TO GO UP THROUGH 900.00, BUT IT SCANS ALL THE WAY TO 1200.00.

NOT ONLY THIS, IT PICKS UP CELL PHONE CALLS IN THE 869-915 RANGE (NOT THAT I AM LISTENING).

MY QUESTION IS - WHILE SCANNING 872.00 - 892.00 - I PICK UP CERTAIN CONVERSATIONS. AFTER 10-20 SECONDS, HOWEVER, THE SIGNAL DISAPPEARS. WHAT IS CAUSING THIS ?? IS THERE ANY WAY TO CORRECT IT ??

i have one - actually - two - both are pro 91 radio shack trunk trackers. one is handheld, the other is not. i tried to do some "modifications" on the handheld, and now it doesn't work. it is free to anyone who wants it.

the other table top model - fairly new. i would sell for $50.00 (paid 150.00)

YOu are probably hearing cell phone calls. WHen the cell phone goes to another cell you lose the call. I found that if you lockit in sometimes you can hear the whole conversation or else keep scanning till you pick up the call again.

The only way to remedy this problem is to program all of the frequencies
that pick up those kind of "conversations" into your memories. When the
conversation that you're hearing does a "handshake" to another tower, it
just simply switches to another frequency. If the ferquencies are all
programed into your memories, you can just simply push "scan" until you hear
the same conversation, again.
By the way, where did you get that scanner? If you ever want to sell it,
look me up.

THE DIFFERENCE IN RECEPTION CHARACTERISTICS ARE MINIMAL. ESPECIALLY ON
CABLE RUNS UNDER 50 FEET.

This is Ture.. But I like to see the Right Stuff used because I have know a lot of Scanner user's move onto 27 Mhz or UHF and thay Try to use the Same TV cable on the Set and Cook the Back end of there Radio...

And there is not a lot of Difference in price...

Well, I will tell you this much, I live in Ohio, and I don't know if it is legal, but I have driven by cops with my handheld in mid air trying to find my volunteer fire department, and not once have I been pulled over. So I am saying it is legal, as long as the proper authorities don't find out! :-)

In my area (Florida), it is LEGAL to possess one, and carry it on your person or in your vehicle. It is, however, ILLEGAL to have that type of equipment INSTALLED in your vehicle or have your vehicle modified to install it. You can have a cigarette lighter adapter and use it while in your vehicle, you just cannot have it installed in your vehicle.

In New York it is ILLEGAL to have a scanner inside a vehicle, unless it shares space with the liquor in the trunk of the car. The bottom line is that police officers will leave you alone as long as they do not suspect you as a threat to the public. If you look like a middle-east terrorist, or are wearing biker-colors, you will lose the radio on the spot.

Well, I will tell you this much, I live in Ohio, and I don't know if it is
legal, but I have driven by cops with my handheld in mid air trying to find my
volunteer fire department, and not once have I been pulled over. So I am
saying it is legal, as long as the proper authorities don't find out! :-)

i live in Massachusetts, and i am a police dispatcher, firefighter, and EMT. i have a police radio, 2 scanners, siren, emergency lights, cell phone, and 2 CB's. ive never once have got asked why i have all that equipment in my car, but yet i don't advertise that i belong to any emergency org. (i.e. fire/ems stickers/plates), so it looks like an ordinary car(with an extensive amount of antennas). sometimes I carry portable scanners with me, and no one has said anything, so i highly doubt its illegal in MA.. but i know it doesn't do you any good for Canada...

Tara:

What I do a lot of times... Geesh, this is a hard one, especially if you don't want to be noticed... I have a scanner antenna that looks like one of those cell phone antennas, that sticks on your car... It's a really neat object! Hardly anyone will know! (Only those who have cell phones will think you have a cell phone!! :-) Anyway... If you feel like sticking something on your car, it is 19.99 at Radio Shack! Good luck!!

Below is the result of your feedback form. It was submitted by () on
Monday, February 8, 1999 at 15:19:34

What: aircraft radio
frequency: 108-136
body: Here is a cool trick! Got a cheap FM radio! You got a scanner!
Take the back of your yard sale radio and find two coils. Touch
your finger to each of the coils to determine the main coil.
It should change frequencies when you touch it. Now tune a station
near the 108 Mhz range and carefully spread the rings if the coils
apart until the station is and the 88 MHz position on the dial.
Now tune up the band and you should be able to hear aircraft!

Got any questions just e-mail : jcradio13@...

What: Space Station Meir
frequency: exactly 145.985
body: Space station meir is on this frequency. They pass 24 times a day.
Most of the time you just hear them using packet but every now and then
they use voice.(once a month actually. it is not scheduled so just hope
you get lucky.) I have communicated with them only once on voice. Good
luck, Caleb(KD5FCW)

Ya know... You definitely do have a point there, but you have to admit... If you were a cop, and you saw a car (Unmarked with no decals) flashing its lights going down a road, wouldn't you be a little suspicious? I live in a large town, and I have had cops follow me down and ask me why I have a lightbar on my car. I volunteer firefight in a town in michigan (Right over the border). I respect them asking me, cause they can't have a normal everyday Joe Schmoe going around with a lightbar and siren through town!

Jerry,

Nationally, according to what I have for that frequency range, is Army, Air Force air operations and search and rescue. Also, U.S. Mint has one or two in that range, as well as Forestry and National Park Service. Curious what kind of transmissions you are hearing. Care to share? ~Celeste

I listen to my local fire department and when they dispatch a run they sort of clasify the run as a "silent alarm", "still alarm", or a "box alarm". What do each of them mean. Thanks for your help.

480. [SST] Fire Department

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-02-08 20:52:25 UTC
From: aronpryor@hotmail.com
Topic: 480 Message: 480

I listen to the local fire and ems on my scanner. When they dispatch fire and ems crews they tell whether it is a "silent alarm", "still alarm" or a "box alarm" can anyone tell me what they mean.

Thanks A.P.

From: Doug Holloway
Topic: 481 Message: 481

Can anyone tell me why my little Radio Shack Pro 49
will easily pick up a PD from 25 miles away or more
on the 150.000-160.000 band, but will hardly get
anything on the 40-50 lowband? The scanner has a 6"
rubber ducky antenna, so would a longer antenna help?

From: MJHolbrk
Topic: 483 Message: 485

Silent alarm is self-explanatory. No audible alarm, but the alarm did trigger an automatic phonecall to the emergency service that is dispatching the response.
Still Alarm is an audible alarm.
Box Alarm is an "alarm-box" that looks like an over-grown parking meter painted red on the corner of an intersection. Anyone can pull this alarm, and 99% of the time the box alarms are false alarms. If you hear a Box Alarm dispatched, consider it false, unless the dispatch is quickly followed by multiple phonecalls on 911 reporting an emergency near the original dispatched destination.

Topic: 486 Message: 486

Yep. Get a longer antenna. Also remember that sometimes low-band transmissions are using less power and are more often simplex systems rather than the duplex repeater systems of the higher bands. So you may be up a creek if the station you are listening to is a 20-50 watts. Cordless phones are in that range, and the most ideal antenna will not receive over a mile.

It seems it depends where you live. Where i live, a box alarm is a street alarm box, but it also means in some towns that there is fire showing, and more personnel are needed at the station for more apparatus.

Hello everyone me again,
I had a question for the group about my pro-64.I have heard various rumors around the net that it has a built in computer interface.
Is this true?
and if so what cable or connection will I need to interface with my p.c.?

Thanx alot,
F(x)

P.S. Nuttin' but love for ya rich!

ANYONE HAVE SUGGESTIONS ABOUT A GOOD COUPLE OF BOOKS FOR THE BEGINNER SCANNER ENTHUSIAST - AND WHERE THEY ARE AVAILABLE ?

I AM AMBULANCED, POLICED, AND AIR PORTED OUT.

I'M LOOKING FOR ANSWERS TO STUFF ABOUT FREQS (100KHZ-2800MHZ). WHAT KIND OF STUFF IS WHERE (OUTSIDE 30-MHZ - 900 MHZ STUFF) ?

SHOULD I ALWAYS BE SEARCHING FM, OR IS THERE A USE FOR W-FM, LSB, USB, CARRIER ??

THANKS

You might try www.ebay.com. They usually have that
model there at a price that's quite affordable. A
word of advice on bidding for those unfamiliar with
online auctions: Keep it real! Also, Bob's Bargain
Bin (look it up on Metacrawler) might have one. He's
very reasonable pricewise.

525. [SST] How to get off this list

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-02-17 06:08:06 UTC
From: Rich Barron
Topic: 525 Message: 525

Here we go again...

If you do not want to get all the e-mails this list generates, take a deep breath and try these things in this order:

1) go to:

http://www.eGroups.com/list/stupidscannertricks

This is not the Stupid Scanner Tricks page. It is a seperate page that has some pretty nice features. (Calendar, on-line poll, etc.) One of the main reasons I picked e-groups is because of these nice features. Click the MODIFY button to change your individual settings.

The best one is the DIGEST feature. You have 4 methods of getting the messages from this list. The default is individual e-mails. That will throw every message from the list to your inmail box and get you all huffy (well, some of you who are now gone! :)) You can also choose a daily summary or full text digest. This will take either the subjects and first sentence (summary) or the entire messages (full text digest) and compile the entire days worth of messages into one (yes one) e-mail message. This is what I use for a number of mail lists I am on. I still get all the info, but I don't have 150 messages a day to sort through. Every person who asked to be removed from the list was set to individual e-mails. Move to a digest mode and see if that helps (it will) because you probably enjoy the information on the list as most people do, but don't like the bulk of a lot of messages sent to you every day. This soves both problems.

2) If you still don't want the digest sent to you, there is another option available at the website: "Read it on the web". Just what it states. You go to the website (above) and read the messages on the web. Since you are still subscribed you can post messages at the website just like you would from your e-mail program. If you are not subscribed you can only read the messages on the web - not post new ones or take part in other fun stuff on the e-groups site.

3) If your ex-wife signed you up to this list and you are a entemologist in South Africa and have no use for this list whatsoever, you can unsubscribe yourself IMMEDIATELY two ways - neither of which involves me or posting to the group. You can go to the website above (don't worry, it's posted at the bottom of every message so you won't forget), click the modify button, and click UNSUBSCRIBE. You can also send a message (blank if you like, nobody will read it) to "stupidscannertricks-unsubscribe@egroups.com" . This is also in the site subscription notice you get when you sign up, and I've added it to the Stupid Scanner Tricks website where you first saw the subscription

form. Be sure you send it from the same e-mail address you originally signed up with or nothing will happen

So! Quick Review. 1) Go to website http://www.eGroups.com/list/stupidscannertricks and select digest mode or read on web. 2) if that doesn't make life peachy for you, unsubscribe by sending a blank message to stupidscannertricks-unsubscribe@egroups.com or from the website where you set the digest mode.

The changes go into effect immediately, you get what you want, I don't have to hand hold anyone, and the list stays on topic.

Hi there Rob, I found the Police Call Plus books very handy to use for scanning for things like racing, military, banks, and the like.

A place to purchase POLICE CALL PLUS BEYOND POLICE CALL is at RadioShack. The company in Fort Worth, TX is telling all stores to have a list available of the local frequencies. I work at a RS in Santa Rosa, CA and my list is the best in northern CA. I include federal freqs used in our area traffic planes, air freqs, etc.

What: what?CB Radio RC Channels
frequency: from what to what?27.1450
body: I am an avid CB Radio user and find some rather strange sounds on
the
Radio Control frequencies of 26.995, 27.0450, 27.0950, 27.1450 and
27.1950. A several friends of mine have told me that these channels
are also used by the Military as Beacons as well as Auto-Car Alarm
devices. Can anyone fill me in on the sounds that sound like grunts
and deedle-deedle.

Hi, I have a radio shack pro-50 radio scanner. I am having a problem with it. I got some frequenices from a friend, but when I program them into my scanner, I only get a signal, and no conversation, I tried every frequency, but no result. Some times, it does pick something up, but only for a short time. It does pick up the weather channel and some tv channels, but no police or radio. i live in college station.

What: what? Computer CPU
frequency: AM Broadcast Band
body: I listen to my computer on the radio. I t makes some great
tracking- ticking and a whole assortment of multi spectrum audio
sounds.
In addition to being interesting sounding, I get to know the sounds and I
can tell what functions are happening and how things
are going like if the cursor is tied up with the hour-glass or wristwatch
waiting (the audio sounds continually change even
though the video image doesn't). I have scanners but it's faster to do it
with an AM broadcast band receiver. I think the cheap
clock radio types work well. Just park the radio atop the CPU and tune up
and down in the AM mode. My computer comes
in best at 610 Khz AM but here's what you do: continually click any key
or the space bar while tuning across the AM band
until you hear the effect of the keying. You may hear this on many
different frequencies so don't settle for the first you find.

Do you have a manual for your Pro-50? If not, go to
http://support.tandy.com/support_electronics/6905.htm
for an online version. Otherwise, take it to your
friendly College Station Radio Shack, surely someone
there can help.

What: Correction to page.
frequency: It's not Khz, it is Mhz.
body: This item on your web site needs to be fixed:

Travelers Information Service
Try these frequencies next time you are on the road and see of you get
highway information. You know, the same info you could just tune into
with your AM radio. Anyway, the frequencies are 530 kHz and 1.610 kHz.
Notice that these are kHz and not mHz - it might make a difference.

No, actually 1.610 is mHz, not kHz. Or you could say 1610 kHz.

I'm sure that you knew this and it was just a typo.

And thanks for the terrific site!

RADIO SHACK SELLS SEVERAL DIFFERENT AFTER MARKET SCANNER ANTENNAS - BOTH FOR BOX AND HANDHELD UNITS. I BOUGHT ONE (ABOUT $14.00). IT SIMPLY REPLACES THE STOCK ANTENNA - ABOUT 3 TIMES THE LENGTH. IT GIVES ME MUCH BETTER RECEPTION ON MY HANDHELD - SPECIFICALLY IN THE 30-50 MHZ AND 800-900 MHZ FREQS.

Hello bob, have you ever heard of using a radio shack plugin tv antenna I use this and it works quite well.
What you do go to radio shack and buy a plugin tv antenna. These do not work for tv's so they have been pulled off the shelf and you have to ask for them. They usually have them in the back. They're real cheap because of not working. (used to be $10.00 now $2.99)
While you are there buy a F to BNC adapter, and a small cable wire like for tv cable. You need about three feet to ten feet depending on how close your scanner is to the wall. Hook this all up and plug it in. What it does is turns you whole house into a great big antenna. I can pick up all of the cordless phones in my town now, using this method.

sounds like you have a DEAD C-MOS BATTERY. Look inside the unit for an object that looks like and the approximate size of a QUATER. Be carefull when removing it, as too much preasure might break the battery holder. On the bottom side of the battery will be some numbers. Radio shack should be able to sell you a replacement from the watch battery area.

Buy a frequency counter from Radio Shack and get as close as you can to one of their transmitters (hopefuly a handheld if they use them). A frequency counter is useless if your tryong to get a reading off the base transmitter, as a frequency counter only works if you hold the handheld right next to the frequency counter.Good luck.

HELP!
A Regency TOUCH K500
what is this monster?
it"s as big as a tv
the front has slide switches for volume, squelch, and power on the right
side face.
n t far left is a digital readout at the top(it's blank now)
underneath is a touch keypad
the usual prog., search, man., and scan on the left side.
the next coloumn is 1 w/time, 4 w/lower, 7 w/priority and 0 w/bank.
the next row over i;
2 w/min/sec., 5 w/upper, 8 w/wx aler, and pm /delay.
the third is 3 w/alarm, 6 w/store, 9 w/count.
there are 2 rows of led's in he approx. center, going left to rght over
another touchpad of 2 buttons ov each other, 8 set s of 2 numbers.
they are labeled from l to r, 100 oer 1, 200 over 2 and so on ti;; 6
which has a picture of a red cop's light.number 7 has a fire flame, and
8 has a split picture of what looks like a sailboat with wx in the sail
and a telephone in red, a handset only.
i get no light action but it dos make hash noise and the squelch works.
the led display is dark
purchase pricewas $14.96
any help!

radio shack sells a small/unobtrusive house mount scanner antenna (about 8 foot tall) it works best if you can mount it on the highest possible place - i.e. chimney, side of house, etc. it costs about 50.00 (including 100 feet of coaxial cable,). its not heavy/big, and easy to assemble. since i cant mount one on my house due to neighborhood covenant, i took a 5 gallon bucket, drilled a whole in the bottom to run the cable through, filled it with a bag of quick dry cement to set the antenna, and put it in my backyard. it is easily movable, and i can pick up transmissions on just about all frequencies.

You might try this website
http://thechesapeakebay.com/bnr/3000.html
There's a lot of info on the 3000xlt there, and they
even have a chatroom, where I'm sure you'll find
someone to answer any scanner question you have.

What: ALL
frequency: All Frequencies
body: Connect your scanner to a TV aerial!

Interested,then heres what to do get a BNC plug to phono adapter
you can find these in most audio kits then get a tv aerial socket to tv
aerial socket. Tape these together and there you go you can conect a Tv
portable or static aerial to your scanner!

PS. this works good on the ham and CB bands

Why not just use a BNC to F adapter. Works easier.

Hello all me again!,
Iwas wondering if anyone knew where i could get some mods for my 895xlt
I have the interface for pc control and am running scancat.
How in the world can i get to monitor the "800mhz" band w/ or w/o the
pc. any help would be very appreiciated.

P.S. by the way what is the url for that page at xoom on mods?
P.S.S. Hang in there Rich!

BC890XLT

Subject: bc890xlt-800mhz full restore

1. remove all cabinet screws.

2. remove 4 face plate screws and 1 bracket screw at center of main board.

3. carefully depress the outside edges of faceplate shield and tilt down.

4. unplug j4 and j5 and ribbon connectors j501 j502 and j503.

5. remove faceplate and logic board.

6. position board so microprossoe chip is on left and memory battery on right.

7. locate the 3 chip resistors at chips upper right..marked 104 and

carefully desolder.

8. install the chip resistor at the 2 empty pads closest to memory battery.

9. reassemble carefully in reverse order.

10. test by entering freq. around 870 mhz.

Well, for 40-50 Mhz, you want a VHF Low antenna. Usually they are 60-100 inches long, or 35 inches with a 5 inch coil.

For 900+ Mhz, you want a 13 inch antenna with a coil in the middle (An old cell phone antenna works well) or a straight 3 inch antenna.

This all has to do with the wave length of the frequency.

Radio shack sells a wide selection of antennas.

CB antennas work adequately for 40-50 Mhz.

Remember that the range for the typical phone is about 200-500 feet. Not much.

Most 900 Mhz phones are spread sprectrum (meaning they transmit on 10-20 freq. At once) and the base does NOT re transmit the handset. You will need two scanners to pick up both sides of the conversation.

Most people still have the old 40 Mhz cordless phones. And because they are only $40 now, people are still buying them.

If you happen to come across one that is scrambles, it is probably just a simple inversion. If you have a Winblows laptop with sound I/O you can get a real-time decoder here:

http://www.geocities.com/CapeCanaveral/Lab/1060/index.html

Click on "Software"

Hope you have fun scanning. And remember, is illegal for a civilian to have a scanner in a vehicle.

Try 46.44 or 44.44 one of these should work.

Try looking in the 46.000 frequecies. If that does'nt work
try 44.000 freq's.

Jerry

You are listing to the handset, listen to 43.74 mhz for the base, this will give u both sides of the conversation. See Police Call for a list of all the low band freq. and many, many others. It is available at Radio Shack for approx $12.95.
Gary C. Hamilton

Well jerry,

What you are picking up is the Handset frequency. What you want is the
base freq.

Search from 40-48 Mhz and you should find it.

From: RatServ
Topic: 608 Message: 608

hello all
i recently bought a old scanner a Beatcat 8 - a 8 channel scanner that uses crystals - i was wondering if anyone had any info of any kind about this scanner (date of manufacter, special instructions, anything) also where can i buy more crystals (radio shack ?)

thanx for you time

SOMETIMES, YOU WILL FIND YOUR PHONE ON 2 DIFFERENT FREQS. MANUALLY TUNE UP/DOWN 100 kHz, 10 Khz SPREAD FROM 48.84 AND YOU SHOULD FIND THE FREQ. WITH BOTH SIDES OF THE CONVERSATION.

In order to monitor both ends of a cordless phone
conversation, you have to scan 46.00 - 47.00.
Otherwise, you'll usually only get the handset side,
which is apparently what you're doing.
Doug

See http://www.crbbooks.com/ for a dipole antenna for 46/49 mhz (yes they sell antennas too, not just books)

See Radio Shack for a 800-900 mhz specific antenna (or adapt an antenna from a cellular phone)

See a laywer about announcing to the world that you intend to break federal law

Try 46.61 through 46.97

Depending upon your scanner model use your LIMIT SEARCH.

Good luck,

Michael Copeland

Many local departments (as well as the state) in this area are still on the low 40-50 range. Many have gone to the 400+ or 800+ frequencies. I f you are patrolling the highway it's good to know what's going on in the towns, before you get involved with an armed robber that you might think is just a speeder. And for the next question, the answer is NO, The communication between departments is not adequate. That's why we buy our own scanners to listen in.

I just bought a pair of midland two-way radios at a ham-fest and need them re-programmed. I know this is a SCANNER group but I hope one of you will know some one who can do this for me. plese forward this message to all your scanner/cb/2-way radio friends. the radios are midland 70-245B. thanks to all.

By the way do you have anymods for a pro-2021? or a pro-70?

From: Rich Barron
Topic: 623 Message: 623

If you do not want to get all the e-mails this list generates, take a deep breath and try these things in this order:

1) go to:

http://www.eGroups.com/list/stupidscannertricks

This is not the Stupid Scanner Tricks page. It is a seperate page that has some pretty nice features. (Calendar, on-line poll, etc.) One of the main reasons I picked e-groups is because of these nice features. Click the MODIFY button to change your individual settings.

The best one is the DIGEST feature. You have 4 methods of getting the messages from this list. The default is individual e-mails. That will throw every message from the list to your inmail box and get you all huffy (well, some of you who are now gone! :)) You can also choose a daily summary or full text digest. This will take either the subjects and first sentence (summary) or the entire messages (full text digest) and compile the entire days worth of messages into one (yes one) e-mail message. This is what I use for a number of mail lists I am on. I still get all the info, but I don't have 150 messages a day to sort through. Every person who asked to be removed from the list was set to individual e-mails. Move to a digest mode and see if that helps (it will) because you probably enjoy the information on the list as most people do, but don't like the bulk of a lot of messages sent to you every day. This soves both problems.

2) If you still don't want the digest sent to you, there is another option available at the website: "Read it on the web". Just what it states. You go to the website (above) and read the messages on the web. Since you are still subscribed you can post messages at the website just like you would from your e-mail program. If you are not subscribed you can only read the messages on the web - not post new ones or take part in other fun stuff on the e-groups site.

3) If your ex-wife signed you up to this list and you are a entemologist in South Africa and have no use for this list whatsoever, you can unsubscribe yourself IMMEDIATELY two ways - neither of which involves me or posting to the group. You can go to the website above (don't worry, it's posted at the bottom of every message so you won't forget), click the modify button, and click UNSUBSCRIBE. You can also send a message (blank if you like, nobody will read it) to "stupidscannertricks-unsubscribe@egroups.com" . This is also in the site subscription notice you get when you sign up, and I've added it to the Stupid Scanner Tricks website where you first saw the subscription form. Be sure you send it from the same e-mail address you originally

signed up with or nothing will happen

So! Quick Review. 1) Go to website
http://www.eGroups.com/list/stupidscannertricks and select digest mode or
read on web. 2) if that doesn't make life peachy for you, unsubscribe by
sending a blank message to stupidscannertricks-unsubscribe@egroups.com or
from the website where you set the digest mode.

The changes go into effect immediately, you get what you want, I don't
have to hand hold anyone, and the list stays on topic.

Well, ummm.... Whoo....

Let's put it this way. I'm using it as an early warning device to predict
when my company might be called.

Kinda like listening to the Police and waiting for them to request us :)

thats the same reason I have a scanner in my car... you can usually predict
when we are going to have a fire run by listening to the police and ems bands..

And by the way, As far as scanners being illegal in vehicles. Those are mostly local laws or ordinance's . Even given that, the laws don't restrict emergency personnel from having them in their vehicles.

From: Donna Kjorsvik
Topic: 604 Message: 630

Hi, try looking under 46.000 and roam/scan to 49.999 you should find
both sides of conversation between 46.000 and 47.000.

Below is the result of your feedback form. It was submitted by () on
Friday, March 26, 1999 at 21:13:13

What: Talking Car
frequency: 462
body: To make your car talk you will need a FRS radio,your scanner set to
the FRS frequency and an external speaker mounted behind the grill.
Then go find a little strip mall that has a One Way parking lot,park your
car and stand a half block away and wait for some Goober to drive in the
Wrong way.As Goober is walking to the store, Your car can tell him that
he can't read,why are all the cars parked in one direction except
his,etc.etc.

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-03-27 12:52:40 UTC
From: Keith D. Tyler
Topic: 597 Message: 633

>if it's illegal to have a scanner in a vehicle,
>then why does a fireman know so much about illegally monitoring phone
>conversations? seems absurd

He said it was illegal for "civilians" to have mobile scanners.
Obviously some people are above us lowly civilians :) like police.
Are firefighters?

Anyway (Andrew), unless you're referring to a federal law I dont know
about, I believe that differs from state to state...

643. [SST] Jamming

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1956-11-01 13:06:15 UTC [implausible archived timestamp]
From: Mathew Dutra
Topic: 643 Message: 643

Hello all.
I know that this is a scanner tricks site, but this is still a cool trick.
I've used a RadioShack DX-375, (the portable digital shortwave reciever),
and I can tune another radio in my room to an FM (88-108) freq, then tune
the DX-375 to 10.8MHz lower, and the other radio will go dead. For example,
I had my stereo on 104.1, so I tuned the 375 to 93.3, pointed the antenna at
it, and click, 104.1 went silent. I've tried it on other stations al well,
but obviously it won't work on things below about 97MHz.
If anyone knows exactly why it does this, I'd be interested in knowing.
Also, it doesn't seem ot work well when the "jamming" freq is a station
thats pretty strong. (in central CA, 93.3 is nothing, so 104.1 cancels
nicely, however, 103.7 cannot cancel as well, since 92.9 is a local station)
Just thought I'd add my little piece to the group.
And as for andre (budfrogs00) you're gonna get hurt, because I do in fact
know where you live, so don't get smart w/others on this list.

Well, I'm not sure if mobile scanners are illegal, but your best bet is to have it in an inconspicuous place if there is any doubt. If you are pulled over, immediately stuff it under a seat. My belief is that radio waves are the public's domain and that any infringement on the rights of the public to receive them is a serious violation of the U.S. Constitution. However, we must live with these stupid regulations and try our best not to get busted.

Military communications are usually on the 200.0 MHz range while
Federal Agencies are usually on the 400-406 MHz range. If you try to
enter these into a popular scanner, it will say "ERROR" or it just plain
won't accept it. The government knows this and that is why they use
those frequencies. By the way, if anyone can get info on scanner
modifications to pick up these frequencies, please let us know. We
aren't afraid to use a soldering iron.

Well in Indiana as far as I know it is illegal to have police scanners in your car. But at least in my town the police don't realy care. I guess that's the benifits of living in a small town. I do have a question though, I have some cable from an old computer network that is Coaxal and has the same ends as the regular scanner antennas, it says RG-58A/U coaxal on the side of the wire. Would this be effective for use as wire to connect to an antenna or doesn't it matter what kind of wire I use.

Just because your working for the city or goverment
doesn't mean you follow all of the laws. Look at
clinton.

By Law in the Commonweath of Kentucky it says it is unlawful to carry a receiving and or a transmitting device that does so on Police bands. Unless you are a licensed Amateur Radio Operator. You may not modify you vehicle for installing such devices. You may carry them in the trunck and if you are an authorized Dealer. You may use them on your own property.

for amp's, military converters and cell phone converters,
try Gorve Enterprises in Brasstown NC
they have a web page
i have the military converter and it is extremly hard to search and find
active frq.
i'm near navy AF and army post air op's corridors and the converter wrks
good on a pro 2023
the cell phone converter is no longer offered
i just saw one for sale on dreaded E Bay that went for a phenominal $60+
on a purchase price of about $85
they have a good amp also that sometimes overloads a cheaper scanner
there is a attentuate control
there are kits for amps and a tv amp can be used with signal degredation
in the low and high areas
all the grove products come in handheld or base antenna plugs

it will work for realatively short runs with minor signal loss
the longer the run
the more signal will be lost
try to stay under 50 feet
also try rg 59
its cheaper and can work in longer lengths
try an anteena for tv with the thing on its side and not mounted flat
you'll be surprised at the sensitivity
but it will be highly directional
you can cut it shorter for specific bands

670. [SST] Yet another antenna question

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-03-31 10:33:41 UTC
From: Keith David Tyler
Topic: 670 Message: 670

I know this comes up constantly, but I need a recommendation for an antenna.

I have an inexpensive low-end RCA handheld scanner. Usually I am using it indoors. I would like to find or make an inexpensive/simple indoor antenna which would improve my reception.

My indoor location is very poor -- I am on the first floor of a five story building and my only window looks into an air shaft in the middle of the building.

My scanner only reaches from 30MHz to 512 MHz,

Thanks for any sugestions.

PS, I went to rad-hack and they said they needed to see my scanner in order to recommend an antenna (and make a "special order"). Um, what? Is it really that complicated to suggest a good 30MHz-512MHz antenna?

good old radio crap
check out their Portable TV/FM amplified
antena part # 15-1607
it works well with a small handheld
you will need probably a a plug adapter for the radio and two aa
batteries try not to overload with the amp there is no adustment
i've useed it on two h/h and it works good
it also helps the small strereo in my office pick up john boy and billy
in the am on a station pretty far away any real fm antenna will work
though

675. [SST] Ohio Revised Code

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-03-31 23:41:59 UTC
From: ericeby@hotmail.com
Topic: 675 Message: 675

I checked out the Ohio Revised Code on the web,
and this is what I found:

"OHC Sec.293352

(A) No person shall. . .
(1)intercept or attempt to intercept a wire, oral, or electronic
communication. . .
(B) This section does not apply to the following:
(10) The interception of a radio communicatoin that is transmitted
by the following:
(b)A . . . communications system including a police or fire system."

In other words listning to them IS LEGAL, but there was no mention anywhere
that I could find that lisning in a car is illegal. I have heard differing
views on that though.

There is a deputy sherriff that attends my church. He's the next guy below the sherriff himself. I asked him once if it was legal for me to have my scanner in my truck. He said that as far as he knew there was problem with it.

That's all I know.

Keith,

What a crock !!! Special order ! Just go in to your store and get the discone antenna, or the smaller (and cheaper) $17.95 one. Take it and hang it from the ceiling with a cup hook. These antennas come sans cable, so you will need to get some. Keep the length as short as possible.

If you are using the "rubber antenna" now, these will help a lot !

Actually, Coax Ethernet cable is BETTER than the antenna wire that you
would buy for high frequency (i.e. 900+mhz) and it woirks just fine for low
and mid band.

I use it and it seams to work just fine.

Thanks all for suggestions. To answer Buff Cody's Q, RCA repackages a few GRE models, and mostly these are not models also resold by RS, even though there is probably not much diff overall. The one I have is RCA model RP-6100, which I have roughly identified as a GRE Pro-50. RS does not seem to resell these, at least not now... StrongSignals has a review of their racing fan model.

Perhaps I should try a different rad hack. The one I went to seemed generally dumbed-down. Most of the floor space is devoted to crap like tandy computers, stereos & batteries... only a small section of racks for doohickeys like spare parts, wires, antennas, and the replacement CPU fan I bought there the other day. Not a 200-in-1 electronic kit in sight! :l

Unless they're all getting like that now...?

I would suggest anyone that is looking for a ploace to buy an antenna for scanning go to an amature radio store. They will know more about the types of antennas that will work for your situations. Most of the people that work at rad hack's don't know enough about the types of stuff they sell let alone anything about the specifications about anything technical.

I am not saying all rad hack employees are dumb, just not educated enough.
The rad hack in my area couldn't even sell me the correct TV antenna.

To: rbarron@...

Below is the result of your feedback form. It was submitted by () on
Thursday, April 1, 1999 at 23:22:39

What: NWS weather data
frequency: 165.015
body: This frequency is used in Tulsa, OK to transmit a 1200 bps weather
data stream. I use a scanner, radio modem (TNC), and software to decode
the data and display it on a computer. The system is in place in
selected cities around the country, but I am told different frequencies
are used. The software used to be freeware but it is getting harder to
find online because commercial companies have been selling packaged
systems for several years. If you are interested I can give you some
more details and point you to websites where there is more information.

By the way, it sounds kinda like someone continuously going
"Eeeeeeeeeeee" in an irritating voice...

My local police department occasionally uses a "secure" mode for there
transmission. It is not an Inversion scrambler.

It sounds like a bunch of static. I'm thinking it is a DES encryption, but
I'm not sure.

If it would help, I'll record some of it...

I agree with your statement...go buy a scanner frequency book
like the rest of us. If you can afford to take up scanning as a
hobby, then invest $9.99 for a frequency book. There are
plenty of channels to scan without having to resort to breaking
the law by monitoring cell phones,cordless phones, or baby
monitors. Do not tell anyone what you heard...Do not record
what you hear....enjoy the world of scanning....
P.S. If you love your scanner..do not attempt to modify it. The
surface mounted technology can be ruined with the smallest
of soldering irons and your scanner's warranty will be voided
and it will become a door stop. Thank God that you have a
scanner and let it do what it was intended to do....

"Richard NOLASTNAME" I agree what you think about the not listening to phones but you should try to modify your scanner!! Not to receive cell or anything like that but DID YOU EVER HEAR HOW LONG THE SQUELCH TAIL IS ON THE RADIO SHACK PRO-51...obviously not. It's reasons like that why most people modify their scanners.

From: Keith David Tyler
Topic: 688 Message: 688

I listened to the NOAA Weather freq for my area today (havent bothered in a while) and was surprised to hear a crappy computer-sim voice instead of a human recording! Sounds like one of those Mac voices.

Is this happening elsewhere?

We have the computer voice here in the Washington, DC, area also. I have no problems hearing or understanding it. It appears that maybe NOAA is haveing a transmission problem and dosen't know it. It would be better if you sent constructive comments to them. Try NOAA.gov for a web page. They are doing it for economic reasons.

Happy Holiday season.

it is NOT an Apple PlainTalk voice. They sound almost human. Take a listen:

22 Khz, 16 Bit (Native Resolution) 1.2 Meg each
http://www.pghfamily.net/ppc603ev/pt/agnes.wav
http://www.pghfamily.net/ppc603ev/pt/bruce.wav
http://www.pghfamily.net/ppc603ev/pt/victoria.wav

11.025 Khz, 8 Bit 386 K each
http://www.pghfamily.net/ppc603ev/pt/agneslq.wav
http://www.pghfamily.net/ppc603ev/pt/brucelq.wav
http://www.pghfamily.net/ppc603ev/pt/victorialq1.wav

But anyway...

I think that they are using the same system as airports use for automated
AITS (Automatic Terminal Information Service)

If they actually used a Macintosh, you'd probably be able to understand it....

Does anyone know what type of system they are using?

Actually, the pronunciation of the machine is quite good compared to your average screen-reader or such program. But its characteristic computer-voice slurring of syllables at random and lack of proper inflection doesnt help.

So who can explain to me why its cheaper to rig up a new P2 with $300 speech software than it is to have a USCG desk ensign read the report into a tape recorder?

I bet there's someone sitting there while the report comes into the machine anyway, to make sure it sounds right.

I don't think it will help, cause being that they have gotten rid of most of the "voices of NOAA weather radio".... The thing is: They were a: trying to cut back long term costs, and b: getting into the 21st century. They succeeded in both.

listen:

Here in the Pittsburgh, PA area, our NOAA weather radio's voice sounds like the old voice synthesizer on my old TI-99/4A computer and that came out in 1979 or 1980. I remember about 10 years ago, I went on a tour of the NOAA station and back then, they still had a human recording the weather info on the old 8-Track tape carts that cycled through every so often. I also listen to the local airport weather out of Great Pitt and I swear the voice synthesizer sounds the same as the NOAA one, again from my old TI. I haven't listened to your clips yet so I don't know what yours sounds like but ours sounds so pathetic. Call me old fashioned, but I's prefer a human voice recording.

Well, they gave us a warning that they will "gradually" be switching over the
station over the next 6 months. Needless to say, that was about a year a go,
or so... I don't know if the system is implemented around all the us, but
from what I am hearing, it has!

Took a chance on a "converter" through Ebay and now have the above.it appears to be a radio with tuning dial in the center for 30-50 mhz
a squelch knob, a volume knob and power slide switch
a audio out-in slide switch
on the rear is a motorola plug recepticle and two sets of scroungy looking wires in woven sheild
the inside has TUBES!!!!
the rear is marked 12volt
anyone's father have any idea about the origins of this unit? unkown if it works yet, it looks like an am radio out of acar from the 50's.

714. [SST] GONSET MODEL 3009 RADIO?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-04-06 01:04:52 UTC
From: buffalocody@webtv.net
Topic: 709 Message: 714

Took a chance on a "converter" through Ebay and now have the above.it appears to be a radio with tuning dial in the center for 30-50 mhz
a squelch knob, a volume knob and power slide switch
a audio out-in slide switch
on the rear is a motorola plug recepticle and two sets of scroungy looking wires in woven sheild
the inside has TUBES!!!!
the rear is marked 12volt
anyone's father have any idea about the origins of this unit? unkown if it works yet, it looks like an am radio out of acar from the 50's.

Hey guys and girls,
I have a Uniden Bearcat 350A scanner that I just bought. I like it a lot except that I can't lock out frequencies on the aircraft band. Is this normal for this type of scanner? It doesn't seem to smart!

Is it green? With a squelch that works as good as an old CB squelch? It may be a "monitor" sold through the old "Bond" or "Lafayette" stores. (PRE-Rad-Sh). If so, it is a popular, but short lived, pre-cursor to the scanner. At that time (early 60's) it was hard to find a monitor for the 30-50 band that was 12 volt.

If I'm not mistaken, you can only lock out the
frequencies which you have programmed into the 350A.

ditto. here in ontario, it's kind of a mix. it's a human voice, but it's just little splices of real human speech, like "partly cloudy" or "forecast for.....wednesday" all put together by a computer. at least we can still understand what the machine is saying. the little unnatural pauses in the speech really dont matter very much.

>So who can explain to me why its cheaper to rig up a new P2 with >$300
>speech software than it is to have a USCG desk ensign read the >report into
>a tape recorder?

What makes you think there is someone (USCG ensign or other) at each of the
Nat. Weather Ser. offices 24hrs a day to perform that chore? The budget
cutbacks have forced the NWS to go to a 8 to 5, Mon. - Fri. operation.
Othertimes, except during severe weather outbreaks, the offices are closed.
The National Storm Prediction Center, south of here in Norman, OK , now
works govt. hours also. Anything that comes in after 5PM sits until the
next day!

>I bet there's someone sitting there while the report comes into the
>machine anyway, to make sure it sounds right.

You lose. After all, look at the money they save on staffing and overtime
for nights and weekends. I the money saved could fund the welfare system
for at least 15-20 minutes.

Mark

Truth is relative, it probably isn't out there.

Guys the reason given to the public is they can send weather watches and warnings from around the country in seconds. This new system is being inplimented to help us. The new system is there to stop broadcasting regular products and automaticly set off alarms in areas only needed. It also puts it right on the air. Before it had to come over a wire and be read and recorded. they also had to turn knobs and dials and push buttons to get a dangerous weather announcement to us. This is said to cut down 15 min. to getting thins to us. So don't Knock their new system. It's strictly for us. They already know the weather. Further more, I live in Louisville, Ky, and my noaa radio station, KIH43 Louisville, doesn't have the new system, nut I can here some transmissions late at night or early morning of the transmitter in E-Town or in other areas and the system sounds great. I can understand it. So my advice is for you to mail them some messages of concern and try to help them. Just give them time to get the bugs worked out.

That may be one reason; but, the other is due to budget cut backs. Automation is replacing real people. I'm a storm spotter here in Iowa and I would rather listen to a real voice when I'm in the middle of the "Bears Cage."
Our guys will come on if the storm is real bad.....they are doing this on their own time (without pay). Real people can't be replaced.

Subject: [SST] NOAA Weather Radio -- it's O.K.

>Guys the reason given to the public is they can send weather watches and warnings from around the country in seconds. This new system is being inplimented to help us. The new system is there to stop broadcasting regular products and automaticly set off alarms in areas only needed. It also puts it right on the air. Before it had to come over a wire and be read and recorded. they also had to turn knobs and dials and push buttons to get a dangerous weather announcement to us. This is said to cut down 15 min. to getting thins to us. So don't Knock their new system. It's strictly for us. They already know the weather. Further more, I live in Louisville, Ky, and my noaa radio station, KIH43 Louisville, doesn't have the new system, nut I can here some transmissions late at night or early morning of the transmitter in E-Town or in other areas and the system sounds great. I can understand it. So my advice is for you to mail them some messages of concern and try to help them. Just give them time to get the bugs worked out.

> the Nat. Weather Ser. offices 24hrs a day to perform that chore?

I don't. I don't see why it _would_ be a 24 hr job in and of itself,
especially considering the reports seem to be updated a few times a day at
specific times, and considering its usually only about a 5-10 minute
recording.

> >I bet there's someone sitting there while the report comes into the
> >machine anyway, to make sure it sounds right.
> You lose. After all, look at the money they save on staffing and
> overtime for nights and weekends.

Who checks to see if the report comes through to the machine properly? Who
checks to make sure the machine didn't mispronounce a word like
"Gloucester" or something else? No one?

This may or may not be true... But the EBS, for example, still uses human
voices for its emergency reports as far as I know, and it was recently
(1-2 yrs ago) all updated and computerized and high-tech'ed and Y2K'd and
every other mainstream buzzword'ed.

Furthermore, some on this list have reported that emergency reports will
still be done by human voice, so what you say they say doesn't seem to
follow.

Is everything at NWS now _so_ automated that reports coming into a station
don't have to go through _anyone_ to be approved before going on air? I
don't buy that... this is a government agency, remember?

I have recently performed a search on the FCC's web page for the
licensed broadcast stations for my area. I founs some strange things.
Does anyone know how often this is updated or how accurate it is??
It was pretty intersting, take a look yourselves.

Subject: WWW Form Submission
Sent: 4/7/1919 5:33 PM
Received: 4/9/1999 6:40 PM
To: rbarron@...

Below is the result of your feedback form. It was submitted by () on
Friday, April 9, 1999 at 17:05:03

What: Anything in uhf range
frequency: 500 to about 920
body: Found old Channel Master UHF tv converter at yard sale for a buck.
It says "Tune tv to channel 5 or 6" (Which is near FM band)..plugged
output of it into FM radio with external antenna jack. Tuned converter to
about channel 78-80, FM to about 88 and started moving dial on FM radio
around. Viola! picking up 900mhz analog portable and cellphones. This
trick can be used on converters with channel 3 or 4 outputs too. Plug
converter into scanner tuned from 48 to 54MHZ. Old cable TV
converters with channel 3 or 4 output can be used to listen in on vhf
frequencies to about 450MHZ with an FM broadcast radio.
Something else that might work is to use an old TV that tunes to
channel 83 on uhf with an FM radio or scanner tuned to 45MHZ (TV IF)
nearby.
Anyway I hope you get the idea.

Hey all,
I'm a little late to this thing, haven't been by the computer for a while.
Anyway, you're wondering what the voice is?
I'm not sure that this voice is the same everywhere, but from what you've said, Im pretty sure.
It's not an Apple Plain Text or Plain Speech voice, it's one of the older ones.
Everyone, go to a MAC, so to SimpleText, type something, choose "Fred" as the voice, and click play.
That is the weather voice. I have a Mac, and I knew it was Fred reading the weather instantly.
And in case anyone cares to know, Fred's been reading it for about a year now here in central California.

What: what?The Law
frequency: from what to what?????
body: For First Time scanner users in the UK it is a Criminal Offence to
have Police frequencies programmed into your scanner
Whether you are listening to them or not.

Australia is not very strict when it comes to scanners
No blocked frequencies, no laws about having a scanner in your car/truck.
It is against the law to listen to Phone calls, otherwise we can do
pretty much what we want

lucky us

749. [SST] Monthly Reminder - How to get off this list

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-04-14 03:43:47 UTC
From: Rich Barron
Topic: 749 Message: 749

It's that time again, gang. Sorry if I've played this tune before...

Rich

If you do not want to get all the e-mails this list generates, take a deep breath and try these things in this order:

1) go to:

http://www.eGroups.com/list/stupidscannertricks

This is not the Stupid Scanner Tricks page. It is a seperate page that has some pretty nice features. (Calendar, on-line poll, etc.) One of the main reasons I picked e-groups is because of these nice features. Click the MODIFY button to change your individual settings.

The best one is the DIGEST feature. You have 4 methods of getting the messages from this list. The default is individual e-mails. That will throw every message from the list to your inmail box and get you all huffy (well, some of you who are now gone! :)) You can also choose a daily summary or full text digest. This will take either the subjects and first sentence (summary) or the entire messages (full text digest) and compile the entire days worth of messages into one (yes one) e-mail message. This is what I use for a number of mail lists I am on. I still get all the info, but I don't have 150 messages a day to sort through. Every person who asked to be removed from the list was set to individual e-mails. Move to a digest mode and see if that helps (it will) because you probably enjoy the information on the list as most people do, but don't like the bulk of a lot of messages sent to you every day. This soves both problems.

2) If you still don't want the digest sent to you, there is another option available at the website: "Read it on the web". Just what it states. You go to the website (above) and read the messages on the web. Since you are still subscribed you can post messages at the website just like you would from your e-mail program. If you are not subscribed you can only read the messages on the web - not post new ones or take part in other fun stuff on the e-groups site.

3) If your ex-wife signed you up to this list and you are a entemologist in South Africa and have no use for this list whatsoever, you can unsubscribe yourself IMMEDIATELY two ways - neither of which involves me or posting to the group. You can go to the website above (don't worry, it's posted at the bottom of every message so you won't forget), click the modify button, and click UNSUBSCRIBE. You can also send a message

(blank if you like, nobody will read it) to
"stupidscannertricks-unsubscribe@egroups.com" . This is also in the site
subscription notice you get when you sign up, and I've added it to
the Stupid Scanner Tricks website where you first saw the subscription
form. Be sure you send it from the same e-mail address you originally
signed up with or nothing will happen

So! Quick Review. 1) Go to website
http://www.eGroups.com/list/stupidscannertricks and select digest mode or
read on web. 2) if that doesn't make life peachy for you, unsubscribe by
sending a blank message to stupidscannertricks-unsubscribe@egroups.com or
from the website where you set the digest mode.

The changes go into effect immediately, you get what you want, I don't
have to hand hold anyone, and the list stays on topic.

753. [SST] Trunked frequncys

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-04-14 21:37:44 UTC
From: polar_33@hotmail.com
Topic: 753 Message: 753

I was at Disneyland a few days ago with my Bearcat BC253XLT and I tried to plug in the trunked frequencys I found on stupid scanner tricks. But my scanner wouldn't let me program them in. I programed in other trunked frequencys just fine, but it wouldn't let me do it at all. The frequencys I tried to plug in are: 938.3875, 938.4000, 938.4375, 938.4500, 938.4625, 938.4750, 938.4875, and 938.5000. Can anybody tell me why it didn't work? The stats claim that it can do trunk tracking and that it's range is from 29.0 MHz through 956 MHz, so it should work. Any advise or information that you have can help.

most scanners have "holes" in their range...it does not go from 29.0 all the
way up to 938 there are frequencies in the middle that it can not get

They Block some freq. so that you can't listen b/c Phones an priv. ch operate on them.

Philip

No way to get them w/ a newer scanner either. I have an older one that has 1000 ch and will scan from 000.000.1 all the way to 999.999.9 nothing blocked. to do this yo have to have an older scanner and then take it to a raido shop to open the freq.

Hey you guys can take a poll on the hr514 and see the results at
http://www.SIscanner.8m.com
the hr514 is the new scanner bill theres a link on the page to read it
if you would like.

What: Tornado Cops
frequency: Your Local Police Freqs
body: Not only is this stupid scanner trick, it would also be very stupid
to interfere with it. In the early spring of the year your small town
police may do a test with their dispatcher and may even advertise the
test in the local newspapers as a tornado warning siren test. What
happens is the police will issue simple DTMF codes on their police radio
to turn the tornado sirens on and off. The next time you're diving for
the basement with your handheld scanner listen for for the DTMF codes and
the siren to see the connection, then duck and cover!

there arent any police/fire/rescue freqs in the 900 meg range. so, the scanner could be programmed to only trunk track specific freq. ranges - to high 800's.

To: rbarron@...

Below is the result of your feedback form. It was submitted by () on
Sunday, April 18, 1999 at 22:20:10

What: tornados
frequency: 50.0
body: A very knowledgable radio engineer I know once told me of a way to
monitor tornados using a black and white television set. He instucted me
to turn the television set on channel 13(broadcast band not cable). Then
adjust the contrast and brightness controls until the screen just goes
completely dark. Then turn the channel selector to channel 2. Then
point your antenna in the direction of the expected twister. If the
screen starts to turn white then a twister is traveling in your direction.

NOTE: Although I have not tried this,it comes from a very reputable
source. It is highly recommended to use an outside antenna with a
motorized rotator. Otherwise by the time you detect a tornado, you may be
inside of it (not good).

The theory behind this trick is as follows:
According to my engineer friend, tornados oscillate at around 50-52
MHz.(he wasn't specific). This coincides with the frequence of broadcast
channel 2. When a twister is heading in your direction, the screen on
your t.v. turns white because the picture signal of the television is
amplitude modulated. In theory, as the rotation approaches, the R.F.
signal generated is picked up by the receiver and is translated into a
white screen.

In response to you Washington State patrol question glen, The WSP has many dispatch centers for the different regions they patrol. Each area has its own frequency and some areas like Seattle have numerous frequencies. The best WSP frequency site is INTERCEPT-NORT HWEST....WASHINGTON STATE PATROL (http://www.wolfenet.com/~daydream/html/freqhtml/wsp.html).. 774. [SST] Re: needed Freq. For Seekonk Mcd's

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-04-22 01:44:04 UTC
From: YLEEKIOT@aol.com
Topic: 773 Message: 774

McDonalds frequencies are:
30.840, 31.000, 33.400, 35.020, 151.715, 151.775, 151.895, 154.060, 154.570,
154.600, 154.700, 165.600, 169.445, 467.775, 457.550. Wireless Mic Freq's
are: 170.245, 170.305, 171.105, 171.905
Wendy's are:
31.000, 170.3050, 457.5375, 468.3875, 460.8875, 461.0875, 465.0875, 466.0875.
I've found the Wendy's ones work well when you are within a few hundred yards
or so. I could not get the McDonald's ones to work at all. Good Luck !!!

What if you attach an adapter to the cable for the scanner? Would it be
worthwhile to leave hooked up permanently??
Regards, John

I had a frequincie in the past that allowed me to listen to non-delayed broadcasts of am talk radio stations, if anyone could help I'd appreciate it.
I'm in the so. Calif. area and would like to tune in to KFI 640 AM.
Thanks.

I'd like to invite the list members to a chat this Sunday at 5:00 PM Pacific Time. You can
go to the chat room at http://www.egroups.com/ChatPage?listName=stupidscannertricks

This will be our first chat session to test out new e-groups chat software. Come with a
funny story of something you've heard on your scanner, or the stupidest thing you've
scanned.

Rich Barron

Rich,

What kind of overhaul are we talking about? Will it still be "Stupid Scanner Tricks" or will it be more broad?

(or is that what you were asking _us_? :))

787. [SST] Site overhaul

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-04-24 02:49:25 UTC
From: Rich Barron
Topic: 787 Message: 787

The site overhaul will add more features mostly, while keeping the focus on tricks. I may reach out into new areas a bit as ideas come up and resources are available to do it.

One idea I've got that is off topic for the site is a section on stupid computer (image/flatbed) scanner tricks. The same name of the site, but a different definition of 'scanner'. Something of a parody of the original site - but with useful info.

I'm asking to see if anyone had seen anything they liked on another site, maybe even not scanner related but a nice feature, and would like to see it on the SST site. I've already got some ideas and we'll see how they pan out.

Most of the "old scanners" of the crystal controlled type will not work
in the 800 MHz range. They simply were not designed for that range.When
crystal controlled scanners were popular the 800 MHz band was stile very
much a no-mans land. It was very much line of sight stuff. You migth be
better off to try and find a converter and change the reference crystals
in that to move it into the desired band.

Try 471.587 or 450.187. I've found these used for that in Boston.
You might try others in 450.*. I've also found 450.587 and 450.650 used
for AM radio traffic copters.

Sorry, I sent an answer to the board several days ago, but it seems to have gotten lost
somewhere. To recap:
Your cable service is not an antenna, it is more of a wide-band phone (or data) link. There
is nothing on a cable system that is not put there by the cable system. While there may be
some very interesting signals to be found on the cable, regular scanning of police, fire,
etc. frequencies is not practical, as these signals arn't (deliberately) carried on the
system. A nearby strong transmitter may be able to slip in, especially if there is damage
to the cable somwhere, but you won't be able to monitor the regular range of frequencies
without a normal antenna of some type.

I tried this with mine as an experiment because I use
a similar method to to turn my house into an antenna.
All I could pick up using the cable was a couple of
channels and a few cell phones that was all the rest
was garbage.

807. [SST] Re: cable connection

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-04-26 03:06:08 UTC
From: NEDROG@aol.com
Topic: 797 Message: 807

you need to get a cable splitter. 1 side of you splitter goes to the TV the other goes to ur radio. you should be able to find one in any RATSHACK. usually a couple of bucks. they are made for hooking up your TV and FM receiver from the cable.

Most of these splitters have type "F" connectors, so you will need a piece of 75 ohm cable from the splitter to your radio with the proper connector for your radio, what ever it is.

hope this helps.

Nedrog

Hello- I was wondering if an outside base scanner antenna will recieve better if it is properly grounded to the radio, like a c.b. antenna (it's already grounded to earth)

Thanks
fireman13@...

I found that instead of listening to the Television during our famous
Southern Calif. high speed pursuits turn down the TV and listen to the lead
CHP car call the pursuit at 460.0250 Seems to be some backup CHP channel,
They don't use it for much else.

Grounding your outdoor scanner antenna won't help reception, BUT could help protect your scanner from a lightining strike. The antenna-scanner connection is already done at the antenna connection on the scanner through the coaxial braid. Hope this helps !

This is the statewide repeater frequency. All communications for special incidents happen on this freq since its considered a statewide law enforcement communications freq. It is basically a le mutual aid freq, in most every radio on every le vehichle in the state. Its a continous repeater system covering the state.

In Utah, its held on 155.505 and 460.025. The entire state is on the system, seemlessly. You can here most pursuits when you are hundreds of miles away.

Note: The second car in pursuit calls the chase, not the first. The first is way to busy trying to stop the perp.

A.J.
Information Technical Services
Wireless Div.

This frequency - 460.025 - which you speak of was monitored by me for several years in San Francisco, and used only as an undercover city-PD task force main channel. The task force there uses only low-power 2 watt radios, so you gotta be withing 10 blocks to even hear them. It was used constantly every week between 1992-1995. Clear voice and un-coded. It is called "Pic-ten" by San Francisco police.

From: Keith David Tyler
Topic: 829 Message: 829

One, re: hooking a scanner up to cable: If you live in a large building, like an apartment building or residence hall or something, the network of catv cables in the building just might increase your reception. I had friends who hooked their TV up to a dead cable jack in their room and got much better reception than they had normally got.

Two, I recently found a BNC splitter/connector, the kind they used to use for BNC coaxial Ethernet cards. I was wondering if one would get better reception if you took two rubber duckie antennas and hooked one up to each end of the connector... would it work like a dipole antenna? Would it help or would it just look silly?

I looking for an antenna that will receive a signal in the frequency range of 30-956mhz. I am more interested in the 900mhz area containing cellular service. I need an antenna that will have the greatest distance range of 40-60 miles. I am wondering if there is such an beast or if I could make one up myself.

thanks
Paul

I have a discone scanner antenna from Radio Shack.
It receives 29 - 1200 Reception is good on nearly all frequencies.
If you are a ham operator, you can also transmit on this antenna on 6M,
2M, 70cm.

My antenna is mounted on the chimney of our two story house and I can
regularly hear
police repeater action from appx 140 miles away.

If you want a good antenna that has good quality reception in the cell range, get a larger model (not those stupid 3 inch jokes) cell phone antenna from Rat Shack. Also, you will need a BNC to TNC connector to hook it up. Their cell antennas have high gain in the mid 800MHz range. Typically, this is enough to overload the triple conversion signal image rejection so you will hear cells 21MHz higher and lower than actual frequency. Eg. you will hear an 840MHz cell on 819MHz. Try it. Go somewhere busy with traffic and search from 806-900MHz. Your scanner will skip the cell bands, but it will hear the clear images on frequencies it can pick up. This antenna also works quite well with all other bands. Please note that it is illegal to "intetionally intercept mobile radiotelephone communications." The information I have given you was obtained through mathematics, and at no time have I ever intentionally intercepted a cell call. Procede at your own risk.

Topic: 843 Message: 843

If you do not want to get all the e-mails this list generates, take a deep breath and try these things in this order:

1) go to:

http://www.eGroups.com/list/stupidscannertricks

This is not the Stupid Scanner Tricks page. It is a seperate page that has some pretty nice features. (Calendar, on-line poll, etc.) One of the main reasons I picked e-groups is because of these nice features. Click the MODIFY button to change your individual settings.

The best one is the DIGEST feature. You have 4 methods of getting the messages from this list. The default is individual e-mails. That will throw every message from the list to your inmail box and get you all huffy (well, some of you who are now gone! :)) You can also choose a daily summary or full text digest. This will take either the subjects and first sentence (summary) or the entire messages (full text digest) and compile the entire days worth of messages into one (yes one) e-mail message. This is what I use for a number of mail lists I am on. I still get all the info, but I don't have 150 messages a day to sort through. Every person who asked to be removed from the list was set to individual e-mails. Move to a digest mode and see if that helps (it will) because you probably enjoy the information on the list as most people do, but don't like the bulk of a lot of messages sent to you every day. This soves both problems.

2) If you still don't want the digest sent to you, there is another option available at the website: "Read it on the web". Just what it states. You go to the website (above) and read the messages on the web. Since you are still subscribed you can post messages at the website just like you would from your e-mail program. If you are not subscribed you can only read the messages on the web - not post new ones or take part in other fun stuff on the e-groups site.

3) If your ex-wife signed you up to this list and you are a entemologist in South Africa and have no use for this list whatsoever, you can unsubscribe yourself IMMEDIATELY two ways - neither of which involves me or posting to the group. You can go to the website above (don't worry, it's posted at the bottom of every message so you won't forget), click the modify button, and click UNSUBSCRIBE. You can also send a message (blank if you like, nobody will read it) to "stupidscannertricks-unsubscribe@egroups.com" . This is also in the site subscription notice you get when you sign up, and I've added it to the Stupid Scanner Tricks website where you first saw the subscription form. Be sure you send it from the same e-mail address you originally signed up with or

nothing will happen

So! Quick Review. 1) Go to website
http://www.eGroups.com/list/stupidscannertricks and select digest mode or
read on web. 2) if that doesn't make life peachy for you, unsubscribe by
sending a blank message to stupidscannertricks-unsubscribe@egroups.com or
from the website where you set the digest mode.

The changes go into effect immediately, you get what you want, I don't
have to hand hold anyone, and the list stays on topic.

844. [SST] Website copy-cat spoted

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-05-01 07:15:45 UTC
From: Rich Barron
Topic: 844 Message: 844

Thanks to the sharp eyes of one of the readers we've spotted a website copy-cat. Although I'm not opposed to other sites with similar content, I am bothered by (and legally protected against) sites that "copy and paste" entire pages full of information without permission and attempt to take credit for the info and earn advertizing revenue from it.

On the other hand, imitation is the sincerest form of flattery. I've been through this before and will probably go through it again.

I've included the letter I sent to the site owner explaining the situation. You can follow the saga along with me if you like.

Rich Barron
Stupid Scanner Tricks

April 30, 1999

Please be aware that the "scanner.gif" images you are using on the "FBInet" site (http://www.fbinet.demon.co.uk/) are copyrighted images and are granted use by permission only with conditions of use. I can find no record of granting permission for your site to use this image, nor are any conditions of use apparent on the site. For your reference the image in question is at:

http://www.fbinet.demon.co.uk/images/scanner.gif

The conditions of use after permission is granted are typically a direct link to the Stupid Scanner Tricks website, (http://exo.com/~rbarron) copyright information, or a combonation thereof.

Furtheremore, substantial portions of the "Scanner Central" section of your site are copyright of the Stupid Scanner Tricks website and Richard Barron and are not freely available for re-distribution in any medium without the express written permission of the author.

The pages in question include, but may not be limited to:

http://www.fbinet.demon.co.uk/scanner_central/same.html
http://www.fbinet.demon.co.uk/scanner_central/amusement.html
http://www.fbinet.demon.co.uk/scanner_central/earth.html
http://www.fbinet.demon.co.uk/scanner_central/fast.html
http://www.fbinet.demon.co.uk/scanner_central/other.html

The copyrighted content of the above pages needs to be removed from the FBInet site.

Thank you for your understaning,
Richard Barron

845. [SST] Re: More weird antenna connection stuff.

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-05-01 08:14:38 UTC
From: markes@cuintouch.net
Topic: 829 Message: 845

Keith, that "dead" cable jack may have been originally hooked to a rooftop antenna which is why it improved the reception. Note the difference here:
C.A.TV (Community Antenna Television) in it's original form is/was an antenna system mounted in a location such as a mountaintop to pickup broadcast signals and feed them to an area such as a valley where it wasn't possible to pick up the broadcasts directly. Such a system, basically a large version of the traditional rooftop antenna, would of couse pickup any signal of sufficient strength.
Cable Television: such as Multimedia Cable, Peak Cable, etc, pick up signals from different sources, local broadcast station, satallite feeds, pay-per-view movies, et al. These various signals are then filtered, processed (quite often having their original frequency altered, hence the need for "cable-ready" tvs) and then injected into a closed transmission system for distribution to their customers. If the system is working properly, then there is nothing on that cable that wasn't put there by the cable company. And I would imagine that any cable co. would be very unlikely to add law enforcemant or fire dept. freqs to their system. Quite aside from the possible legal ramifications, this would use valuable bandwidth that could be carrying a paying channel.

2. Using a t-adapter to hookup two scanner antennas at one time. Bill Cheek, noted scanner guru advises that this would actually adversely affect your reception. Skipping his technical explaination, it would change the nominal resistance of the antenna from 50 ohms, which is what the scanner expects, to 25 ohms. The mismatch would effectivly cut your received signals way down. To combine two (or more) antennas with a single radio, you need to use a signal splitter/combiner such as is sold for tv use. But watch the freq. range, the splitters sold for cable tv use only go to 500mhz. You need to get one that goes to at least 900mhz.

Mark in Oklahoma

We'll never forget. April 19th, 1995 9:02 AM

if you have a scanner that is not blocked in the 869-900 meg range than r.s. makes an hf/uhf/vhf antenna for about 18.00. it picks up pretty well in the ranges you are wanting - distance is probably at most 30 miles.

$300.each and I have 2 on hand but can get more. Yes they are fully functional. I do have to program the freq. here. You just have to send me a list of what VHF freq. and or PL tones (if needed).

Philip

Hello,
Does anyone know the frequency for the Cleveland, OH, fire dept.?
I mean the one that can be heard on a scanner. All Cleveland main freq's are
800 MHz digital. But there is a rebroadcast of the main fire freq. Thank
you for your help.

To my friends at Stupid Scanner Tricks: we had multiple F4/F5 tornados come tgrough Okla. last night. 40 people killed, 541 injured. 1500+ homes destroyed in 15 communities, and the severe weather is still going on. Anybody who would like to, please make donations to the American Red Cross or the Salvation Army. I understand that donations can be earmarked for tornado relief. The only other reputible organization doing work in this area that I know of is Feed The Children. Please, don't send money to individules or groups you arn't familiar with.
Thank you,
Mark in Okla.

Hey i got this idea tonight which i'm sure has been thought of before. If you got the right stuff from radio shack... couldnt you build a neat little device to scan/probe through a bunch of frequencies that would eventually find the one to open a garage door (like when you push the little button on the back of a garage door opener to program any particular frequency by pushing the button and it receives it) im not a technical guy i dont know much about the subject i dont know if maybe as a security feature it has to pulse or something to open the thing.... im probably confusing everyone but i just think it would be neat. In a richy suberb like mine people never lock the doors inside their garages.. they just leave their garage doors shut with their little code boxes outside with a cute little sense of being safe and go away for weeks at a time. I wouldnt really use this for anything criminal, juist playing jokes. i think it would be really cool to just drive down a street and make all the garage doors go up or down... anyways anyone know if this has been attempted before, or done? I'll quit ranting now.

I believe many of the new garage doors have codes and
you must know the right code to transmit or the door
won't open.

I am a member of a Tornado Chase Organization in the panhandle of Texas. I am also a ham operator. But I am unable to help you on ham/stormchase channels. Even large Stormchase units use CB radio for the most part, since you cannot expect all 200+ members to have ham radios, and usually the distance to communicate is less than 10 miles from vehicle to vehicle. My Association uses CB channel 15.
But some ham-clubs operate as spotters as a club. They would be using the regular repeater channel, or in extreme cases "RACEES" channels. But ham-clubs aren't the best spotters anyway. You want to listen to the sherriff units - since they are trained to spot and have the best repeater system of anybody out there.

Tom--
you must have a very people oriented and/or concerned sheriffs dept, for them to allow the use of their channel. In east texas, they would stop worrying about the storm and start looking for who ever was one "Their" radio freq.

Chris ---
In order to understand what kind of antenna would work better, we need to know what kind of frequencies you listen to. If they are mostly (50% or more) vhf high band, an 18 inch quater wave antenna will work best. I will also fairly good an the 400 and 800 range. If you are using the glass mount antenna, i recomend that you change.
Let me if this helps..

Purchase a 5/8 wave 2 meter (ham radio) mag mount antenna. Radio Shack
carrys them.
Sounds funny but it works good. It will pick up police communications in
the area of 150-160
exceptionally well.

Also it acts as a 1/4 wave antenna for the 40-50 part of the frequency
spectrum.
Good luck,
Terry

Ideas of this nature cause trouble.

How would it be if some other JERK, had the same notion and you ended up being the victim?

Most neighborhoods that are that up-scale, usually have alarm systems that call the local police dept or the technician that is monitoring that paticular customer will call the local police dept if the alarm goes off.

I don't think that I would want to be around when the cops come looking.

If you contact your local weather station, and take a course in weather reporting, like a lot of HAM's and non-hams do, then you can become a member of SKYWARN. Most of the SKYWARN nets are on some 2m frequency, while some others are on HF. Your local National Wx office will have this information.

Well, like... on my garage door opener to program in a NEW controller you push the green button on the back and then it listens and then you push the button or code or whatever and then it accepts that code or frequency as its controller, it can even have more than one.. so i dont know how it could be done by codes, i mean it could but it uses radio so somehow there should be a way to dupe it... ehh who knows im not gonna take the time to figure it out it was just a brainchild of mine.

878. [SST] Re: Storm/Tornado Chasers on Ham

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-05-06 02:42:39 UTC
From: MalachiQ@aol.com
Topic: 862 Message: 878

Another one to look out for is a Tornado group that is based around Ham Radio, called "SKYWARN". These frequencies vary, and are usually (And I use that term loosely, due to EVERYWHERE is different) on the 2 Meter Ham Band, which is 144.0-148.0. Another section you may want to try is the 70cm band, which is 420.0-450.0. (These are all in MHz) If you want to find out for sure what frequencies are in your area, check with your local skywarn group (Which can be found at www.skywarn.org), or just browse around Yahoo.com under keyword Skywarn for your general area. I think they have abound 30-40 listings for states, and numerous listings after that. They are especially heavy around the "Tornado Alley", and the Great Lakes, where tornados are most likely to form. If you need any more help with this, feel free to write me, and I'll help you out some more.

882. [SST] Best mobile antenna for 450 Mhz (trunk or rear window mount)

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-05-06 13:54:43 UTC
From: Chris Dailing
Topic: 882 Message: 882

Hello all...
I'm looking to put a mobile antenna on my new '99 Civic. The new Civic's don't have any antennas on them at all; they use a window grid antenna located just above the defroster wires on the back window.
I'm looking to either:
1: use the AM/FM radio antenna with a Y adapter.
2: put a "through the glass" cell look a like antenna on the back window (but I'v hear that doesn't work that well)
3: Put a GOOD NMO mount on the trunk and get a GOOD 450Mhz antenna on it.

I'm looking for the 450Mhz band because I like to listen to the news stations here in baltimore. I have also heard the local traffic choppers on thise freqs. Does anyome have a list of these freqs. ?

Thanks in advance
-Chris Dailing

> An NMO mount antenna would be the best. If you are always in the city, unity gain is fine, the length would only be approx 6". You could put on a
3dB gain. That would improve your receive, if you commute great distances from
the source you are trying to listen to. It would also help you hear the mobiles, if they talk simplex alot.
Another antenna to look at is the hidden mobile antenna by Grove. It is a wire that runs the length of the interior your car body and ends at a grounding point. You can find it at there web site <grove-ent.com>. Hope this helps.

Yeah, since we live in a rural area with not many frequencies to use, we have to use the sheriff's frequency. Plus we have a small weather data station in our courthouse that is hooked up to the latest doppler radar and various other things, and the national weather service is in constant contact with us. The only repeater they have on the courthouse is the sheriff's--I just hope nobody does misuse it.

This is not my point, obviously i would never use it to break into ANYTHING... and im sure it could be used maliciously but then again so could everything. If i really wanted to get into a house i could break a window rather than spending time and money developing a superelite garage d00r 0pener.... and i'd hate to end up being the victim of course... i was wondering if this is possible. I am the most anti-hate and anti-crimes (that hurt other people) cuz i dont believe in that stuff anyways im getting really off topic thats enough of this i was just wondering if it was possible sorry to make myself look criminal but then again 99.999% of us i'm sure have scanners in our cars anyway and thats illegal in alot of places... the other .0001% are you ham operators out there (oi!) anyways im totally done talking now. All I had to do was clear my name cuz im non-violent non-malicious pro-inquisitive/educational

John, I don't know what kind of ham groups you have in Texas, but here in the Tulsa area and most of Oklahoma hams are trained spotters by the US weather bureau. In fact we have a station set up in the weather bureau and is known as WA5LVT, Tulsa Weather". Not only are we trained in storm spotting, we have been trained by local law inforcement instructors in Haz Mat, Crowd and traffic control. The wx bureau here does the dispatching to the RACES hams to report suspected vortex's.

Our 94 repeater extends out for a distance of about 75 miles and all county civil emergencie centers are hooked up to and operated by ham radio operators. Not only are the local police departments tuned in to the ham repeater, the local radio and tv stations listen to out transmissions made by the spotters.

CB in our case in of no use at all. Static renders it useless during a storm, whereas the fm used by our repeaters is not affected. Also, just try and get a cb signal past your attenna during a heavy rain storm or air enfluenced by electromagneric charges. Impossible.

When our ham trained spotters report a tornado on the ground, law enforcement and the media take it as gospel. We are constantly attending update classes sponsered by the wx bureau.Our reports instigate cival officals to set off the warning alarms. I would recommend your becoming involved with your local RACES group and receive training and become a certified spotter. There is more to filing a valid and viable report than saying, " Hey, I see a low hanging cloud". We need more licensed hams out there spotting. Also, we need more people to become hams.

Just to keep the record straight. I own two CB's and two scanners.

FYI: Monday's tornados here in Oklahoma, which were extensivly tracked by volunteer ham spotters, Okla. County Emergency Ops spotters, Okla. City media, and various storm researchers, had windspeeds measured by a new portable doppler radar unit at 318mph. This unit is operated by the University of Oklahoma and the Severe Storms lab. These wind speeds put this particular funnel, when it was approaching southwest Okla. City, at the borderline of the previously hypothetical F6 tornado. According to KFOR-TV ch. 4 in Okla. City (www.kfor.com) this size is extremely hard to establish, as the destruction caused by an F5 is so complete that there is nothing left, property-wise, to provide evidence of the destructive increase of an F6. It was an exciting night to be listening to the radios. I had 5 different radios tuned to the various agencies and spotters, and it was like trying to listen to all the different conversations at a large party.

890. [SST] No Subject (Mobile Antenna)

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-05-09 19:39:30 UTC
From: CCyphers@aol.com
Topic: 890 Message: 890

I recently posted any suggestions for a mobile scanner antenna to use with my PRO-2046. For those who were wondering I enjoy listening to the local police, fire and rescue, highway patrol, local airport, and military airports, which is contained from 40MHZ to 500MHZ. My scanner range is from 27MHZ up to the 900MHZ range so any type of antenna that will cover this will be acceptable.

You might consider purchasing a commet TRI-BAND antenna. Covers 50mhz thru 450mhz, witch for receiving should be good enough to catch 27mhz thru 900mhz.

Don't remember the exact price, but I think HRO (HAM RADIO OUTLET) sells them. Try http://www.hamradio.com.

Good luck on your project.

well if congress passes the bill and it becomes a law i would say yes
then it would be against the law to buy,sell,trade any kind of radio
which is capable of recieving cellular or corldless phone frequenceis
(you probaly know this already but almost every programmable scanner
made today covers the 46 mhz cordless phone band.

if you have any questions feel free to write back

as of right now the bill has not been passed but soon something is
going to happen rather it be bad or good

In Fort Wayne In we use 146.88. Look in a repeater book at the library,
they list them nationwide and also state which are Skywarn and Races. At

John (Radar) Please respect the Spotters, a lot of them are the best, and in the tristate area around Ft.Wayne, In . Our NWS office spends most of the month of March and April going out and training spotters, many of us have done it for several years. Listening to 146.88 which is our repeater, will tell you conditions immediately, and also give out bulletins from NWS. We have a ham stationed at the NWS office, and when it is busy we have two people relaying msgs. back and forth. Many of our people go out and spot, even more of us keep in touch from our homes. Our NWS office can also contact any of us by phone at home or office.
To keep things straight we frequently sit next to law enforcement personnel during our trainings, and a lot of us take more than one class every year. I don't think you will find many false reports on our radios. Our repeater is 146.88 Diane KB9RRS At 01:29 PM 5/5/99 -0600, you wrote:

Hey scanner guys, 2 things:

1. Lay off Casper. He's just curious like all of us. Thats the common thread we all share: an interest in the wonders of radio communications and scanners. He sounds just like me, and it's his equisitive (sorry if my spelling is bad) mind and others like him that make this group interesting.

2. Thanks to who ever it was (i cant recall now) that corrected me on the NOAA voice thing. I really thought it was Fred, but someone sent me a sample clip of Fred and the real weather voice. Who ever you were, thanks. I love learning new things all the time on the group.

Thats it, later guys, and girls (if there are any)

Wasn't the original 46 - 49mhz set up as a CB band, and if so then the portable phones operating there are really CB radios?? If it is a CB band then that is primary and the portable phones (which are not licensed) are secondary.

Just a thought!

no the cb bands were never on the 46 mhz band. they cant have cordless
phones on a cb band or the other way around either,.. but the old cb
licenses were just a regestration--you didnt have to take a test or anything
like that so any one could have gotten one but the cb bands were never on
the 46mhz band anyway

From: David Ian Easton
Topic: 758 Message: 907
Attachments: 1 described; 1 payload recovered; 1 recovered file is retained separately and not shown in this PDF

Wasn't the original 46 - 49mhz set up as a CB band, and if so then the
portable phones operating there are really CB radios?? If it is a CB band
then that is primary and the portable phones (which are not licensed) are
secondary.

Just a thought!

That's good Thinking, But keep it in Mind that all the people runing the Show have Cord
Less phones so that will change the Rules to Sute them Self.. :(

Check your local Radio Shack store, they have a book called "Police Call".
It lists all the frequencies for fire, ems, police, air etc. for a particular
region. I have found it very informative and it only cost about $20.00 or so

What: stand up comics
frequency: cordless mic freq.
body: This was taught to me by a guy who works in a hobby electronics
store. Some comedy clubs use cordless mics on stage. Find the right
frequency with a counter or try the ones listed here. Then get one of
those Motorola handi-talkies and key up the same frequency and heckle the
comic from his own mic! "Bad comic, this is GOD. Get off the stage!" I
suggest only doing this if the guy shouldn't have quit his day job in
search of his dream of being a stand up comic.

This is an excellent page, but I think it should be expanded to include
Stupid Electronics Tricks. Here's one to start with...

A few years ago a friend of mine and I went to the movies to see The Hunt
For Red October. We brought along with us one of those lazer pointers and
pointed it at Sean Connery's head for about 35 minutes...then we got
thrown out.

Here's another, albeit a childish one: If you have thee-way calling, call
two people who don't know each other and remain quiet on the line. Listen
as a riot ensues as to who called who. "You called me!" "No YOU called
ME!" This is even more fun if you call two branches of an identical
business, i.e. two McDonalds', Stop N Go's. Be aware though, many folks
now have caller i.d. Damn!

Keep up the good work!

Todd Wiese - Holland

P.s. The Dutch do NOT throw their expensive equipment against to wall
just to hear it crash like the Deutchers do.

919. [SST] Uplinks to NOAA, like when weather knocks out their VHF transmitters

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-05-14 19:47:02 UTC
From: marnells@snowcrest.net
Topic: 919 Message: 919

NOAA generally uplinks to their 162 Mhz transmitter sites using freqs in the 409-420 range; these freqs are also used to relay to more distant transmitters. So if you're near a NOAA weather office...or in line to a transmitter site try some of these: (It also works when the 162 MHz transmitters get knocked off the air...like when the WEATHER is bad)

410.10 416.375 419.325 418.900

or just do a search between 409 & 420, using 5 khz steps if you can.

What: scanner/monitor
frequency: 88-108
body: First,you take a $5.00 kids mic then you take the mic piece off
change it to a phone wire with a modular plug on the end of it.
plug it in to the phone line tune in the freq. presto you have a speaker
phone or you can hook it to your tape recorder and record
the whole conversation.It only has a 50 to 100 foot range.You don't
have to unplug it unless you have a problem with your phone line.

From: From: SiScanner
Topic: 928 Message: 928

Hi I live in the N.Y.C. area and in yankee stadium they have a waiter / waitress service in the "mvp" section it's new. The people hold a transmitter it's not voice it's a screen which is set up to work w/ one of thoes pens. WHAT Frequency DO THEY OPERATE ON??!! P.S. are they digital? What brand are they ? do they work far? where is the receiver for these devices?
ALL INFO YOU HAVE ABOUT THESE DEVICES IS WANTED

Please help me thank you!

Yes these type of menus are digital and more than
likely they use wires and are connected to a network
sever somewhere in the building.

Hi guys (and gals),
I have a technical question on something I have been hearing on my scanner. This scanner has a
feature that warns you when you come within 3 miles of an active police vehicle repeater.

On the frequencies programmed as priority in Maryland, when I am near Hagerstown, I hear a morse code
station ID with the local NOAA weather radio in the background. Any commments on what causes this?

Thanks,
Terry

>You may be experiencing imaging. What is the programed frequency? What is the NOAA frequency? What is the IF frequency of the scanner? If double the IF fequency is equal to the difference between the 2 received frequencies then you have imaging receiving happening and are close to both transmitters.
for example
NOAA = 162.400
Police = 140.800

Diff = 21.600/2 =10.8
An IF of 10.8MHz is common in scanners.

I got one the other week. I like it. The current software is DOS only and limited to cloning and programming. I talked to ICOM at the Dayton Hamvention and they said there would be Windows software coming out soon. My version (Canadian) is full coverage, not cell blocked.
I have no compaints except it lacks a keypad.

IF means Intermediate Frequency and you are usually interested in the
first IF. Your owners manual should tell you what the IF frequency is.

Military Air frequencies no not likely, although there is SOME military air comms on civilian air frequencies. There are other forms of military comms on other frequencies that may be receivable depending on your location. There are lots of frequency reference books available that you can use to find the frequencies of interest.

949. [SST] northern states festival freqs

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-05-31 20:26:05 UTC
From: Casper
Topic: 949 Message: 949

i scanned out a few frequencies when i was bored and drunk at edgefest this year in somerset wisconsin

One somerset police frequency is 155.8650 I heard them say a plate number of someone they had pulled over and then we drove by it and i told all my friends what it was and they were like whoah you're cool anyways enough of that hahah

somerset police (one of their freqs anyways): 155.8650
Sunrise and Float-Rite campground security: 483.2500

the security one is fun because it makes you realize how the security guards really dont care whos underage drinking and what not, they just talk about food and chicks (i.e. hey there sure are some nice tits down in section blah blah blah) anyways im gonna quit blabbling and go to sleep good night -Casper

Many military freqs are between 40-46, 148-150, 163-167 mhz. If you are having trouble with these feqs you need a new scanner ! But the military freqs usually not available to most are the 200 and 300 mhz AM aircraft channels. Here I am sorry I don't think your scanner has access.

952. [SST] Hot To Get Off The List

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-06-01 02:11:02 UTC
From: Rich Barron
Topic: 952 Message: 952

If you do not want to get all the e-mails this list generates, take a deep breath and try these things in this order:

1) go to:

http://www.eGroups.com/list/stupidscannertricks

This is not the Stupid Scanner Tricks page. It is a seperate page that has some pretty nice features. (Calendar, on-line poll, etc.) One of the main reasons I picked e-groups is because of these nice features. Click the MODIFY button to change your individual settings.

The best one is the DIGEST feature. You have 4 methods of getting the messages from this list. The default is individual e-mails. That will throw every message from the list to your inmail box and get you all huffy (well, some of you who are now gone! :)) You can also choose a daily summary or full text digest. This will take either the subjects and first sentence (summary) or the entire messages (full text digest) and compile the entire days worth of messages into one (yes one) e-mail message. This is what I use for a number of mail lists I am on. I still get all the info, but I don't have 150 messages a day to sort through. Every person who asked to be removed from the list was set to individual e-mails. Move to a digest mode and see if that helps (it will) because you probably enjoy the information on the list as most people do, but don't like the bulk of a lot of messages sent to you every day. This soves both problems.

2) If you still don't want the digest sent to you, there is another option available at the website: "Read it on the web". Just what it states. You go to the website (above) and read the messages on the web. Since you are still subscribed you can post messages at the website just like you would from your e-mail program. If you are not subscribed you can only read the messages on the web - not post new ones or take part in other fun stuff on the e-groups site.

3) If your ex-wife signed you up to this list and you are a entemologist in South Africa and have no use for this list whatsoever, you can unsubscribe yourself IMMEDIATELY two ways - neither of which involves me or posting to the group. You can go to the website above (don't worry, it's posted at the bottom of every message so you won't forget), click the modify button, and click UNSUBSCRIBE. You can also send a message (blank if you like, nobody will read it) to "stupidscannertricks-unsubscribe@egroups.com" . This is also in the site subscription notice you get when you sign up, and I've added it to the Stupid Scanner Tricks website where you first saw the subscription form. Be sure you send it from the same e-mail address you originally

signed up with or nothing will happen

So! Quick Review. 1) Go to website
http://www.eGroups.com/list/stupidscannertricks and select digest mode or
read on web. 2) if that doesn't make life peachy for you, unsubscribe by
sending a blank message to stupidscannertricks-unsubscribe@egroups.com or
from the website where you set the digest mode.

The changes go into effect immediately, you get what you want, I don't
have to hand hold anyone, and the list stays on topic.

if you own a scanner bought in the u.s. that was made in the last couple of years (the pro-2050 is one of them), most freqs. that are off limits are going to be blocked. ex. 200-400 mhz, 850-900 mhz. most of the "hearable" military is going to be in the 250-400 (A.M.) mhz range which i believe is blocked on the 2050.

the 2050 is modifiable to pick up the freqs you are looking for - NOW - THAT IS ILLEGAL.

It is not illegal to own a scanner that picks up cellular freqs. or conversation, as long as you do NOT disclose information or arrive at scene. However it is illegal for a store owner to sell new scanners that have unblocked cellular conversations.

You guys in the US want a good trick. Here in Canada Scanners aare
legal. I know a store Atlantic Ham Radio in Toronto that sells the best,
most high tech scanners in the world! ranging from $350 to $2000
handheld scanners. Even the $350 scanner can beat the $350
radio shack and $400 Uniden Scanners. Tell your friends. If you have a good
scanner you dont't need attenna and
tricks! Just buy a $350 scannner, no modification required!
I purchase one and it kicked good. If you dont believe me call Bell Canada
for Atlantic Ham Radios Phone #. (Note: This is not an advertisement and I
did not use any swear words. This is the best trick!)

Actually, it is not illegal at all EXCEPT if you listen to Cellular frequencies. That is the ONLY band that is prohibited by the ECPA (Electronics Communications Privacy Act).

Almost correct. Cellular freqs are forbidden, but cordless are only covered by the Communications Act of 1934 as amended, ie LISTENING is legal, disclosure is not.

Not quite true. The 1986 ECPA, as amended (about 1995 or so) makes it specifically illegal to monitor CORDLESS phone calls as well as CELLULAR.

Harry

From: Harry Marnell
Topic: 957 Message: 970

Almost nearly correct. Here's the text from the ECPA as amended: (heavily snipped)

"UNITED STATES CODE

TITLE 18. CRIMES AND CRIMINAL PROCEDURE
PART I--CRIMES
CHAPTER 119--WIRE AND ELECTRONIC COMMUNICATIONS INTERCEPTION AND
INTERCEPTION OF ORAL COMMUNICATIONS

Sec. 2511. Interception and disclosure of wire, oral, or
electronic communications prohibited

(1) Except as otherwise specifically provided in this chapter any person who -

(a) intentionally intercepts, endeavors to intercept, or procures any other person to intercept or endeavor to intercept, any wire, oral, or electronic communication, or .....

[here it goes into divulging, using the info etc]

shall be punished as provided in subsection (4) or shall be subject to suit as provided in subsection (5).

[here it gives a bunch of exceptions, such as with a warrant, phone/radio techs, etc]

(4)...

(b)...

(ii) if the communication is the radio portion of a cellular telephone communication, a cordless telephone communication that is transmitted between the cordless telephone handset and the base unit, a public land mobile radio service communication or a paging service communication, the offender shall be fined under this title.

[that part distinguishes from intercepting from a wireline directly, where the person can be fined or imprisoned up to a year, or both]

BUT, so far anyway, it also says, in

(2)
(g) It shall not be unlawful under this chapter or chapter 121 of this title for any person -

(i) to intercept or access an electronic communication made through an electronic communication system that is configured so that such electronic communication is readily accessible to the general public;

(ii) to intercept any radio communication which is transmitted -

(I) by any station for the use of the general public, or that relates to ships, aircraft, vehicles, or persons in distress;

(II) by any governmental, law enforcement, civil defense, private land mobile, or public safety communications system, including police and fire, readily accessible to the general public;

(III) by a station operating on an authorized frequency within the bands allocated to the amateur, citizens band, or general mobile radio services; or

(IV) by any marine or aeronautical communications system;"

I think the confusion about cordless comes from the fact that when the ECPA was first enacted in 1986, it had just the opposite wording about cordless...it specifically EXCEPTED transmissions between a cordless phone handset and base from the prohibited acts. But they turned that around completely in 1994...

Probably the best frequencey guide out is Beyond Police Calls upgraded yearly and available at Radio Shack Stores. If you are a Ham (which if you have a scanner that you carry anywhere you legally need to be)you can get a cd with more frequencies than you ever thought you could need or want. There is also a huge gray covered book with a state police officer on the cover available, but I don't know where my copy is at the present time. The internet also has state sites and at least the Indiana one is excellent including the update monthly.

One last thought if you are a Ham carrying a scanner or tuned to scan police and emergency freq. other ways, be sure to make a wallet size copy of the scanner law for the areas you are traveling in Otherwise some law enforcement officers will confiscate your equipment if they stop you and have reasonable cause. A hardcopy of the law clarifies a lot of things quickly. I understand Tn. and possibly Ky. are really interested in controlling our listening .

As a part of Skywarn, I would not bother listening to NOAA, for immediate response,find out your local SKYWARN or RACES freq. They will tell you to the minute what is going on and where. Don't worry about nitpicking information, most net controllers will cutoff anyone tying up the frequencies with things not deemed important. These are the guys and ladies who when the weather people say a spotter reported seeing are referring to. NWS will sometimes use our reports to issue warnings. We do have creditability. Just monitoring the SKYWARN Freq. should let you personally know when to take shelter.

You DO NOT have to be a ham to listen to Police Fire Ambulance etc.
It is even LEGAL in Canada to listen to Cellular and Cordless Phones.
IN CANADA
IT IS LEGAL TO LISTEN TO ANYTHING THAT IS NOT ENCRIPTED OR SCRAMBLED AS
LONG AS YOU DO NOT DEVULGE WHAT YOU HEAR OR MAKE PERSONAL GAIN OR PROFIT
FROM INFORMATION GAIN BY LISTENING TO YOUR SCANNER.

Probably the best frequencey guide out is Beyond Police Calls upgraded
yearly and available at Radio Shack Stores. If you are a Ham (which if you
have a scanner that you carry anywhere you legally need to be)you can get a
cd with more frequencies than you ever thought you could need or want.
There is also a huge gray covered book with a state police officer on the
cover available, but I don't know where my copy is at the present time.
The internet also has state sites and at least the Indiana one is excellent

984. [SST] Text of ECPA: Cordless & cellular monitoring prohibited

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-06-08 07:41:04 UTC
From: Harry Marnell
Topic: 984 Message: 984

Here is one source for the text of the ECPA as amended in 1996. The 1996 amendment added the cordless phone prohibition, among other things, in this part of 18 USC 2511:

(4) (B) (ii) if the communication is the radio portion of a cellular
telephone communication, a cordless telephone communication that
is transmitted between the cordless telephone handset and the
base unit, a public land mobile radio service communication or a
paging service communication, the offender shall be fined under
this title.

Prior to that, listening cordless phone conversations has been specifically EXCLUDED from being illegal. In 1996 it was turned around. There are several sites on the web with the ECPA text, but look carefully to be sure they include the 1996 changes (as listed at the very bottom of the text).

When you bring up this site, do a "find" or "search" with your browser's edit or tools function, looking for the word cordless...it will help you wade through the rest of the junk.

Here's the URL:

http://trac.syr.edu/laws/18USC2511.html

Are we coming to the end of this thread yet?

Steven,
If your personal gain is the result of ambulance chasing, tow trucks showing up at an accident site, or being a burglar, etc., I would say you have a problem, other than that, probably not.

-So, ideas of this nature cause trouble. Well, you may be right, but
people like Adolf Hitler, Josef Stalin, and Benito Mussolini created
governments with the same motto. Beware of ANYONE that tells you "An idea

of this nature will cause trouble." They said the same thing to Coppernicus, Columbus, Euclid, Newton, Euler, DaVinci, Einstein, and Tesla. While Casper has not yet demonstated an idea that will change time, Howard HAS demonstated his fear of someone elses knowledge. Those who oppose knowledge fade into time while those who encourage it go down in history. After all, can any of you remember (without looking in a book) who ruled Spain during the bloody Inquisition? Remember this before you try to stamp out another persons ideas, even if they may be foolhearted.

Unfortunately almost all the scanners sold in Canada are manufactured in
or imported through the USofA and are affected by that stupid law
banning the capability to receive cell frequencies. SO we can listen up
here if the radio is capable of receiving the frequencies. BUT if they
are not capable then we cant listen. Not the law just the logic.

sure they do... it's www.radioshack.com but you have to link all over to find anything. The printed catalog is a lot easier, IMHO.

1010. [SST] cell phone scanners in canada

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-06-13 15:09:00 UTC
From: creme.brulee@sympatico.ca
Topic: 1010 Message: 1010

yep. it's legal to buy scanners in canada that'll receive cellular phones.
some of them are WAAAY expensive, but others are pretty cheap. check out
my absolute favorite scanner source http://www.durhamradio.com for tons
of cell-capable stuff. just be careful if you're taking it back over the border.

1015. [SST] This is DEFINITELY a stupid scanner trick.. :)

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-06-14 00:22:52 UTC
From: Daniel J. Karnes
Topic: 1015 Message: 1015

Howdy All,

This is a humorous but true story that I thought might tickle the funny bones of some of you SST types...

I used to work with two guys who deserve to go down in the annals of radio stupidity. I'll just call them Daryl and Allen. these two spent their lunchtimes sitting at fast food restaurants burping and farting and doing all sorts of other crazy stuff on the wireless mic freqs. They would say very inflammatory racial things to the customers and jam the customers and order really weird sexual acts and other fun things instead of food..

One day the manager at this Jack in the Box figures out that the same van (it was bristling with antennas) was there everytime this stuff happened and that the guys were there two or more days a week... One fine thursday afternoon right on schedule these two pull in and order then park and on comes the bodily function noises and orders for diarreah malts etc...

And out of the Jack in the Box comes five Anaheim cops with badges and guns and they are BUSTED.

A year later the Daryl character is sitting in the parking lot of a bowling alley in Orange doing the same thing on the Orange PD freq. Burps farts and the whole routine. A cool looking guy walks up to him and asks what he is doing and always the showoff Daryl shows him how he is disrupting the cops with his modified dual band HT... Cool looking guy pulls out his own HT a gun and a badge... And Daryl gets to talk this time not just to the locals but to the FBI, Secret Service and just about any other police and federal agency in the state that has ever had their radio traffic disrupted by a dork like Daryl. :)

If there is a moral behind this story (which is true BTW) please let me know.

Flames welcome.

-djk

1025. [SST] Please read: Guidelines for this list

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-06-15 04:02:51 UTC
From: Rich Barron
Topic: 1025 Message: 1025

Well, we have over 600 members on the list now. Not bad for about 8 months.

Many of you may be new to e-mail lists like this, others old pros. But here are a few tips for everyone to help keep the quality up and the bandwidth down around here.

First off, everyone should visit http://www.eGroups.com/list/stupidscannertricks at least once to see what all there is to offer. You may have to sign uponce to get a password - be sure to use the e-mail address that you are getting this list on or it may not see you as a subscriber at the website.

The above site will let you chose very cool options - digests modes or read on the web mode. This way you don't get 20 messages into your mailbox each day, but can still read the list messages in whole or in part. My favorite is the full digest. all the days messages get put into one e-mail and sent to you.

You can also - God forbid - unsubscribe from the list at the website. Plus there is a chat room, message archives to read/search past messages for questions that may have already been answerd, and a new database feature that I haven't really messed with yet.

As for the messages, try to keep the length down a bit by only quoting the relevant parts of a message before or after your comments. Nobody likes scrolling down to the bottom of a long series of messages that were quoted only to see someones one line comment. Plus some people get charged by the K of data transfer or have a mailbox size limit of less than a meg which may get overflowing with all the messages that are 90% quotes.

I am moderating all the posts to the list for only two reasons. 1) to weed out the remove requests before the bombbard the list. 2) to keep the list on a general topic and not a flame war or duplicate posts. If you post a message you will get a little not to this effect. Don't sweat it - 95% of the messages get approved. If you are cursing out someone or spamming the list with remove requests it will be rejected. Other than that I don't really care what you folks talk about as long as its civil. It's OK to stray off topic now and again on this list. It helps us get to know each other a bit. If it goes too far I'll let you know (or people will start complaining).

That said, Back to the list - and thanks for your support.

Rich Barron

From: Joshua@Hensley.net
Topic: 1026 Message: 1026

All i can say is to look for them on a search engine.. i just recently earlier this week found a whole 2 page list of fast food frequencies and I didn't bookmark it. Sorry....
btw i dont suggest abusing your ham
many of these frequencies use CTCSS tones anyways so they can not hear you. Also if your ham was a 2 meter, it probably would only pick up 40 % of the fast food frequencies.. many of them run around 30 Mhz and around 70 cm as well.

If I do come across those frequencies again I will be sure to post them up for you.

Joshua

If someone wants to do something illegal, that doesn't really harm anyone, that is there business, (I say this with complete belief, I'm a police officer) but I would not feel right giving people the instructions to do this mischief. At least let them work on there own and earn the punishment that they will soon receive.

1036. [SST] California CHP gives themselves away...

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-06-16 01:01:40 UTC
From: Daniel J. Karnes
Topic: 1036 Message: 1036

For those of you in California you should try listening to the CHP mobile
extenders. These are VHF simplex repeaters which are built into each CHP
car so the officers can talk through their high powered mobile radios with
a low powered VHF HT.

Frequency is 154.905 and what you'll hear is the CHP base station chattering
away whenever a CHP unit is within a half mile or so. (better then a bloody
radar detector if you ask me) the base transmissions are interrupted by a
"kerchunk" every second as the repeater looks to see if the cop is
transmitting
on his HT and if he is that gets repeated to base. The outputs of the
repeaters
are not PL'd but the HT's are (173.8 in So Cal) so that the repeaters dont all
key each other up and jam each other.

You'll be listening to whatever the main dispatch freq is in your area. I'm
not
sure but I think the cops can remotely change their mobile radios freq from
their HT's. Also not certain about this but I believe the mobile extenders are
on whenever the cops radio in the car is on.

Enjoy.

you must have missed the rest of the story... he transmitted on the drive through frequencies all the time.. probably got charged with operating unlicensed radios or something, also, he made rude noises, and etc on there... would you like to be ordering a big mac and have some guy come on and make burping and farting noises? i would think it to be funny for a few times, but after about a week, i would get a little annoyed. Especially if you worked there, and have to apologize to everyone how came through your line....

Howdy All,

Anyone know the USGS quake chaser freqs in Southern Cal? I ran across those
in somebodys scanner freq program a year or so ago and now I want them I cant
find the program or the freqs. :(

Anything for USGS and CalTech Seismo lab in Southern Cal would be appreciated.

Two thumbs up for Daniel J. Karns' message on CHP California extenders.
To put in simple words what he was explaining...
On one frequency you can hear ALL CHP police radios, no matter what frequency or channel they may be using at the time. If their radio is turned on it broadcasts ALL it's traffic sending and recieving over this extender frequency.
Problem: power is only 1/4 watt. But this can be a plus, not a problem, since it can easily be recieved at a distance of 1/2 to one mile with a standard roof mount antenna. This serves the scanner-enthusiast as being a "range-detector" in that; if you hear anything on that channel, then you know the radio is close to you. SLOW DOWN if you are speeding, then.
Not all states have this crack-in-the-armor to their police department communications.
John H.

What could they be charged with? How about Disorderly Conduct? Or Disturbing The Peace? Or Public Nuisance?

And, as for the idea that they arn't hurting anyone, what about the effect on the business? I'm sure it didn't help the sales during the time their juvenile antics were occuring. Probably make for a nice civil case if the manager decided to pursue it.

This is the same type of mentality that steals stop signs, moves barricades at road construction zones, or other "harmless" pranks.

Stupidity should be a capital offense.

Mark in Oklahoma.

Thanks Dan, Been trying to diagnosis the "kerchunk' sound on the CHP freq.
for sometime now. I had been completly stumped 'cause I never heard it on
any other channel. I monitor that channel in my car on the freeway for 'sig'
alerts and such but the noise repetitive noise is very annoying. Thought
there was something wrong with my equipt. Steve

The mobile extenders are like the old ham radio simplex autopatch units.
Used to be a lot of those floating around on the simplex channels and
probably still are a few. I don't know why they did it that way since as
far as I am concerned simplex repeaters are less secure and less safe
for a cop to use in an emergency.. But its their department and they can
certainly do as they wish.

Happy I helped.

To: rbarron@...

Below is the result of your feedback form. It was submitted by () on
Saturday, June 19, 1999 at 09:10:08

What: Anything you choose
frequency: Your decision
body: Did you ever want to have a real, working police radio? How about
a Wal-Mart radio? Well now you can have a transciever on ANY frequency
you choose. first get a set of toy walkie-talkies. you can pick them up
at wal-mart or k-mart for about $8, then take them home and open one up.
locate the crystal and replace it with one on the frequency your want to
monitor. now you have your own transciever on what ever frequency you
chose. the only problem is that it is very low-power. If you have a mod
for a toy walkie-talkie to make it more powerful please e-mail me at
DUKE181@...

P.S. I don't know the legality of doing this, I assume that it varies
from place to place. So if you do this and you get in trouble with the
law or it causes you and personal damage its not my fault. In other words
"DO THIS AT YOUR OWN RISK!!!"
Who: DUKE

1054. [SST] SCANNERS RECIEVING CELLPHONES

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-06-19 15:43:18 UTC
From: pro2046@hotmail.com
Topic: 1054 Message: 1054

I have seen the latest, topic on the list about cell phones. As I am a resident of Canada, I have bought three scanners at Radio Shack, and they are all capable of receiving cell conversations in the 900Mhz. If you look at the original package of the scanner, and see if it was made in the Philippines, I would try it out to see if it works. These scanners that I have are pro 66, pro 2040 and pro 2046. l.f.

154.905. It is a simplex repeater setup that you will hear when one is close.

Date: 1999-06-18 16:19:15 UTC
From: MJHolbrk
Topic: 1048 Message: 1056

The CHP extender frequency is 154.905
And to the person who misunderstood, concerning the drive-thru shenanegans, the cop who made the comment that "as long as it doesn't hurt anybody" did not mean what they were doing was harmless. He condemned their actions. He was talking about other SST tricks that are not harmful.

The logic board on the Pro-90 was purposely designed to make modifications difficult. This is due to the epoxy used to seal the CPU in place. The epoxy could be removed with some sort of solvent used by satellite dish technicians, but that's only part of the problem. The CPU is tiny and has 60 pins. Desoldering it, removing it, and resoldering another CPU with cellular band capability would be hard to do by hand.

Forget about picking up images too. The Pro-90 has triple conversion circuitry. Thus, images, including cellular ones, are virtually eliminated from reception.

If you want a simple method to pick up cellular signals with the Pro-90, just get a down-converter instead of trying any mods.

Hello All! I was just wondering if anyboby has any mobile data terminal frequencies or where I can find them. I have been a member of this group for a few months and possibly recall some talk about this subject awhile back. Anyway, send them if you have them. Greg in Boston.

My question for you greg is why would you want to listen to a MDT---all it is
is a bunch of data sounds --unless you have a decoder--
But to answer your question as best I can --you can find MDT freqs on the
same freq area as your local law/fire/etc freqs --they run on the same freqs
it is the computer system that seperates them .
Duke...........

does anyone know of where I can get the female antenna parts that go on these scanners. Uniden claims they do not have them.
My scanneres need the female part that connects to the boards inside.

Porche,
Easy, you just look up the TV audio carrier frequencies which always
end in 750, and you key that frequency into your scanner. It works
just like any other signal. If you want a list of the TV audio
frequencies, e-mail me privately.

Best regards,
John Winward, K3AOT

1084. [SST] Re: California CHP gives themselves away...

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1956-08-27 21:32:09 UTC [implausible archived timestamp]
From: John Ghysels
Topic: 1048 Message: 1084

It should be noted however that the CHP appears to be VERY diciplined in turning OFF the extender while they are IN the vehicle and on patrol.

They only turn it on when they stop and leave the vehicle. Thus, it's no protection against a ticket.

It is however, very useful for nearby hwy incidents. I've driven up to traffic "breaks" and road blocks and learned alot listening to the chatter on 154.905.

What: decoding pager messages
frequency: 153 MHZ uk
body: There is a prog called poc32 that you start up on your pc and can
decode pager messages!!
But first you must connect your scanner to you pc via your sound card
input. It is best to connect the lead to the scanner if you have a phono
output on the back, But the headphone socket will work it just makes the
process a little more complicated!
Tune your scanner to around the 153.000 MHZ band or what ever your local
pager company uses you will know when you have found it because
there will be a loud tone and then it sounds like a spectrum computer
loading. The audio levels will need some adjustment for this to work
properly, so a little time and patience is essential.You will know when
it is right because crazy messages start to appear...
I WILL E_MAIL THE PROGRAM TO THE AUTHOR OF THIS WEBSITE UPON HIS
REQUEST......

Actually, 450.850 is the audio portion of standard TV broadcast, i think.
i'm not sure which channel, though. i'm pretty sure that the channels 2-20
or so are between 470 and 512.

From: Mathew Dutra
Topic: 1102 Message: 1102

Hey guys,

I've got a downconverter that I built, but it has a very hard time picking up distant signals. I mean, if I'm in the same room with someone using a cell phone, I can get it no problem, but as for people across town, forget it.
I was wondering, what causes this? How can it be fixed? Would a preamp connnected to the antenna help? Its designed to mix down the 800-950 MHz range to 400-550 MHz, if that helps.
Thanks guys,
~mathew

PS- When you guys get any mods for the Pro-91, do tell!
PPS- Anyone interested in Central CA freq's (Fresno Area), I've got 'em.

Joseph Friend asked:
How can you change the year on recieving email?

Well, simple, if in fact you are refering to the fact that all of my emails
claim to have been send on or about 1956:
Let your internal clock battery die, and never bother replacing it.
Some days, I live in 1962, somedays 1958. But whenever there is a power
failure, or I unplug the machine, I get sent back in time to 1956.

What do you want to restore it to?

If you're talking about that 870-890 range, you'll have to settle for
a keyboard trick. Turn off the radio, then hold down the 2, 9 and
lockout
keys and turn on the radio. You'll get a couple of cellular
frequencies (maybe) and can program them into channels from the memory
channels (maybe).
Or you can search above 900 MHz and hear phone calls very clearly.

From: aronpryor@hotmail.com
Topic: 1107 Message: 1107

The reason you can't pick up cell phones across town is because cell phones can only go short distances. They actually call it a cell phone because the area is divided into several 1-2 mile cells (blocks). That have a tower and receiver on top that trades the conversation off to another tower when you leave its area. That's why a cell tower is almost on every street corner. Those things are popping up everywhere. Try around one of those cell towers around the 450-465 MHz area. I have also been able to pick it up by accident.

Most turn it off. But I've lately passed quite a few of their cars that were
happily chatting away there. Just a couple of days ago I heard a strong
signal there and when I went out for a drive I happened to see a CHP parked
in a stealthy spot waiting for speeders and he was indeed in the car.

Also, just a day ago on July 3'rd really late in the evening I noticed cop
lights outside and took a look and there was a CHP busting a carload of
drunks.
After they had the drunks car towed off and locked them in the back of the
car the CHP relocated a couple of blocks away to get out of the street and
continue the investigation with the local sherrif and the extender played
the whole time as the CHP was driving etc.

I was under the impression it was a built-in feature to the radio. Thanks
for the correction and the info. May I ask you how you know this, if that
does not affend you.
> John KD5DGW
>

Observation. We are policed here partially by the CHP and sometimes the
extender is on and sometimes it is off while the 45 Mhz side is chatting
away.

Some CHP cars always seem to be talking on 154.905 and others rarely have
anything going on there unless they are out of the car jacking up someone.

Hey techie guys out there, I wonder if you can explain this:

My friend got one of these cool little Nokia cell phones. It has a feature on it where you can choose between Digital and Analog.
Anyway, We set it to Analog, made a call, and got out the freq. counter. It measured up in the 800 MHz range. Pretty normal, I thought.
Then we set it to Digital, made another call, and again measured. This time, it was in the 300 MHz range, and jumped around quite a bit.
Does anyone know why it would do this? Why would digital be 300 MHz and analog be 800MHz?

As for the trouble I've got with the downconverter,(thanks to Aron for the explination), I've got one of those 100 ft. cell towers only about a mile away from my house. It handles digital and analog. Anyway, shouldn't the converter be able to pick up the signal from that tower too? It picks up the phones themselves fine, but why not the signal from the tower? And does it have anything to do with the thing I found in the 300MHz range? And do they make converters for that range? And why am I asking so many questions? How bout I stop now?
Good idea.

Thanks-

~Mathew

Your counter probably does not measure up as high as the phone is talking.

I believe PCS phones transmit in the 1900+ range. Great for warming up
your lunch! :)

Counter was probably overrange and/or showing a subharmonic. Kinda like
the old CB counters would when you transmitted near them with a VHF or UHF
radio.

i have a NEC forever page pager and the frequency is also around that range.
it has nationwide coverage, so you can probably pick up a lot of them around
that frequency.

Oh, never even thought about that! The counter goes up to 1.3 GHz, so I
guess it couldn't read that after all. So then is it ture that these phones
are really causing brain cancer? :^)

This is to announce the new formation of a scanner organization primarily
for San Diego County, CA, the San Diego County Monitoring Association.
However, we also have information that will interest scanner enthusiasts
from other areas as well, so feel free to stop by our site whenever you
like. Our site is geared towards both long-time scanner enthusiasts and
those new to the hobby. If you visit our site and you like it, be sure to
tell your friends about us. And, if you really like our site, become a
member of the SDCMA. There are NO DUES to join the association, so that
should make you're choice about joining even easier. We have a site for
just
our links which you can access from our main page, which will continue to
grow with time.

The url is:
http://www.members.home.net/sdcma/index.html

Thank You,

Steven Lindquist
President, SDCMA

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-07-07 12:33:19 UTC
From: John Winward
Topic: 1115 Message: 1132

Mathew,

I firmly believe these telephones are causing Cancer. I worked with Bell Labs 27 years ago developing what we know today as Cellular Radio. At that time, we did some animal experiments and there was definitely changes that occurred to the the group subjected to the 800 Mhz RF. I also had a friend, Mitch Goller, who was a Judge in NY City. Mitch had a 3 watt bag phone that he used constantly until he developed Cancer and died. The bag phones run up to 3 watts output, the handhelds about 150 milliwatts. As with any form of radiation, it's the cumulative effect that causes the difficulty usually resulting in cell heating and distortion of the actual cell membrane walls.. In other words, the less you use the telephone, the less your exposure will be. In an automobile, having an antenna on the roof will reduce your exposure considerably, however, how many times do you see people driving with a hand held right up alongside their head?

73,
John Winward, K3AOT

Below is the result of your feedback form. It was submitted by () on
Tuesday, July 6, 1999 at 23:41:52

What: Taxi's
frequency: 461.000 to 468.987
body: Rosemead-Geen Valley Taxi-461.200(they do all surrounding cities)
All Spanish

Montebello-Lucy's Yellow Cab-463.400(they do all surrounding cities),
They talk a lot of things over the air. Very slow business.
They only have 7 cars: L01 through L07
The owner, Lucy, drives either L06 or l07
Spanglish: English and Spanish

San Gabriel Valley Cab-464.450(they do all surrounding cities)
Spanglish: English and Spanish

If you would to scan through 461.000 MHZ and you would find all kinds of
Diffrent Taxi Co.

The codes they would use.(San Gabriel and Lucy's)
CHECK IT = UNDERSTOOD
HENRY = SAY WHAT
FLAG DOWN = SOMEONE WAVIED DOWN THE TAXI
YELLOW = CLIENT WAS PICKED UP
CLEAR = CLEAR

I will update. But I don't know how.

Try this page:

http://www.tstonramp.com/~salamone/southcal.htm

Lots of good stuff. The CDF freqs are there down a few pages from the top.

Just hit PgDn!

Enjoy. They've been very active lately...

Well, John, if using a 150 milliwatt or even a 3 watt, 800 mhz phone, why does the fcc allow police to use 25 watt, 800 mhz mobile radios or 5 watt portables? Even though the antenna isn't near the head, 1/4 watt opposed to 25 watts a few feet away, i would think would be more likely to cause cancer, if this whole cancer cell phone thing is true....

Wow! Thanks for all the info guys!

1. Thanks to John for his explination. My father uses one of those bag-phones all the time. I think I should let him in on what I've just found out. Thats cool to be able to hear something direct from the people who pioneered this technology. Thanks!

2. To Randy, I'm not sure what kind of Nokia it was. I know that he was with AT&T, in Central California, and set to "Digital only" mode.

3.To JuniorSJC, I hooked up a mobile CB in my room. All I needed was a 12volt 3 amp Power supply from Radio Shack and some more Coax to run the antenna up to the roof. The Power supply ran me about $40. It looks like a little box with a cigarettelighter-type plug and 2 screw terminals. Just hook up the CB power wires to those scew terminals, and you should be all set!

Thanks again guys!

~mathew

John,

I have an old article from a June 1961 issue of "Radio Electronics" magazine that documented a similar experiment as you have described above. Not only there could be possible long term effects, there have been short term effects too. Their cerebral cortex (brains) registered heighted activity causing more aggresive behavior when exposed to high power UHF/microwaves from 800 Mc on up. I got to look for the article but I think I can scan it in and it sould work as an attachment to my e-mails on the mailing list. Of course, there were no cellphones in 1961 but it is an interesting read for anybody who'd want to expose his brain directly to microwaves. Maybe that's why there are a lot more heinous crimes today, higher exposure to high powered UHF/microwaves, I really don't know, but it is a thought.

From: Tom Giffee
Topic: 1153 Message: 1153

Hello everyone, I have the Nebraska State Patrol Car frequency programmed into my scanner and every once in a while I get a signal where there is a short noise about 1 second apart, usually I lock it out because it interferes with the rest of the scanning. Then a minute or two later I turn it back to that channel and I still get the short noises but they are around 3 seconds apart. I was wondering if that is similar to the CHP thing you guys are talking about? Or is it some kind of interference?
Tom

PS Sorry about the limited use of "radio vocabulary," I just previously got into this scanning stuff.

Hello, I was wondering if anyone knows where I can find scanner software
that I can hook up my scanner up to the computer's line input, and then
decode sounds such as RTTY, Packet, CW, SSTV, etc... I need it freeware and
preferably Windows version.

BTW It does not have to be TX as well, its just for my pro 2036 scanner.
Thanks.

Thank you for your time, please reply to: Joshua@...

Topic: 1145 Message: 1162

Alright, you will need a power supply, you can get a fairly cheap one at radio shack if you are just starting, usually around 40 bucks. Then you will need a base antenna, I personally prefer my Amtron 99. It works quite well, and you will need about 50 foot of coaxial cable, 50-52 ohm, RG58 is satisfactory but super mini 8u is around the best.
You will also need an SWR meter (standing wave ratio?) I forgot what it stands for. With this meter you can adjust the feedback coming back to the radio, it basically measures the resisitance as far as I know. If you have an SWR rating that is too high, about higher than 2.5 or so, it is dangerous to the radio, and it can blow out the transmit transistor (AKA Final's). So it is critical that you obtain an SWR meter. If you have any more questions feel free to E-Mail me Joshua@... or KF6IZT@...
http://joshua.hensley.net

BTW if you would like to order any parts online, a fairly cheap place is Coppers Electronics, you can get a free catalog.
www.copper.com I think.

One solution is if you have the power supply out of an old computer,
you could run it on 120volts house current. otherwise, you'd have to
use an old car battery. GREG

Where can I get a scanner that will scan frequencies like the ones listed on the SST site? In the user section there are posts about scanning you computer CPU speed or scanning TV channels at freq that are not on normal scanners. Are there mods that you can do to the scanners to scan these regions? Also what scanners can be modded or have a backdoor to listen to cell conversations? And I am getting a new Uniden BC245XLT. Any comments on that?

You do NOT need a car battery to run the CB, nor do you need to rip out or salvage an old power supply out of a computer.
It is safer to buy a power supply from some electronics store... I hate to say this, but Radio Shack has a few you might be interrested in. Otherwise you can go to coppers.

You can go to radio shack and get a frequency counter, about $99.00
very slowly and throughly sweep THE WHOLE ROOM and the people in it. You
have to be very close. If it shows a frequency then that means something
is transmitting at the time. But be aware that hidden microphones can be
placed in a room and ran a long distance to a transmitter several rooms
away. You can also use a fm radio and turn and talk about the weather,
while you sweep the entire fm band, since alot of commercial do it
yourself bug kits operate in this range. Also pick up your phone and
dial someone and talk about a innocent thing while you do this same test.
If in either test you hear your self , your being bugged.On Sat, 10 Jul 1999

No real special tools just get a 12 volt power supply converter(110v to 12v)
from Radio Shack and a hook it up. If you want to move form house to car and
back. Get a male cig adapter to wire to your CB and a female to wire to your
12 V power supply. Also a magnetic mount antenna and you are set.
Hunter

I have a old catalog from a store called the spy supply. You can buy scarmblers, bugs, sweeps, etc... the sweeps range from $250.00 to $4500.00. The number listed here is (214) 392-I-SPY. They sent me this catalog for free, but it was several years ago.

try www.bander.com - they sell many different scanners - have ability to pick up the freqs you want. i have ordered parts from
them - they are very reliable.

I have an old catalogue from "THE SPY FACTORY" which was raided and shut down. It is now under another name according to Junior SJC who said it was now called "THE DETECTIVE STORE". I will dig around for it and send you mailing addresses and whatever. I am positive they can get you whatever you need.

I have a old catalog from a store called the spy supply. You can buy scarmblers, bugs, sweeps, etc... the sweeps range from $250.00 to $4500.00. The number listed here is (214) 392-I-SPY. They sent me this catalog for free, but it was several years ago.

Topic: 1183 Message: 1183

I am planning on writing a Scanner Application for the Linux OS and then I will port it to the Windows platfrom. It is going to be a simple application that you can enter frequencies that you store on your scanner into this program. You would enter the town name, call sign, freq, and service. Then after you have all of your frequencies entered you will be able to search the database of frequencies that you entered by callsign, freq, town name or service. That is what version .01 will include it will just be written in Perl at first then i will make a C++ version with a GUI for linux and Windows. the final release will include scanner controlling software for the BC245XLT and compatable scanners. Please drop me a line at slardy@erols.com if you would like this program I have not decided if it will be freeware or share ware. If you have any ideas please e-mail me them. If i use it I will mention you in the software. Thanks alot.

From: Travis
Topic: 1184 Message: 1184

I was thinking about getting a new scanner that has full coverage from 25-1300MHz but this means i need to get it imported. Has anyone ever ordered an imported scanner? How was it shipped? Was there any trouble getting it? I was going to get it from Bandercom.com its the Alinco DJ-X10. Any toughts? I dont want to order this and find that got taken away from me along the way by big brother. I have no intention of listening to cellular conversations but I just want a scanner that has full coverage in this area so i can do alot with it. The only disadvantage that i see in this is the fact that it does not have the ability to follow a trunked system. Is there some kind of accessory that will do that? It is also computer controled so maybe you could track with the computer. Please e-mail me @ slardy@...

Thanks a million

I Think that depends on what you really want to be doing whilst your are
sacnner :-) BUT!! most ppl prefer handheld scanner's they are very good
these days they have loads of freq range... So therefore I would have to say
(Finaly) that handheld are the go :-)

IMHO that would depend upon what your needs and intentions may be. If you primarely want to do ALL your scanning at home than a base is better. HOWEVER a portable scanner can be hooked to a base outdoor antenna and used in a base configuration. You can even usually buy a power adapter to use your portable as your base to save batteries. A base scanner CANNOT be hooked to your belt for an afternoon at whatever leasure activity you may want to take your scanner to. The bottom line is as above IMHO if you can only afford one scanner than get the best portable (handheld) you can afford.

Topic: 1186 Message: 1190

its not a matter of what is better
its a matter of convenience

If you would like to take the scanner around to places such as fast food, races, schools, whatever it is better to have a hanheld.

If you would like to hook up a base antenna and just scan frequencies from home such as police, etc... then it is better to get a base. Personally I have a base but you can hook your hanheld up to a base antenna just as easily anyways.

If i'm not mistaken, both are just as easily modifiable if not base.

1192. [SST] Re: what is better

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-07-13 12:41:20 UTC
From: John Winward
Topic: 1186 Message: 1192

Greetings,
That's a tough question, there are pros and cons with both types. A desk scanner has more audio power and usually is safe from being dropped or lost, a hand held offers pocket portability, but requires batteries that constantly need charging. In a power outage, the handheld will be welcome, and also offers the chance to be used on-scene, the small antenna however, usually limits performance. So to pick one over the other is a difficult choice, the best route is to have one of each type.

73,
John

> without the spaces?

Bad luck with actual tape recorders... They have poor sensitivity, and
especially with the nature of most transmissions, you usually miss the first
half-second of each xmit. At least with the $40 range that people are throwing
at you.

If you have a computer that you can keep running at night, I recommend wiring
your scanner to your sound card and getting RecAll, which is a small and very
versatile VOX audio recording program.

I wrote a small review and a link to it at
http://www.jerky.net/~romulus/useful/index.html .

What: Radio stations "open" mic
frequency: 460 to 499
body: When you're at a fair or event where there are radio stations
broadcasting "live," get ready to hear some real GREAT stuff! Go to where
they are broadcasting from and search the above mentioned frequencies. It
should stop on the "link" frequency that links them to the station to be
broadcast. After they finish doing their "break" on the air, most
disc-jockies simply lay the mic down on the table. They usually NEVER
bother to turn their mic down so they still have their mic wide open
broadcasting on the link frequency!!! Then the fun begins. Grab a corn
dog, some lemonaid and a comfortable seat where you can see the broadcast
booth. Careful not to be close enough that they notice you. Now watch and
listen to your favorite radio personalities making comments about people
passing by the booth... Oh yes! Hear how they feel about particular
woman, their boss, their marriage, the other woman, where the party is
tonight, what songs they hate and the list goes on and on. They are
usually

They are better at diffrent things. Let me explain, I go on ride-a-longs alot and a desktop scanner isnt the best thing to be holding while directing traffic. Make sense right (PLEASE SAY YES) The desktop scanner is great also if you want to station it to one room and have a verry long orange extention cord attached to it if you want to run to another room with it to show someone the action that is going on over your favorite frequency.To sum it up, (To make a long story short !!!)You actually might need both like someone else said.

I have found a hand held scanner the best due to its portability. When at home I plug it into mains power and when out and about I just use rechargable batteries. Just imagine if you hear something going on in your area and you want to follow the action in person as it happens but you cant because you have a base station !!!!

What: News anchors off the air"
frequency: 171.905 to 205.0/800to890
body: Before tv stations go on the air with their live news shows, the
anchors all turn on their wireless microphones. These mics transmit a
pretty strong signal and can easily be picked up out on the street near
the station's studio. You hear the best stuff when they are having a "run
through" before actually going on the air... and when they go to a break
and things are not going well during the show. Its so much fun to hear
your favorite news anchor cussing at a director or talking "stuff" about
the stories and people that they are reporting about. If you are a real
"Techno geek", bring along your hand-held tv and follow along. Fun for
the whole family!
Who: Former tv broadcaster

I am a liberal woman and find the choice of language in this posting highly offensive. For the record I am both a professional woman and the mother of an adult son. I can guarantee you if anyone in my life used this type of language, I would be sure that he knew it was unacceptable in such a way that it didn't happen again. It is also illegal to use such language on the air. Fortunately for the freedom of speech email isn't regulated and I don't want it to be. If webmasters choose not to force this type of thing to be cleaned up then eventually we will be regulated. Is that what we want? Personally I don't . If the language continues then I will have no choice but to cancel the page for all members of my intranet.

I have a responsibility for the quality of life, and I do have the power to block things to the intranet even if a member of my family tries to subscribe. I will also post this to my internet provider like I do all offensive email.

Please tell me this slipped thru twice accidentally.

I haven't read the story yet, but transmitting on a frequency that you are not licensed for is a federal offense. As a Ham, I value my ability to listen to what ever I please whenever I please, but I only transmit appropriate msgs.on the appropriate frequencey. I hope they fry the person using the radio inappropriately and spoiling it for the rest of us. Maybe if he likes the fast food frequencey so well they should have him work at a fast food establishment for a while and donate his wages to charity, plus give him a hefty fine.

Our beloved legislature is trying to regulate radio waves more and more, people who don't respect the law or themselves need to be controlled.

This is totally illegal under federal law. You are only permitted to use frequencies which you are licensed to use, and to use them appropriately, which includes no abbreviations or codes which are not in widespread use . Such as Q, Morse and 10 codes.
The Jack in the Box Manager would have been most correct in inviting the local FCC officers in to arrest the people. It would probably have made Americas Stupidest Crooks.

Those clowns were making life more difficult for all the rest of us who enjoy scanning appropriately. I bet they weren't even licensed to make the modifications they made to the equipment. That is if they owned it and hadn't stolen it.

It was all I could do not to copy your email to the FCC. Transmitting on
the fast food frequencies is totally illegal, and if you are a licensed Ham
who gets caught, rest assured you will no longer be licensed. I am going
to discuss this with some of my legal ham friends to see if you need to be
copied to the FCC. People like you are making radio difficult for the rest
of us.

1215. [SST] Radio Shack Moblile Scanner

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-07-20 05:29:29 UTC
From: Ted Sirek
Topic: 1215 Message: 1215

One neat thing I found while scanning the VHF air band on my Radio Shack Pro-2066 is that it's susceptible to Cell Phone image interference. I realize this can be attributed to parking near a cellular phone tower, so... does anyone out there from minnesota know if theres a cell tower in the vicinity of the Burnsville Center shopping mall?

Also, I was wondering if someone could tell me why in certain areas, I'm able to recieve what sounds like a religous radio station on exactly 44.46 Mhz on the same scanner?

Thanks, KC0FZZ

You can get a tech license now without learning code. I got mine back in the days when you had to get a novice license first and learn code at 5 wpm then get tech. Now you just test on theory and there is tons of stuff out there to help you learn it so I would say it is not difficult.

No Sir, I got my license in 77 and had to travel 100 miles each way and take the test at a Federal examination office that only gave the test every 6 months.
Now (99) you get study guides with the questions and the answers. You can take the test in about any town. You are not linited on how many times you can take the test in a given time. there are two testing groups the ARRL and the W5YI. Contact your local Radio Shack store for more local info.

From: NEDROG@aol.com
Topic: 1216 Message: 1232

No, it is not hard to get your license. There is a test or series of tests that you would have to take depending on the class of license you would be going after. Just like when you go to get your drivers license - each state requires that you take a written and road test. In ham radio you must pass both a written and code test depending on which class you want.

For example:
NOVICE 5wpm code & 50 questions on theory &
regulations
TECHNICIAN no code & 50 questions on theory & regulations
TECHNICIAN PLUS 5wpm & the GENERAL class written test
GENERAL 13wpm and the general class written test
ADVANCED 13wpm and the advanced class written test
EXTRA 20wpm and the extra class written test

With each class of license it gives you more operating privileges. Some of the classes only allow you to operate VHF frequencies, while the higher classes allow for operation on both HF and VHF. Again its just like getting your drivers license - 1 set of rules and regs for one class and another set for a higher set for example if you needed to have a CDL license. Learning the code is like learning another language, the more you study the better you understand it.

Depending where you live may depend on how much help you can get from the local hams. If there is a local ham club, it is possible that they run ham classes from time to time. If you are not sure of a ham club in your area, then go to http://www.arrl.org you can put in a request and they can tell you where the closest club may be. If you don't have a club in your area you can go to the local library for books.

If I can be of some help to you - write back.

73 - de Howard W3CQH
hammin since 1954

Some people's dirty words:
Whoever that was, has a right to say it the way he feels, wether to censorship him or not isn't a choice. There are hundreds of ways to get around him saying the f word and people say it in this world everyday. The thing I don't get is, its a word just like any other word, nothing but society and people make it "dirty". The word "chair" is no different than the "f" word, no matter than defining terms and meanings. And it isn't that hard to get the emails from this list and censor them yourself before moving them on to the rest of the place. Some day, it may be one of those people you watch for, will be using such language regularly.

Fastfood: I'm sure many of you saw the persons fastfood story of his friends getting busted for it, and we know its illegal. And then you see someone threatening to tell the FCC on the person who posted a response. Study the post some more, and unless you have the whole story like the subscribers who have been here longer, don't go threatening anyone.

Pressing numbers and turning on scanners:
On certain models, including Radio Shack's Pro-91, this can clear the memory. Its kind of a way to get into the programming mode, but that would require more equipment to do so. So doing this with the right numbers may just clear the memory, be careful.
Thats my post for the day in a long hiatus.
Bye,
Mark R.

Sorry people, but I disgaree with you. When I first saw the complaint, I couldn't even figure out what she was talking about. It wasn't the best choice of words I have to admit, but this has been blown all out of proportion. If he had said "sc**wing around" instead of useing the "f" word (which means the same thing) would there have been the same wave of complaints? I think if the guy were to publish an apology to the group for his choice of words then it should be dropped.

Frankly, I was alot more annoyed about the comment made in the discussion of what kind of scanner is better, base or handheld. On of the posters said a handheld was better because you could take it with you to see the action firsthand. This is called chasing calls and is the kind of thing that makes law enforcement and public safety people so down on ALL scanner owners. And it's against the law just about everywhere.

OK, off my soapbox now, thanks for reading this.
Mark

1238. [SST] The F word & Illegal Scanning

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-07-21 18:06:38 UTC
From: Mathew Dutra
Topic: 1238 Message: 1238

I just wanted to say that I agree with this woman on the "F word" issue. There are times where such language just really shouldn't be used. There are children on this email list that really dont need to hear that, and it really doesnt help us understand the problem any better.

As for the rest of her argument, I totally disagree.
This site and email list was made by scanner freaks, for scanner freaks. The whole reason that we are all here is to discuss scanning; its legal and illegal activities and all that good stuff. If she doesnt agree with what we discuss and do, then she shouldn't be here. The wonderful thing about freedom of speech is that no one has to listen. If she doesnt want her family or intranet accessing this email, then she is more than welcome to censor us from them.
But she has absolutly no right to threaten to "turn us in" to the FCC. Granted, her oppinion is very valuable and has as much right to be here as mine. But the entire purpose of this list is again to talk about "stupid scanner tricks" and thats what we do. If transmitting on a Fast Food freq and getting caught isn't a stupid scanner trick then I dont know what is. But to critisize us for discussing such things, well, thats just not right, and if we are so bad and shaming the Ham radio community by what we choose to do, then I'm more than willing to turn in my licence right now. But I think that Ham radio was founded on the basis of civilians experimenting with radio. It was true 80 yrs ago, and its still true today. The only thing thats changed is the technology. We all still have that curiosity. We all have at one point listened to our neighbors cordless phones, we have all driven 56 in a 55 zone, and we have all driven through a yellow light.
I dont know of anyone who hasn't done something illegal sometime in their lives. And if this is what we're going to be discussing for the next week or so, then let he or she who is blameless cast the first stone.

Thanks guys and gals,
~Mathew

David, I got my license with a lot of help from my husband. he passed his on the first try. I passed the first half of mine on the first try, but had to take the tech part passing it on the third try. I am now working on the general and eventually will get my extra.
I have no given mechanical or electronics ability, but the books are great. Four year old kids get theirs. It is possible although very time consuming to go that way. Take a good calculator, and try to learn the formulas (memorizing them should help write them down as soon as you start the test to prevent mind blank out)and also memorize the frequencey charts. If I was doing it over again, I would memorize the entire chart the first time, so I didn't need to relearn it for the general.

I agree with the COP. I have used several scanners. I like the credit card radio with an ear piece to monitor the weather frequencies in an emergency, like no bad weather anticipated. Let's face it, once you are used to having a radio it is like loosing an arm or leg without it. The CC radio will fit in a wallet which will fit in an area smaller than a pager. Men carry them in their shirt pocket or in a pager wallet, some even wear them around their necks. The handheld receives better, but is more cumbersome to carry, needing a beltclip which makes it vulnerable to theft or inside pocket, or a purse or lunch cooler purchased with a secure pocket to carry the radio. Portables are great if you have a license to carry one. A magnet mounted antenna increases your reception. they have the best reception of the three previousily mentioned. Personally if the weather gets bad, I will turn the HH (with an earpiece on during a break at work, or go out to the car and eat while I listen, this is great (surprisingly not everyone likes to listen to radios)and very relaxing. The volume on the desktop unit could be turned up so you can hear it in other rooms.

David,
No, it's not very hard, but it does take some
studying. You can get a "textbook" at most
electronics stores (such as Radio Shack) that will
help you a lot. I got the license that did not
include a Morse Code test, but I would recommend you
go ahead and take the code test too. 5 wpm is not all
that hard to grasp, and it opens up a whole new world
of radio. Go for it!
If you have further questions or if I can be of
assistance, email me at robw810@....

Well... I am a Volunteer Fireman in Ottawa Lake, MI (Right above the border
from Toledo.), and the way things go here is the first set of tones indicates
the station number and the type of emergency. This is sent to the pagers. The
second set of tones indicates the same thing, and is sent to the station to
activate the sirens.
The same exact message is read both times.

Actually, it is not illegal to record radio conversations, with the
clause of , never divulge the information to anyone or leave it where
anyone can find it. If you don't believe me ask Mr. Riley Hollingsworth ?

Yes, I got a nice motorola ht600 5 watt ht, for 200 bucks , with charger
and lapel speaker-mic, I also got a programmable uhf and vhf public
service band radios for 100 bucks each, and for anyone wandering, I am in
search and rescue so I am using them legit.
I am a ham operator, and cb or criminal band operator as well. It's
just like driving, if you get out on the road with a bad attitude, you
cuss and fuss and give the finger. If you are courteous and patient, you
drive along fine. Well the radio is the same way, just do unto others
....

Yes,
Most systems use DTMF tones to activate the sirens, they sound the same as pressing a button on your phone, quite different from the rescue tones you here. Am I right ?
Anyway, that is how most systems I've worked with use. Get wintone or a tone reading unit, it is really cool to have , if use by criminals they even get credit card numbers off cordless and cell phones with them ? If only I was a crook ?

They are better at diffrent things. Let me explain, I go on ride-a-longs alot and a desktop scanner isnt the best thing to be holding while directing traffic. Make sense right (PLEASE SAY YES) The desktop scanner is great also if you want to station it to one room and have a verry long orange extention cord attached to it if you want to run to another room with it to show someone the action that is going on over your favorite frequency.To sum it up, (To make a long story short !!!)You actually might need both like someone else said.

The_Cop Pages
Homepage | The_Cop's Forum |
The_Cop's Events Page |
The_Cop's Exclusive Chatroom |
The_Cop's Page Of Links

Not really a need for both, a handheld with an A/C adapter works just fine for me. And of course rechargible batteries. Steve

Topic: 1265 Message: 1265

I have to agree with the comment about callchasers, rubberneckers, etc. As I have been in law enforcement and emergency services for just under five years, I have seen a lot of accidents happen simply because someone was trying to gawk while driving. Words can't explain how aggravating it is to see the same vehicle pass by an accident scene five or six times; or for someone to step out of their vehicle after the situation is under control and start walking around, asking questions, etc. This is not to discourage someone who is first on scene from attempting to help accident victims, but if EMS is already there and you really want to help, keep driving. That's the biggest favor you can do for them at the moment.

1266. [SST] Realistic PRO2001

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-07-23 00:40:02 UTC
From: Robby Workman
Topic: 1266 Message: 1266

A friend of mine has a Realistic (Radio Shack) PRO 2001 Desktop scanner that worked fine until recently. All of a sudden, it won't respond to any press of the keypad. It powers up in the scan mode, and by lowering the squelch, it will stop on one of the frequencies. All of the frequencies in it now are out of the scanners receivable bands (ie- it receives 29-54 MHz; one frequency is 10.00 MHz). He first noticed this problem just after a thunderstorm. This makes me think it got hit with a power surge. My question is this: Has anyone ever had a similar problem, and if so, did you fix it, and if so, how? If not, does anyone have a schematic diagram of the scanner so I can figure it out myself? Thanks in advance, Robby

I live in East Texas and the warning sirens in our town are set off by using DTMF (like a telephone) tones over the channel, they use a secondary channel for this so that not evern one hears it.

I guess that it could be done with two-tone seq. paging like your pager recieves, just a matter of different hardware at the siren.

You'd have loved this really goofy looking totally fat guy I used
to see years ago in a little red volvo with a yellow lightbar and
big stickers saying "EMERGENCY VEHICLE" all over who'd show up with
those yellows turning and jump out with his CB walkie talkie barking
orders to REACT on ch 9 and occasionally to the EMT's and firemen.

He loudly threatened to "CA" me on the spot (found out later "CA"
was citizens arrest) for interfering with emergency personnel after
I busted up laughing at him when his five foot long walkie talkie
antenna poked a firefighter in the back. Don't know why those guys
tolerated that goofball.

Oh.. And yes.. He did wear a uniform that kinda made him look like
a cross between Howdy Doody and Roger Ramjet.

Haha keep in mind, as far as I know you only need a license to transmit on a ham, not buy one. But then again many places require your license anyways. Personally I don't believe in transmitting OOB frequencies.

BTW does anybody have any mods for the pro 2036? I am not looking for cellular mods, but maybe HF.
And also, when I unplug the scanner after like a few minutes the memories get erased, which should not be happening. I think that the internal battery is dying, but I have no idea what it looks like or where it is at.

Anybody care to share?

Received: 7/27/1999 10:45 PM
To: rbarron@...

Below is the result of your feedback form. It was submitted by () on
Tuesday, July 27, 1999 at 13:15:49

What: all frequencies
frequency: from what to what?
body: This trick is for those of you that can't afford a antenna for your
scanner or just don't want to buy one. If u have a tv antenna all have to
do is connect a wire from it to your scaaner it's in expensive and it
works. Another idea for those of you short on funds if you don't want to
buy a wire you can use the one you have. Just connect one of the
connectors that slides on rather than the screw on kind, preferably the
ones that have the split along the side, it may have to be streched a
little.

Who: R.E. from Tennessee

1277. [SST] Callchasing.....Are you that rude?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-07-26 15:15:16 UTC
From: Mark R.
Topic: 1277 Message: 1277

And I have to agree that callchasing is just morally wrong. Me and my friends were on our way to drop me off at my house, when an accident survivor waved us down to help. She was chasing some cute guy and went around a corner too fast, and ran the car off the road into a city creek. The creeks so low she wouldn't have drowned. She ended up physically okay, but she was emotionally distraught. Some chemical from the car was draining into the creek and the cars electrics were still on, and her purse was in the car. One of my friends shut off the car and got the purse. But this poor girl was so distraught, she was more worried about getting the car out of the creek and fixing it, so her dad and boyfriend wouldn't get mad at her. Of course we couldn't do that, it took more than 5 guys in a van to do that, it probably took a towtruck or crane. I had to stay right by her the whole time, to make sure she didn't get in her car like she wanted to, to make sure she wouldn't pass out, which she did, but I had ahold of her, and another lady was helping me to try to get her to lay down. My friends weren't sure what to do, but thats okay. The thing is, we must of had 20 people there, one with a digital camera, which the girl yelled at him for taking pics, and other gawkers. Plus the people slowing down or stopping to take a look. Now I've done such things like stopping or walking around a scene, not just car accidents, but what the guy with the camera was doing, just made me sick. And some of those people had to have scanners.
This has turned me off to stopping at a scene or such, you should just drive by as normal.
I stayed with the girl until the EMTs arrived and put her on a backboard, which is after she fell back into my arms, at least we got her to finally lay down. There was a pic in the paper of it, but that was after the EMTs left and firefighters and cops were investigating. I have that pic scanned, but debate on wether I should post it or not, or if it can be to this list. The point to this long post being, call chasing, is plain wrong, you get in the way of law enforcement and the other emergency services, and to be a victim of an accident, and see a bunch of people there doing nothing, but gawking, it just makes you sick.
Bye,
Mark R.

What? I am sorry but Police Call is really bad it's confusing, and hard to use. Also you said "the most comprehensive Frequencie guide in the world" oh yea sure it more comprehensive than an internet web site updated daily. Oh wait I am sorry Police Call does come out w/ updated issues often I mean how much sooner can you get that once a year you know daily or weekly is not that far away (a huh sure).

P.S. It's frequency not Frequencie

Hello,

I would like to invite you to join the NEXTEL1 mailing list.

The description of this mailing list is:

This list is for Users, Operator's, Technicians, Engineer's, Managers,
Sales
Person's and Buffs of Motorola's iDEN systems. The purpose of this list
is to
exchange ideas, advancements and information concerning iDEN Group's
Platform
and System Operators...Nextel....SouthernCommunications...and
....Clearnet....
Also the effect of ESMR on other technologys and Bands such as TDMA,
FHMA, PCS,
AMPS, NAMPS, GSM, CDMA, SMR, CMRS, LMDS and others. Provide an open
discussion
forum of other TYPES of Communication as it relates to iDEN. Discuss
FCC Rulings
and Proposals and their impact on the Wireless Industry.

You can join this list by going to the following web page:

http://www.onelist.com/subscribe.cgi/NEXTEL1

If you do not wish to join this list, please ignore this message.

Thanks,

List Owner

1288. [SST] one sided conversations in the 900mhz

Yahoo group: stupidscannertricks (1998 — 2000)

From: paul fladeland
Topic: 1288 Message: 1288

My friend and I were talking about cellular conversations in the 898-915mhz about when you can only here one person talking. One time I was talking to a person 600miles away, while my friend was scanning my call, and could hear the person 600miles away but couldn't hear me while I was only 10 miles away from the scanner. If anyone knows the answer please email the list with the answer. Also scanning in the 900mhz is LEGAL in my area as long as you do not tell what you have heard.

Paul

1289. [SST] cell phone mods

Date: 1999-08-01 22:45:05 UTC
From: paul fladeland
Topic: 1289 Message: 1289

I was talking with some friends about your basic cell phones. If your Motorola flip can access the 900mhz with a conversation, a mod could be made so you can use a phone as a scanner? It sounds kind of silly but I was wondering if anyone else knows about possible mods.

Paul

I can see where you are coming from there. it would be horrible to wake up from a terrible accident and find ten cameras in my face. But, for fire chasers I see no harm done as long as the spectators are kept at a reasonable distance away from harm or interference. GREG

When you say if you are on duty at thr time ? That is strange, because a person affiliated with public saftey will stop on or off duty, it is the law in most states ???
Must be an impersonator ?

It is most likely possible. I have also read about a copmany that makes cel
phones that you can pu into a test mode where you can do that.

OM,
What do you want to know, I've had one for about two years,
boy does it like to eat batteries. I started with Nicads but
only would get about 7 or 8 hours continuous use. Then I
switched to NiMh 1200 ma cells ($30.) that gave me about two
more hours. It just seems like all you do is charge the
batteries with that radio. It supposedly has a batteries
saver circuit built in, but this is my experience with the
PRO-60.

Paul,
This one is easy, you transmit on one frequency and receive
on another, I believe the separation is about 45 Mhz, the
conversation is not mixed until later down the line, even
wire calls are separated and then combined at the last
central office before going out to your house. Your friends
scanner stopped on the other frequency.

your scanner is hearing what the "cellular repeater" is sending back to your
phone.

I agree that the converter is a cheaper and more effective way to get the 800 mhz on 400 mhz, BUT, it also amplifies all the garbage as well, so if you want it for cell phone monitoring it is worth it, But be prepared for the spurious emissions to be amplified and intermod to increase greatly.

Bob,
Does your's like to drain batteries like mine does? It seems
like I'm always charging that thing. Right now I'm using
Radio Shack NiMh 1200 ma cells, I get somewhere about 7 to 9
hours continuous on a charge with them, the regular 600 ma.
NiCads were impossible.

>>so you can use a phone as a scanner? It sounds kind of silly but I was
>>wondering if anyone else knows about possible mods.

Paul - I have an old Motorola flip phone that can easily be converted into
a scanner, then back into a cell phone. All I have to do is bridge the 2nd
& 3rd battery terminals which puts it into "test mode." Then I type a few
commands into the phone and presto, I'm listening to cellular phone
calls. I've also been able to bridge myself into one once and talk to one
of the people in the conversation. So to answer your question - yep it's
possible and people do it.

1314. [SST] mods for PRO-2048

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-08-04 18:53:54 UTC
From: QScott12@aol.com
Topic: 1314 Message: 1314

Hi i just recently got into scanning. I bought the (on sale) PRO-2048 for $149. One of the reasons I thought scanning would be fun, was because of all the fun mods you could do. (I dont mean cell reception!!! I am not like that) But, I guess maybe this madel is too new(?) or something because I can't find any. Does anyone out there know of any mods or add-ons? Also, if anyone know a good software page, that wold be helpfull too.

~Scott Belsky

1315. [SST] Re: one sided conversations in the 900mhz

Yahoo group: stupidscannertricks (1998 — 2000)

From: Monica
Topic: 1294 Message: 1315

I would like to add that the reason you received only one side of that cellular traffic was this: The one you did not receive was 15 miles away, according to your message. Even if you were next door you would only hear one side of the traffic. But to hear that other side you would have to drop down 45 MHZ and be within 300 yards of the cellular phone transmitting. And even then, you need two scanners operating simultaneously on each frequency to get both sides.
Radar

1316. [SST] Watching

Yahoo group: stupidscannertricks (1998 — 2000)

From: jddougherty@earthlink.net
Topic: 1318 Message: 1318

I live in Santa Clara County, California.
I am new to scanning, have a few books on the subject, and I have a question.
I hear a standard ten code, like 10-8, which I understand, it is often followed by a letter suffix, eg: 10-8N Nora, or 10-8B Boy.
So far I have heard B Boy, N Nora, T Tom, R Robert, and some times Double N Nora, or T Tom times three. These suffixes are used by San Jose PD, Santa Clara Co. SO, Sunnyvale PD, and others in the area.
Does anybody know what they mean, or where I might look to find out.
None of the standard books available mention the subject.

Thanks
John

Thats Australia for you.
Where I live it is acceptable (by the police) to depart a scene especially if you run someone over, and especially if you run over an indigenous person. Too many people have lost their lives stopping to help, as the rest of the tribe members think it was a deliberate act. So if I am in civillian clothing I dont stop. But they will hide at the site of a uniform. I live in an area that has the highest murder rate in the country !!!

1321. [SST] POCSAG32 By Deti Fliegl

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-08-05 10:24:43 UTC
From: dustynet@freeuk.com
Topic: 1321 Message: 1321

Does anyone have the registration Codes for Pocsag 32

Or the location of and Flex decoding software which can run under
95/98/nt
with the use of a scanner and sound card?

Many Thanks

Dustynet@...

I think the reason is that the possibility of two people being there at the same time is very low. How about we all go there at 8:00PM tonight.

1324. [SST] Re: walster none's reply

Yahoo group: stupidscannertricks (1998 — 2000)

Aha... obviously someone has struck a nerve here.
Anyone affiliated with public safety understood that
Blundell meant that there are already emergency crews
on the scene. We are not bound by law to stop and
assist if the necessary personnel are already there.
Besides, there should be no confusion here... I
clearly stated in the second post regarding
call-chasers that nobody would have a problem with
passers-by stopping to offer assistance prior to the
arrival of appropriate authorities. Apparantly this
whole discussion has offended some people on the list,
and to those people, well, get over it.

PS - in many larger cities, off-duty personnel are
forbidden from responding to incidents except when
requested (this does not affect someone passing by and
stopping BEFORE on-duty personnel arrive). Typical
situations where the city would request off-duty
personnel would be large-scale disasters, officer in
distress calls, multiple-alarm fires, etc.

SINCERELY,
Robby Workman

I can speak from experiance that the down converter from Ramsey is good, but it really does amplify spurious emissions, so much so that sometimes I will have to constantly keep my finger on the Down button to manually skip over them. Another thing to consider about this unit is that apperantly it does not work well with some scanners. For Example, I originally bought it for use with my Pro-91, but found the hard way that this scanner rejects the type of image that this converter creates.
Dont get me wrong, its a great little unit, and actually pretty fun to build I might add. It cost me somewhere around $50 for the kit, and I think something like $100 for the pre-assembled.
If anyone would like to check it out, or anyother Ramsey item, the entire catalog is on their website and avaliable for download in Adobe Acrobat (.pdf i think) format. THeir address is at www.ramseyelectronics.com

(I really hope I spelled Ramsey right!)

I agree that the converter is a cheaper and more effective way to get the
800 mhz on 400 mhz, BUT, it also amplifies all the garbage as well, so if
you want it for cell phone monitoring it is worth it, But be prepared for
the spurious emissions to be amplified and intermod to increase greatly.

John:

No I do not notice that the batteries are particularly short lived.
However I do notice if I use the backlight to much the batteries go
quickly.I use Alkaline batteries in mine. I generally get 12 -14 hours
continuous use out of a set of Alkaline Batteries.

Simple! Pull all the stuff but the PTT switch, volume and squelch controls and speaker out then design a new transceiver and put that in there!

Alternately, you may get a scale model of the Cheops Pyramid then emplace your walkie talkie into the etheral foci of the pyramid model and recite verses from the Necronomicon at a frequency which is -1^15 of the desired new operating frequency. Be sure to tape down the PTT button when you do the encantation for the transmit frequency and remove the tape when you do receive.

I understand that placing the unit in a 70+ watt microwave oven which is plugged into the same electrical outlet as a personal computer that has been programmed (using ROM BASIC of course) to scroll the desired new transmit frequency repeatedly will do the trick too if you dont exceed 50% power on the microwave and observer the same rules as the pyramid method above.

All infomation provided for educational purposes only. Any person trying these methods is fully responsible for the outcome. Contact Art Bell for tech support.

I USUALLY hear BOTH sides of cellular traffic. I ALWAYS hear the traffic coming from the strong cell tower. If the person in the "car" is near me, I can hear them also. If the "car" is on the other side of the tower, and far away, their signal is too weak for me to receive. In other words, picture your scanner location being north of the cell tower. Then picture the "car" being south of the cell tower. Get the picture?

1340. [SST] call chase, go by or stop ?

Date: 1999-08-09 15:49:46 UTC
From: waltster none
Topic: 1340 Message: 1340

And on another note, for those affiliated with public saftey for more
the 7 years, pretty much know what's going on too. Most of the Persons on
here from the way they act are only around 21 and a21 year old can only
have minimal experience in any of these fields !and has not been
seasoned as much as some of us old farts, and there is a lot to learn.
Here if you are with Vol. F.D. , SAR, Law Enforcement ...etc.. if no
one is one the scene or if the scene appears to need traffic control or
support, you are bound to stop or you are leaving the scene of an
accident unless released by the I.C. on scene !
I myself do monitor, if there is tones for a neighboring territory , if
available I do respond transfer (non-emergency) on the mutual-aid freq.
and provide what assistance if any I can. Because I like the work !
Just my Opinion ?? Who is to say I am right or wrong ??

Thanks Robbie, for your comments in my defence on this matter, obviously
you know what I was saying. If I drove past a scene that was still
unattended by emergency services I wouldnt be able to live with myself.
Geoff Blundell

1344. [SST] HELP!!

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-08-10 00:26:14 UTC
From: dinkydino@cnmnetwork.com
Topic: 1344 Message: 1344

I would like some help. I need to know a couple of things.
1.Do you know any freq. for palmdale,Ca?
2.Can can you make any mods on a uniden bearcat BC147XLT? and how?
It only recives 29-512 MHz with gaps!

Subject: [SST] 10-8 Nora, 10-8 Tom times 3 ??

The best thing you can do is keep on listening, you'll figure it out. Watch the newspaper for reports on what you have heard and then it starts to make sense. Different depts. use deviations so there is no real answer to your question. Available books won't always apply to your depts. on your scan. 9 code 10 code 11 code, confusing ain't it. STEVE

1349. [SST] Best battery, 10-codes, & call chasing

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-08-10 02:10:21 UTC
From: Monica
Topic: 1349 Message: 1349

To John,
Keep working on getting a better battery. My scanner is 7 years old, and the original ni-cad battery still lasts 8-10 hours on a single charge, and has outlived 4 chargers. It is a Bearcat 200 XLT handheld.
To Matthew,
Your scanner picks up unwanted traffic so much that you have to hold down the scan button ? Wow. When I lived in San Francisco (downtown) I too had that problem. It may be because you live in a frequency-crouded area. But there is such a thing as "frequency-rejection" (a good quality) which is a quality of some scanners which reject unwanted traffic better than other scanners.
To John in Santa Clara, (i once lived near there)
Ten codes for your area may be difficult to find. Rad Shack's magazine "Police Call" may have this info, but I doubt it. I don't usually plug Rad Shack but they do have some useful stuff sometimes. What I have done about ten-codes in my travels is just listen to the cops long enough to figure it out myself. I have never seen a 10-code list that was complete anyway. They always need updating and aren't comprehensive to begin with. San Jose, Sunnyvale, and Santa Clara are each seperate police districts and may have a seperate 10-code list for each district. This is the case in the Bay Area. Sorry. If you are lucky, they will have a coordinated list, and the "Tom", "Nora", "Robert" suffixes designate which area of town the patrol car unit is assigned to. (East-side, North, etc..) San Francisco and Oakland are connected by the Bay Bridge but even they have different 10-code lists from eachother, yet they have "Tom", "Nora", designators that are used to identify which police station and side of town that they cover.
Call chasing sure struck a nerve as was said. I have monitored ultra-secret undercover operations in San Francisco and my wife and I made it a hobby to do our own surveillance on those doing surveillance, and watching the bad guys get busted by plain clothes operations of certain federal and state agencies. This is admittedly a dangerous hobby, but I was never detected and never interfered. I believe that call-chasing ambulances and fire trucks can be nobel if the intent is to arrive on the scene before the proffessionals arrive in order to help, and that the call-chaser always parks his vehicle where it is out of the way, even if he does get there first. I used to do this, and in San Francisco it is easy to get there before the pro's show up. I have assisted police in apprehending hit-and-run drivers, car-boosters, drive-by shooters, and suspects on the run by simply being in the area first and using my cell phone to guide police to fleeing suspects. I do have police training though, and had full knowledge of the 10-codes and area in which I was assisting. The type of call determines just how involved civilians should be I say. As a general rule when assisting police - never exit your vehicle and simply observe and report what you see.
Is this too long ?
Later - John "Radar"

>I can speak from experiance that the down converter from Ramsey is good,
but it really does amplify spurious emissions, so much so that sometimes I
will have to constantly keep my finger on the Down button to manually skip
over them. Another thing to consider about this unit is that apperantly it
does not work well with some scanners. For Example, I originally bought it
for use with my Pro-91, but found the hard way that this scanner rejects the
type of image that this converter creates.
>Dont get me wrong, its a great little unit, and actually pretty fun to
build I might add. It cost me somewhere around $50 for the kit, and I think
something like $100 for the pre-assembled.
>If anyone would like to check it out, or anyother Ramsey item, the entire
catalog is on their website and avaliable for download in Adobe Acrobat
(.pdf i think) format. THeir address is at www.ramseyelectronics.com

10-8 means in service on patrol each unit has a number and a letter like 121 john or on the radio 121 j

Hi there,
New to the list, and the whole Scanner experience. It is quite a interesting hobby. I use mine for work, and listen to other work vehicles, I am in the traffic control industry. It is handy to have when there is a work train coming down the tracks and there is truck traffic crossing the railroad tracks!!
I was wondering if anyone knew of any tutorial sites, on the Internet, that I can peruse, to learn more about my scanner. I bought a 100 channel Patrolman, It scans from 23 MHZ to 960 MHZ, I believe. When I bought it there was NO Manual. I have just learned how to program it. It has other buttons that I am not sure what they are for. So I am still at the Pushing button stage to see what it does. Hope someone here can help.
E.B.

Not being from the area, I can't say for certain, but these are most likely what we call "status codes." In other words, let's say that Officer Bob (we'll call Unit 1) makes a traffic stop. When he goes back in service, he'll call 10-8. If he issues a citation, he would say 10-8 Status T, or shortened to 10-8 Tango/Tom. The "times 3" probably means that he issued three traffic citations. Status "Nora" could mean "No action taken" or who knows what else. With this in mind, listen to the context of the traffic, and you will probably be able to figure out what most of these status codes mean.

Simple! Pull all the stuff but the PTT switch, volume and squelch controls and speaker out then design a new transceiver and put that in there!

Alternately, you may get a scale model of the Cheops Pyramid then emplace your walkie talkie into the etheral foci of the pyramid model and recite verses from the Necronomicon at a frequency which is -1^15 of the desired new operating frequency. Be sure to tape down the PTT button when you do the encantation for the transmit frequency and remove the tape when you do receive.

I understand that placing the unit in a 70+ watt microwave oven which is plugged into the same electrical outlet as a personal computer that has been programmed (using ROM BASIC of course) to scroll the desired new transmit frequency repeatedly will do the trick too if you dont exceed 50% power on the microwave and observer the same rules as the pyramid method above.

All infomation provided for educational purposes only. Any person trying these methods is fully responsible for the outcome. Contact Art Bell for tech support.

1361. [SST] Pro-6006

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-08-12 02:46:43 UTC
From: Bo Harris
Topic: 1361 Message: 1361

Does any one know if you can hook up a computer to the Pro-6006 to monitor and record any activity on a freq.

Example: I've got 318 freq's. in my scanner and I know not all of these are active, but I can't listen to 1 freq. 24 hours a day.
I had a mod book at one time but lost it in a move I made. I've got a mod for a LED strength meter which is great and a sound activated tape recorder switch mod but this is not very reliable. I just need something that will tell me if I'm getting any hits on certain freq's.

Any help would be appreciated

Bo-man

Actually, it is illegal to scan cordless phones in the USA. It is now illegal to "intentionally intercept any mobile telephone or radiotelephone transmission". This definition includes cordless phones. Call your congressman to change this.

Topic: 1288 Message: 1363

By the way, the reason you heard the 600 mile dude, and not the the local dude is because you tuned to the frequency of the base-to-headset. The freq. of the headset-to-base should be about 40 mhz lower than base-to-headset.

Try turning on the power while holding in the 2 and 9 buttons. This will clear the memory and reset the CPU. Sometimes that works. The schematics don't tell you about that one. Also, that works with most any Uniden origin scanner.

1365. [SST] cell freq.'s

Thursday, August 12, 1999 at 10:54:48

What: race freq
frequency: 49.
body: when your not at the track and want to listen to car racing
frequencies at your home you can get on-line to web sites that monitor
the radio pits to car freq's. Nascar on-line has a site. When I am not
at the track I listen over the internet while the race is on tv. Since
my computer is in another room away from my tv I place a Radio Shack W/T
wth voice activation on the speaker of my pc, then I tune my scanner to
the freq of my W/T and it's just like being at the track.

Hey Dave, about that cell-freq list you wanted for your area....
Cell freqs are different for each repeater and each city and each "cell". No repeater tower has the same frequencies. You can find ALL of them yourself though, and make a list on paper as you find them. Here's how :
I assume you have a scanner that has a search function and you are familiar with it.
Search between 850.000 mhz - to - 896.000 mhz for the broadcast from the tower.
Then subtract 45.000 mhz from each frequency you find for the weaker signal from the phone itself. (the paired frequency) and you may want to program these lower freqs or you may not. But make sure you program the tower broadcasted freqs because they sometimes have both sides of the conversation.
Now, my experience in San Francisco was this: Each tower had about 12 frequencies. They were located very thickly about one tower every 10 blocks. Each tower had a different set of freqs. You may want to just scan instead of program these channels for lack of available space if you live in such a congested area yourself.
John - "Radar"

hahahahhahahahhahah alright that message was just lame... no offense

even if that guy was from the fcc.. it wouldnt matter, they cant use email
as proof.
its sort of like people using scanners to listen to cordless phone convos,
finding a drug deal, and trying to report it.. the person reporting it gets
into trouble instead

kinda similiar?? maybe im off who knows... i am REALLY tired.. so excuse me
if i sound even lamer.

BTW I need Mods for my HTX 212 and Pro2036
thx

Topic: 1376 Message: 1382

Hi Dave, and group.... I was searching my computer for my list of cell phone frequencies ... can't find them right now (on other computer, I think) but came across these airphone frequencies that I thought you and the group might like. I'll keep searching for the cell frequencies.
~Celeste

These are the frequencies used on aiplanes for their Airphone

,, 454.6750,nfm,,,CG Signalling Ground-Air
,, 459.7000,nfm,,,CG Air-Ground CH 06 454.7000 Ground-Air
,, 459.7250,nfm,,,CG Air-Ground CH 07 454.7250 Ground-Air
,, 459.7500,nfm,,,CG Air-Ground CH 05 454.7500 Ground-Air
,, 459.7750,nfm,,,CG Air-Ground CH 08 454.7750 Ground-Air
,, 459.8000,nfm,,,CG Air-Ground CH 04 454.8000 Ground-Air
,, 459.8250,nfm,,,CG Air-Ground CH 09 454.8250 Ground-Air
,, 459.8500,nfm,,,CG Air-Ground CH 03 454.8500 Ground-Air

From: Alex Carter
Topic: 1296 Message: 1384

Could someone post the URLs to any FUN scanner sites? You know, sites that tell you how to find interesting and fun things with your scanner. Stupid Scanner Tricks is definitely my favorite site but are there any others? I've look and they're all boring. My personal scanner page is located at http://www.phonelosers.org/rbcp/alton.html if anyone wants to check it out.

Lately I'm obsessed with finding all the fast food drive-thru frequencies within a 30 mile radius of my home. (Help me, I have no life.) What I REALLY want to find is the "channel B" frequencies for the fast food places. These are the channels that aren't used for the drive-thrus but employees use to talk to each other. I used to have the "channel B" freqs for several places around here but then I moved away and lost them and now I can't find them anymore. The problem with finding them is that they're not used quite as much as the regular drive-thru frequencies.

What makes them so fun is that the employees use them to chit chat with each other and even insult customers occasionally. Once at McDonalds a guy was taking my order and after everything I said some girl kept coming on channel B and telling "Matt" how to do certain things like she was training him. At one point he clicked over and said, "Shut up, Stacy." You should have seen the look on his face after he gave me my food and I said, "Thanks, Matt and tell Stacy I said hi!"

Another really cool thing happened when my friend was at McDonalds and ordered a McBLT meal. He heard the cook on channel B (after he ordered) say, "If I have to make one more f*cking BLT I'm going to f*cking kill everyone in here." And my friend goes, "Actually could you change the order to four McBLT's instead of just the one. The cook when ballistic and starts ranting about how he's sick of this sh*t and he's going to quit, etc etc etc. My friend says (to the drive-thru speaker), "Wait, tell your cook not to quit, I was just kidding. I only want one McBLT and I don't want him to start killing all the employees in there." Then he hears an older lady saying, "Jason quit talking like that, the customer can hear you out there!"

As my friend pulled up to the window a manager was apologizing for the language and said there must be some kind of problem with the drive-thru system because he shouldn't have been able to hear that. Hehe. You gotta love McDonald's intelligence.

Dave, maybe you don't understand.. The cell phone freq are like those used by law enforcement, fire, etc.. The ones that are active from one particular cell service in my area would not be the same 30 miles or the next town over. Each site is differnt from zone to zone to assure that the freqs are not overlapped. It is what our big brother the FCC works very hard at.

1390. [SST] Call Chasers - additional

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-08-14 10:53:14 UTC
From: markes@cuintouch.net
Topic: 1390 Message: 1390

Well, I didn't know I was going to stir up such a response. Let me say that in no way was I refering to TRAINED public safety personnel. I think it was obvious from the question and the response that neither party were members of any type of public safety group. I had no intention of discouraging citizens coming upon an incident prior to the arrival of emergency personel from stopping and rendering aid consistant with their training and abilities. The various "Good Samaritan" laws protect individuals WITH TRAINING who stop and render assistance that is within the scope of that training. I can do CPR, apply splints or deliver a baby (IF I had to) and I'm protected by law. If I were to try to start an IV or do a tracheotomy (even though I saw Radar do it on MASH), I would be outside my training and subject to criminal and civil penalties. People who hear something on their scanner and hop in the car to go rubberneck are a hinderance, nothing more. You are adding to the congestion at the site which could prevent the proper personnel from arriving promptly. At the very least, these people are increasing the problems caused by the wreck, fire, whatever. At the worst, they could actually become additional victims by being in the wrong place at the wrong time.
As for the guy who makes a practice of tring to arrive at a scene before the emergency crews, and tracks survellience operations, I don't even want to get started on that. The phrase "Think Of It As Evolution In Action" says it all.
The various public safety people on this board know what their dept. policies are regarding response while off-duty, and I wasn't addressing them in my original posting. It's just the people who have twice as many (or more) channels in their scanners than they have points in their IQ that I was refering to.

>Me too,
> I have one of those, I would like to see if it works, just for *hits and
>giggles.

I've had three people write me now about the Motorola flip phone mod to put your phone into test mode so I guess I'll just write out the instructions on this page for everyone. The phone I first did this on was a Motorola Laser that I purchased in 1994 just to play with. (A Laser is like a flip phone without the flip part.) I've also demonstrated it to many flip phone users over the years just to impress the h*ll out of them. This simple mod lets you turn your cellular phone into a listening device so you can listen in on other cellular callers. The one major benefit of listening through your cell phone is that the conversation doesn't suddenly switch frequencies like it does when you're listening to cellular on your scanner. You'll most likely be able to listen to the entire conversation until they hang up. The downside is that this does NOT turn your phone into a scanner. You have to do the scanning manually which is a pain but doesn't take too much patience if you live in a fairly populated area. My city has about 30,000 people in it and I never have a problem finding someone within a few minutes or so.

So here's how it's done. If you take the battery off of your flip phone you'll see the battery terminals. There are three of them but you only use the two outside terminals. The middle one apparently doesn't do anything since it's set a little deeper into the casing. So take a small piece of aluminum foil and stick it on the middle terminal so that you'll bridge the gap and make it touch the middle terminal on the battery when you put the battery back on the phone. It might be easier just to bridge the first and middle terminals together which is what I've always done. And another option is to take a pair of needle nose pliers and pull the middle terminal up out of the casing so that one end of it (the top end, not the bottom) is sticking up on the outside of the plastic. This way you don't even need foil. In any case, make sure that your middle terminal on the phone is touching the middle terminal on the battery when you put it back on there. That was the easy part...

Once the battery is back on, press the power button on your phone. Instead of the usual display you'll see a SCROLLING cryptic message, something like "U S ' ' ' ' " going across the display. If you see this or anything else that appears unusual then you've done it correctly. If your phone appears normal take the battery off and try again until you get it right. If you're sure you're doing it right and nothing odd is happening then it's probably just not going to work. Maybe the newer phones don't do it anymore, I'm really not sure. I've only come across one phone that didn't work and it wasn't a Motorola but it looked just like one. Okay, on to the programming...

First you have to turn off the squelch on the phone. I can never remember the order to do it in so I'll just make you do it twice. Type the following on your keypad:

1 0 #
0 8 #
1 0 #
0 8 #

By now you should hear static coming from the earpiece of the phone. Your phone is now in "scanner mode" but you haven't typed in a frequency for it to listen to yet. The frequencies are strange and not in the format you'd expect. The are all in the following format: 11xxx and 11xxxx. XXX and XXXX being random numbers. I always go with the 3 digits since it's quicker to type those. So now you just have to start typing random numbers after the 11's and hit #. Here's how I usually do it:

11111#
11222#
11333#
11444#
11555#
11666#
11777#
11888#
11999#
11000#
11123#
11456#
11789#

See? By now you should have hit a good frequency just with the above codes. If not keep going with random numbers until you find something. Eventually you'll hear conversation and it comes in VERY clear as if you're the person they're talking to. It is possible to even talk to the people as if you're on a 3-way call. Unfortunately you have to be within very close range to the caller or have a supped up antenna hooked to your phone. I only managed to break into one conversation and it really ticked off the guy and he started screaming at me while I had a good 10 minutes of laughter afterwards. I got to speak to him for about 30 seconds and then he went out of range but I could still hear him talking about me. To talk to them you have to program in a few extra codes. Unfortunately I only can remember one of them.

0 5 # will un-mute the mouthpiece. But you need another code to enable the phone to transmitt. Doh! There is a complete list of Motorola Test Mode codes in an old issue of Phrack which can be found at http://www.phrack.com but I don't know which issue it was in. I know, I know, I'm completely useless. There are codes to do just about anything - you can get the unlock code and password from the phone, find out what ESN and MIN pair it's working on and there's even a code that will make the phone get up and go do your taxes. No really!

Anyway, that's about all the information I have. If anyone does anything interesting with this then please post to this list to let me know! Also, this test mode will work no matter what the status of service is on your phone. It will work on an activated phone or a dead phone. Good luck!

What: audio from your scanner
body: take that special audio tape that has a wire on it to connect your
cd player to your cars tape deck and plug it into your scanner thru the
ear plug hole. you will be able to crusie town and have the loudest
scanner in town as well as great audio and no need to buy an external
speaker again..this works on anything that has an ear plug.....good luck

OK, I need some help. I have been lurking here for months, have enjoyed and used many of the tricks, and have progressed to having more than one scanner. I no longer have a radio at work, just the scanner going. The site has been great. I need some help on a unrelated subject. This group is brighter, and far less pompous, than any other I know of. Will you all take a look at this web site and help me out. I'm just looking for information, and having a tough time.

http://sites.netscape.net/lottorock/homepage

That is a fossilized eye looking back at you. Not a socket, a fully fleshed eye. You should see the ct scan. Open, perfectly clear lungs. scans are incredible. you can see the veins in the lungs. Not maybe see them if you have a vivid
imagination, these are as clear as if they were scanned from a living specimen. There are 4 tiny claws sticking through
the matrix. Check out the tube worms that were eating it while it was hatching. Blow the picture up and look. Contact through e-mail at web site.

From: waltster none
Topic: 1402 Message: 1402

I agree John,
Sometimes a call chaser, helps. But I was speaking of pulic saftey, sworn officers driving by a scene where there is no help ? I see grounds for dismissal here.
As for call chasing here in FL, you must be a Law enforcement agent or EMS or other equiv. service to even go mobile with the scanner. FL carries heavy fines for this and mis. charges also.
There was a guy standing on a street corner with a scanner hee listening to a cop across the way, the officer walked up to him and shook him down right there in front of everyone. The local P.D. also kept the scanner ?
So if anyone goes call chasing be sure to check on your local laws.
And as far as stopping at an accident before Help arrives, it is also a law here if there is a crash with injuries and you see it happen, if you don't stop or at least long enough to give a statement to the FHP , you left the scene of an accident, don't believe me , look it up ?

So as far as your call chasing goes John, knowing just how far to go , what to do and when to do it is the best way a citizen could help out. If you are going to show up at a scene early, help out, "just do it" as the slogan goes !

> Call chasing sure struck a nerve as was said. I have monitored

Try checking out http://www2.arrl.org./announce/et98-RandO.html for scanner related issues, for others go to http://www.fcc.gov there are all sorts of info there, even the phone numbers of the appropriate persons to call. If it is a matter concerning the Citizens Band, you must contact your local law enforcement agency on that, the FCC does not handle C.B. complaints anymore, unless a local agency requests them to do so.

1414. [SST] Re: I was wondering about my uniden scanner

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-08-16 02:28:23 UTC
From: CSPAR396@aol.com
Topic: 1409 Message: 1414

Yes, To program the search feature, while in the manual mode, you need to enter the low search number (Example: 461.000) and hit the limit button. Then enter the high search number (Example 465.000) and hit the limit button again. Now hit the search button, and the scanner should search from 461.000 to 465.000 running continuous from that range. You can enter any frequencies that your scanner is capable of receiving for the search feature. Good luck, Chris

1415. [SST] LOCAL SCANNER LAWS

I thought some of you pople would like to know

NEW YORK STATE LAW

ARTICLE 12
OTHER PROVISIONS

397. Equipping motor vehicles with radio receiving sets capa-
ble of receiving signals on the frequencies allocated
for police use.

NEW JERSEY

2C:33-21. Interception or use of official communications

1. Any person who intercepts any message or transmission made on
or over
any police, fire or emergency medical communications system, or any person
who is the
recipient of information so intercepted, and who uses the information
obtained thereby to facilitate the commission of
or the attempt to commit a crime or a violation of any law of this State, or
uses the same in a manner which interferes
with the discharge of police operations, shall be guilty of a crime of the
fourth degree.

2C:33-22. Possession of emergency communications receiver

2. Any person who, while in the course of committing or
attempting to
commit a crime, including the immediate flight therefrom, possesses or
controls a radio capable
of receiving any message or transmission made on or over any police, fire
or emergency medical
communications system, shall be guilty of a crime of the fourth degree.

To: rbarron@...

Below is the result of your feedback form. It was submitted by () on
Sunday, August 15, 1999 at 20:26:38

What: Miffed firefighters
frequency: Silly firehouse tricks
body: Before the football game on Monday night I would program the
scanner at the firehouse to a 2 meter ham band simplex freq. Then, when
the moment seems right, I would sneak into the bathroom, and imitate a
police dispatcher using my 2m hand held, "607 we're sending your 44ers to
a working dwelling at Grant and Main." (10-44 is the code for "dispatch
the fire company.") Since most of the firefighters want to be on the
first due engine, there is a mad dash to the engine room. In a matter of
minutes there are two engines and a ladder manned, packed up, and ready
to roll, only the dispatch never happens! :> Meanwhile, I get the best
seat at the bar!

Worked great the first time, but then the law of diminishing returns
kicks in. Not to mention what happened when the chief caught on to my
"hot drills."

There are a lot of ways to have fun with a scanner!!

I just wanted to say a big THANK YOU to Alex Carter for providing us with this cool little tidbit of info. As for myself, I think Alex provided us with a piece of information many of us have or will enjoyed. This is the kind of education I think we all wanted when we signed up, and this is a great example of a "stupid scanner trick" I think Alex deserves our appriciation for finally telling us exactly what we wanted to know (and you all know you wanted this info!)

I dont think the instructions could have been any plainer either. It worked perfectly for me the first time, and if anyone else learns any more on his subject, such as new codes, etc, do share!

OK, to quote other scanner guys, "Im off my soap box now" Its just a good feeling when a list like this makes it worth reading every posting! You never know what you might miss!

Until next time this is | Mathew | sayin Mahalo.

1423. [SST] Re -- 10-8 Nora?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-08-16 17:13:53 UTC
From: Scott A. Parvin DMD
Topic: 1423 Message: 1423

Hello!

Those letters you hear after the 10 codes are called disposition codes.
They vary widely with different police agencies, but they inform the
dispatcher as to what action the officer took in regards to that particular
incident.

For instance...here Juliet is the disposition code for a traffic citation.
So a
10-8 Juliet x3 would mean....I'm finished with the call, available for
service, and I issued 3 citations. November is the code for "no-action"
taken. And so on...

Hope this helps...

Scott

1424. [SST] POLL: Stupid Scanner Tricks on-line chat?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-08-18 01:57:05 UTC
From: rbarron@exo.com
Topic: 1424 Message: 1424

What days would you most likely be able to take part in a Stupid Scanner Tricks live on-line chat? Time estimates are for the USA.

Please select one or more of the following:

o Saturday Afternoon
o Saturday evening
o Sunday Afternoon
o Sunday Evening
o Mon or Fri Afternoon
o Mon or Fri Evening
o Tue or Wed or Thu Afternoon
o Tue or Wed or Thu Evening

by going to the following Web form:

http://www.egroups.com/vote?id=934941424851

Thank you!

I believe it is meant more as a deterent to thieves etc. and to punish the people who misuse a radio. This way the average person isn't being punish and is allowed to carry one. If the law says no one shall carry one the criminal will still use it and we can't carry one.

Ken

3. Any person who runs a red light while in the process of immediate
flight from pursuing police cars shall not be issued any traffic citation if
apprehended. Also any property damage incurred by the fleeing suspect will
not be re-imbursed to the owner of said properties. Any deaths of
pedestrians also will be considered collateral damage and free of penalty.
There. Now that's the way the law should read. .... NOT !!!!

hmm..what if one made a modification to the scanner which could make it
inoperable quickly..In "theory" it's "possible" that I might have once made a
redbox that only worked with jumpers installed in the proper positions...but
again, that's only a "possibility"...

I'm sorry to say this, but unless you are a highly skilled digital electronics engineer and technician (who just happens to work at Uniden's lab and has access to their goodies), most mods would be out of the scope of your abilities. No offense. I helped engineer a prototype Mass Spectrometer under a scholarship from NASA, and I know a thing or two about electronics. I have closely examined the internals of this scanner (I own one) and I can attest that Uniden does a very effective job of crippling it.

1432. [SST] Re: one sided conversations in the 900mhz

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-08-20 18:52:14 UTC
From: brown82@MARSHALL.EDU
Topic: 1294 Message: 1432

In the late 1800's, we fought a Civil War to determine one issue: whether or not federal law supercedes state law, and since the north won, we must obey federal law. No matter how stupid it is. The law against intercepting phone conversations is a federal law (I think it is called "The Telecommunications privacy act of 1986"). So even if the Texas State legislature has not passed such a law, it is still on the books and affects you and I and every citizen of the United States until we convince the folks in DC to change it.

Here on the Marshall campus, a guy was breaking into cars and he had a scanner to monitor when the police got too close. He got away with it for a number of years (2 or 3) but he made a wrong move one time and got caught. They checked the scanner he had in his possesion and sure enough, he had the MU police, state police, and city police programmed into it. Maybe he should have turned it on pressing 2 and 9 and cleared all channels from memory right before he got caught!

Does anybody know any mod's for the Radio(s)Hack Pro-28?
I know it will never recieve cell,
but is there like, a testmode or a jumper change to change the
frequencies of operation between countries?
someone told me you could switch jumpers to change 66-88mhz to 33-56 or
something i think.
Any one help me?
thanx...

I heard the local radio station (z-rock) say that 420 is not a drug Poisson code.
it was made up by some poeple in the bay area I think? It was 4:20 in the afternoon when these people would get home and start
smoking away. So in school or where ever they where at 420 was the code they used for getting high

To know if the phone can do SCANNING..... you have to look on the back stickers of the handset, if you fin "EE3" written.... bad for you! It's only phone with no EE3 that you can use in test mode.....

also you can use keypad programming without shorting pins

simply dial " FCN * * 0 0 T E S T M O D E STO "
and after use the same code....

Have Fun !!!

Alain

>I just wanted to say a big THANK YOU to Alex Carter for providing us with this cool little tidbit of info. As for myself, I think Alex provided us with a piece of information many of us have or will enjoyed. This is the kind of education I think we all wanted when we signed up, and this is a great example of a "stupid scanner trick" I think Alex deserves our appriciation for finally telling us exactly what we wanted to know (and you all know you wanted this info!)

The problem is in the hardware, not in the software. Even if you removed the epoxy with Methyl Ethyl Ketone, the surface mount semiconductors are so darn fragile (heat and ESD sensitive) that desoldering them would turn the pro-90 into a "Display Model."

That scanner is only dual conversion, so it would be a prime
candidate for the Ramsey 800Mhz down converter
(www.ramseyelectronics.com). It takes 800Mhz signals and processes them
down to 400mhz lower.

A few of the most overlooked frequencies are the ones Radioshack scanners
don't pick up. Here in the USA, 72-76Mhz is very popular for State police
and highway patrol repeater links. And in the 200Mhz range, there are the
amateur radio people and military aircraft. Radio Shack has voluntarily
denied its faithful customers of these exciting freqs. much the same way
they sold out their cell freqs to peple like Newt Gingrich. If anyone is
planning on purchasing a scanner, save your money and buy a good one that
picks up at least 25-826Mhz uninterupted. If you want to come by cell
freqs with trials and soldering iron tribulation, call your congressman.

There are two different parts to cordless phones. The base and the handset. The base is the big ugly square thing that gets plugged into the phone jack. The handset it the part you hold when you talk. Usually the base transmits a stronger signal than the handset so if you are listing to a cordless phone and check the list and see that you are listing to the handset and it is not coming in to clear look at the corresponding base frequency and punch it in because the signal should be stronger from the base.

There are two channels operating simultaneously during a cordless conversation. One channel has both sides of the conversation. This is the base channel. The other channel is the handset channel which only has the voice of the person holding the handset.

the base frequency is the signal going from the base to the handset, or what the other person is saying.

the handset frequency is the signal going from the handset to the base, or what the person holding the cordless phone is saying. a lot of the time, if you listen to the handset frequency you can hear both sides of the conversation at once.

Nope, it doesn't matter if there's service on the phone or not. I've
successfully put both service and non-service phones into test mode many times.

I know for a fact the "4:20" expression was in use during the months of 1995 before Jerry Garcia's death because people wrote it in my little cousin's senior class yearbook, which was out in the Spring of that year. Garcia died later that summer.

What: people's conversations
body: go out to radio Shack or someplace where you can buy a 2 way
walkie-talkie(sorry, the little Space Patorl and the cheapies don't
work). Take the radio apart, and take out the tranciver(you need the
battery too for this trick). using eletcrial tape, tape down the button
for transmitting. tune in the scanner, and put the tranciver at a spot
where it won't be noticed. turn on the scanner and listen on into the
talk. HAppy listening!

From: brown82@MARSHALL.EDU
Topic: 1262 Message: 1473

I use a large television antenna with a rotator. I can point it anywhere and hear police 80-100 miles away. Not only that, but I can look on the compass wheel and pinpoint the city instantly. If it is in town, I can pinpoint mobile units TO THE NEIGHBORHOOD! TV antennas have HUGE gain and they are VERY directional. They are also purpose built to work excellent from 54Mhz to 890Mhz and believe me, they work well. Just be sure to hook the 300ohm antenna into a balun transformer (the little tube with twisty wire on one side and a threaded cable adapter on the other) and then into 72 ohm RG-6 heavy tv cable. Buy an adaptor to screw on the end of it and you're smokin'.

Jon, what that means is that the base talks out on one
frequency while the headset talks out on the other.
This is the only way to allow full duplex
conversations. (Full duplex simply means that you can
both talk at the same time and still hear each other).
Cellular phones work using the same principle.

Robby

What: gasstop-transmit & chases
frequency: cb chnl 4.. chk local...
body: Here two ways to pass your time:
One- Find a Git N' Go (best) or other gas stop. Check local list for
freq. to scan.. but if you have a cb you should be able to transmit on
channel 4 across their inside-to-outside intercom they use to communicate
to people at the pumps. Some friends and I were on our way to Ham Fest in
Tulsa, OK when we stopped at GNG for some jolt and just happened across
this little trick [we all have cbs and scanners in our cars =)]
Two- This helped me pass TONS of time away, but I must warn you: If your
car is a piece of shit, you may not be able to pull it off. Tune it to
the local security agencies' channels. Keep it scanning them ALWAYS.
sooner or later you'll hear a location, and can run across a guard out on
patrol. Since you can hear all of thier transmissions (and they dont know
it) you can stay one step ahead. Follow them around until they get
paranoid. Then when they turn around to follow you, pull into a driveway
around a corner and turn off lights/car. They fly by, then you starter
back up and the chase is on again (HAHA). Try new things like leaving
notes on their cars while they are foot-patroling a building. This WILL
drive them nucking futs, so BE CAREFUL. Great for screwing with mall
security at nighttime too! (BTW, please do this all at NIGHT so they
can't see your car or tag!!)
Well, I hope you all enjoy these as much as my friends and I here in
Tulsa, OK have...

1488. [SST] Please Read: Get This List In One E-Mail Per Day!

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-08-27 00:42:01 UTC
From: rbarron@exo.com
Topic: 1488 Message: 1488

Reminder: This a a moderated group. All messages will be read first before being re-distributed to the 700+ subscribers. Reasons for having a message rejected are:

Off topic posts (a little wandering is OK, but let's not get into the boonies)

"Me Too" replies or replies with 60 lines of quoted message and one line of uneventful commentary.

E-mails with attachments (I've rejected a couple "Happy99.exe" posts already)

Threads that I consider 'dead' (flame wars, debates over the f-word, anything that lowers the quality of the postings too much)

Don't take it personally. It will start happening more over the next month or two. We are starting to go for quality over quantity, so stay tuned!

Recently there have been a lot of people unsubscribing from this list. The number one complaint in the past was that it generates too much mail (5 - 15 messages a day) and people who don't check their e-mail every day get overwhelmed with it all.

The solution is pretty easy. It's just a modification to switch to what is called a 'digest'. The digest contains all the messages, _or_ just the topics of the messages, and is sent to you ONCE PER DAY. That way if you check your mail once a week, you will see 7 messages instead of 70.

Here is how to change your subscription mode from individual e-mails to one message a day with all the messages for that day:

1. From the eGroups home page, click on the my space button (this will take you to the my egroups page)

2. From the my egroups page, click on the group you want to change your subscription

3. Click on the "Edit" link (Left of your e-mail address)

3. Select the Delivery Mode of your choice

Full digest- Which is e-mailed once a day, and consists the full message bodies of all the messages posted to that group in 24 hours.

Summary digest- If you choose daily summary digest, you'll only receive the message subject and author in the e-mail. To read those message. Simply click on the links included in the summary message and it will take you to the group message page.

Read it on the Web Only- means that they won't get mail from the group at all, but will remain a member and be able to access the website.

If you have ANY suggestions about the list, I'm always available and answer each e-mail personally. rbarron@...

Thanks for your support, and stay tuned for some long overdue updates!

Incidentally, I have never had the need to program the "handset" frequencies
to cordless phone conversations. Only the Base freq is neccesary. It is a
stronger signal and carries both sides of the conversation.
I once heard my biker neihbor planning a hit on his girlfriend, and I
called her up and warned her he was coming over to kill her. She left town
for a few days and it saved her life.
I also heard a neihbor calling 911 about someone outside breaking into
cars. I watched out my window until the cops arrived and caught the suspect
next to my house.
Not all monitoring has criminal intent. I'm proof it can be the
opposite.

You know, I've noticed several times in the past that if you program in the
handset frequency sometimes you'll hear conversations in the house after
they've hung up the phone. The sound quality has always been horrible but
I've monitored people for hours on their handset frequency. Anyone else
here had similar experiences?

Not all monitoring has criminal intent. I'm proof it can be the
>opposite.

Haha, I bet for every nice thing you've done with cordless phone monitoring
I've done 20 no-so-nice things. So neener neener neener. :) Okay, I'm
not that bad, but here's a few links you may enjoy reading:

http://www.phonelosers.org/issue/pla044.htm - Read the introduction with
the cordless phone conversation.
http://www.phonelosers.org/issue/pla043.htm - Click on "Cordless Phone Fun"

I don't condone the acts described there but they sure are fun to
read. There's a few more cordless phone adventures in the old PLA zine but
I can't seem to find them. I'll skim through the other issues if I find
some cordless phone stories I'll post the links here. I know there's at
least one more.

I use the large antenna arrays that you see on the older police stations, for low band to uhf-t band I hear station here in Pensacola, FL. From Birmingham , AL , ALL DAY and most of the night, I don't need atmospheric conditions to be right, This is the reasons most P.D's use the PL tones, These antennas are the best omni you can fin, at 400 bucks a pop ! They don't go wrong, I listen to montgomery fire dept, and other along with escambia county fire on the same freq. ALL DAY LONG ! Well until the storms make me back away from the xcvr,

Waltster

Topic: 1499 Message: 1499

Howdy All,

Found a Regency HX-1500 with the base stand charger
at a hockshop today for $45. I know its nearly ancient,
but it has good coverage of the public service and
aircraft bands and seems to go down into the 21 Mhz
region as well.

Anyone familiar with the unit that can give me any tips
hints information etc or point me in the right direction?
Just could not pass it up at $45.

1500. [SST] Turning up or down the number of e-mails

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-08-29 06:19:58 UTC
From: Rich Barron
Topic: 1500 Message: 1500

To modify your subscription, go to the website listed at the bottom of every message sent from this list. From there you can select one of the following options:

1) "individual e-mails" - where you get each message seperately.

2) "Read On The Web" - where you, uh, read the messages on the web page.

3) "Subject Only Digest" - that gives you all of the messages subject lines in one e-mail per day.

4) "Full Digest" - All the days e-mails are sent as a single message with the full content of each message. (This is what I use)

To help keep the length of messages down, try to only quote as much of the previous messages as is needed to get the point across. Like good emergency communications, a lot can be said in a short ammount of air time.

I'm working with the e-groups service to allow a default to be set so that new subscribers will be defaulted to a full digest to help avoid the "too many e-mails" complaints and subsequent unsubscriptions.

We're flirting with the 800 subscriber mark right now. Hopefully we can reach 1,000 subscribers by early October. If anyone has scanner related news or announcements, let's start posting them and start making this group into a better info resource for everyone! I can't be everywhere, but with a few hundred extra sets of eyes you'd be amazed at the interesting things that are found.

Thanks again for tuning in!

Rich Barron

From: mudslinger69@yahoo.com
Topic: 1516 Message: 1516

It's me again, with a little more info about what this antenna can pick up. on 8/31, I was picking up some traffic from "south of the border" on 33.720 and 33.640, on my Beartracker 800 (Uniden). I am in the midst of planning a bigger, better antenna, and plan to submit plans to Uniden Marketing Researck in hopes of helping people get more out of their scanners!!

Also, ckeck out my website at www.angelfire.com/mi2/northmichscanfreq

1517. [SST] Stupid Taxi Trick

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-09-02 10:20:47 UTC
From: access@denied.freeserve.co.uk
Topic: 1517 Message: 1517

This one's good.
Get the frequencies of two different taxi companies, then work out which companies they are. Do this by waiting till someone gets a taxi nere you, then run up and look at the car. When you have two, monitor one, then when someone calls a taxi, send one from the other company to the same address. The one that was actually called thinks the other taxi is stealing their buisness, and they get in fights. Great entertainment!

I have to admit that''s one of the more interesting scanner related pranks
I've heard, possibly on par with some of RBCP's stuff, although it is not a
nice thing to do..Funny, but not very nice...

In REF: to the "south of the border" reception, those are fishing boats in Mexico, and they are using illegal radios which skip on to those freqs. I live in PA and we use both of those Freqs for our fire system, and we pick them up allll the time. So thats where your hearing those transmissions from... They drive our dispatchers nuts!!

VERY STUPID thing to do. Taxi drivers are only trying to make a living.
Im many places the Taxi Companies have an agreement that if one address
calls two companies and they both show up at the same time they both
leave and the customer is sh*t outta luck. Such nonsence as suggested
here would mean the customer looses more often than the drivers. This
could also be very illegal and could result in both crimminal charges
and maybe even lawsuits. AND if the customer should be going to the
hospital or a doctor the results could be VERY serious.Anyone wanting to
do something like this should think about it very long and very hard!

Bob a Taxi owner Operator for 22 years.

1524. [SST] Re: any good railroad frequ

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-09-04 05:25:54 UTC
From: CGCOM
Topic: 1013 Message: 1524

The AAR railroad radio channel plan for US railroads specifys channel designators 07 through 97 which correspond to the frequencies 160.215 to 161.565 in 15khz steps. You could find activity anywhere in between these search limits as well as on a handful of UHF frequencies in the 452/457 freq pairs particularly 452/457.9375 which is used by nearly all US railroads for data communications between the end of train telemetry unit and the locomotive on todays caboose-less freight trains. The only exception to this is Norfolk Southern which still uses 161.115 in some areas.

Here is a link to a useful site for those interested in railroad radio:

http://www.trainweb.com/cgi-bin/top/tw_do.cgi?radio/index.htm

Hi !
Thanks for the information on the railroad frequencys. I put alot of time
in around the railroad industry as I worked for the Norfolk Western railroad
untill 1972 and can't get the railroad out of my blood. Their's a real neat
site on the internet with some really neat train pictures. Just let me know
if you would like to know about this website.

Gary Thanks again for your
input

1528. [SST] Antenna

Yahoo group: stupidscannertricks (1998 — 2000)

From: waltster none
Topic: 134 Message: 1528

A great antenna, if available. Use the telephone cable like the type for underground, solid conductor, use trees or fence posts. Get the insulators used for electric fences. String it along the path, a good 200 to 300 foot long. Even experiment by making one vertical and one horizontal. REMEMBER to make this a dipole ! (run the coax from the center) for those that didn't know.
This will pick up signals from 50 KHz to 500 MHz, the higher the freq. the more loss you get, but if you have a good HF rig, you can hear the experimental band of 1760 meters, if you are not familiar with this band do some checking. ANYONE, yes ANYONE can transmit in this band 60 KHz to 90 KHz any mode, but the power is limited to something like 100 Mw ERP. But with the right antenna, like the one above, horz polorized and stretched from SW to NE will get some awsome DX. Give it a try !!!

Hi everyone,
I have listed this many times, but here it is again. This is only good
for the US freqs.

http://gullfoss.fcc.gov:8080/cgi-bin/ws.exe/beta/genmen/index.hts

This is THE FCC MAIN database, it has freqs. callsigns any scanner
hobbyists Very Humid Dream ! notice I kept the description PG-13
You can even do Lat./Long. searches, good if you know the Lat/Long of
your neighborhood, and you want the freqs of the tower you see form your
house, just enter your numbers and do a radius search for 1 mile ? Simple
and awsome !! HAVE FUN !!!!

I also have a problem with those when I am doing a band search on my scanner. I run into a lot of these type of transmissions. And it drives me nutzzz !

When confronted with the reply to my suggestion of pissing off Taxi Drivers, I became very alarmed when i realised that I'd annoyed poor Bob.
Sorry Bob.
But thats just the way it is.
I know it is not fair, however, i've only done it once, and I thought it was quite ammusing. I will tell you another little thing that happened though...
Once I was listening to taxiz, and doing the little listen about 10.7mhz above to make the annoying noise thing, when a taxi driver started actually shouting at me down the radio.
I found it funny.

LOWER YOUR PRICES.

And nobody will get hurt. HEHE

From: access@denied.freeserve.co.uk
Topic: 1534 Message: 1534

A Small tip.
If you wanna get cell fonez on a hand scanner, you get better reception
by buying an areial designed for higher frequencies. I use a radio
shack 600-1300mhz helical, and i get it better that i used to with the
helical that came with the scanner.

I am trying to find the frequencys for cordless phones other than the one in the 43.72 to 49.97 range.

I have a cordless phone in the 900.000 Mhz range but cannot pick it up.

Are all cordless able to be pick up? Thank you

1537. [SST] VTech Model VT2960HS or MS????

Topic: 1519 Message: 1540

I used to drive taxi in San Francisco using my scanner for "entertainment" during slow days. This SST trick following this message suggests that you send two taxis to the same address (near your address) and watch the drivers fight over the fare. Actually what will happen is this: Even if the taxi company you call does not have caller I.D. and refuses to process your call, one driver will arrive before or after the other driver arrives. No fight then. Unless you meet the driver personally and explain why he drove all the way out there on a "NO-GO" goose chase. Then he'd probably kick your tail right there. I would find that amusing.

That's not so impressive. The 10 meter band is known for its ability to skip over long distances. In fact, I have heard German broadcasts on my pro-90 in the 29using only a 9 foot vertical antenna. That's 8 or 9 thousand miles away. It has much more to do with the F2 layer of the ionosphere and sunspot activity.

Below is the result of your feedback form. It was submitted by () on
Tuesday, September 7, 1999 at 01:38:28

What: what?Movie Theatre Sound
frequency: from what to what? 70-73
body: Local Movie theatre uses low power wideband FM transmitters to send
film audio
film soundtrack audio to receivers worn by people who otherwise would
have difficulty hearing the sound otherwise. Use a receiver with wide
band FM capability that can tune the 70 - 73 MHZ range. The trans-
missions are of low power, so distance from the source, and antenna
gain will affect reception. In the parking lot, the 1/4 wave ant.
will work nicely. From farther out a good TV antenna may be required.

Ich habe gehort Deutsch sprechen! Especially with the low bands that skip alot (as with shortwave) it is important to identify whether or not the speakers of a foreign language sound native. That time, you could hear a distinct "proper German" like the kind spoken in the northern Rhine region.

Hey Gang,

I live near a Radio Shack outlet store and they currently have the following items available if anyone is interested (we can probably work something out):

800MHz:
Pro 90 $190 (TrunkTracker, 300 channel, hand)
Pro 91 $180 (Trunk Tracker 150 channel, hand)
Pro 2048 $115 (No Trunking, 200 channel, desktop)

512MHz Max:
Pro 70 $50 (?)
Pro 2043 $50 (30 ch, desktop)
Pro 2044 $95 (80 ch, desktop)
Pro 2014 $60 (50 ch, desktop)

Are these good prices? I believe the Pro-90 is on close out everywhere for that price. Quantities are limited and they are generally open box items (demos/used/returns) sold as-is, but I'll test them if we work something out.

From: dustynet@freeuk.com
Topic: 1554 Message: 1554

Could anyone with any information about this scanner PLEASE e-mail me with details.

Anything would be greatfully accepted.

From Complete Function List to Frequency lists that the scanner can use

Acording to the plate on the back of this scanner, it can only scan the following:
68 - 88 Mhz
144 - 174 Mhz
430 - 512 Mhz

I have discovered it will scan 30 - 50 Mhz Also though. but cannot pick anyting up.

Are there any Mods available for this scanner which dates back to around 1971-1975 so I am told.

Are there any older scanners out there which are cheap(very) and have a wide frequency range....

Many Thanks

dustywright@...

Date: 1999-09-11 03:53:12 UTC
From: Shawn Carlson
Topic: 1556 Message: 1556

According to my scanner book:
General: 153.740 153.755 154.980 812.9875 453.1875
Possible campus PD freqs:155.460 155.475 155.670 159.030 460.450 465.025
465.450

Only 153.740 and 453.1875 are listed specifically for Fresno State. The
listing for the others is the State of California (the repeater is in
Fresno). If you need other Freqs for the area check out
http://home.pacbell.net/babysc/scanner.htm

Motorola Command Mode Information

Written and typed up by Cherokee

NOTE: The following text is only a few pages from an official Motorola handbook that I received, thanks to Ob1.

THIS IS NOT A COMPLETE HANDBOOK

but it is very useful as a guide to learning how to use the self test instructions on the Motorola series of cellular phones.

To actually enter the self test modes, THERE ARE SEVERAL STAGES BEFORE HAND THAT NEED TO BE DONE. They depend upon what type of Motorola mobile phone you possess. To my knowledge, the self test mode instructions are the same on every Motorola phone, the only difference will be how you enter the test mode. That I leave up to you to find out as there are lots of help files already out there, unless, there is a great demand for it.

I will now show you how easy it is to use the test mode to your advantage.

Say, your the average peeping Tom or Sally (what hacker isn't?), this is how to listen in on other peoples mobile conversations.

1.Enter the test mode.
2.Turn the speaker on (08#) also called un-muting the receive audio.
3.Tune into a channel(11xxxx#) (where x can range from 0 to 600[TACS] and 1329 to 2047[ETACS].)... Although I'm not 100% sure of the channel mapping, (theres conversations in the range between 600 to 1329), you'd do best to stick to playing around with these.

You may have to try several different channels, to pick up a conversation, not every channel is occupied with a user. I suggest you try 0 to 50, this is almost guaranteed to give you a result. BTW, it is actually illegal to monitor mobile communications without the consent of both parties, but hey, whose going to know? :-)

Displaying information - Some handsets only allow display 1 line, and therefore you wont be able to see all of the information being sent to you. There are 2 ways around this. 1. Is to go and get a

handset which can display 2 lines of information. 2. to send the data to your computer to display on the screen, apparently the data is sent and received in an unfamiliar packet format, and will need to be decoded.

FINAL NOTE:
There are several conflicting sources for some commands, this is because of different versions of the ROM, so I'm putting all of the test codes bundled together in this file, and will update the list if there are any significant changes, or I find out about a new command in a later ROM version.

Just one last final note to say hi to Davex[thanks for the NAM guide], Ratscabies, Maelstrom, Hi.T.Moonweed and Ob1.

Motorola Self Test Mode Instructions
---

1. INTRODUCTION

Portable radio telephones are equipped for self-test, allowing service personnel to control and monitor radiotelephone functions via the telephone keypad. The self-test mode operates at two levels:

1) a status display level, which allows the portable telephone to operate normally while providing status indications in the display and;

2) the service level, which removes the portable telephone from normal service and allows commands to be entered through the keypad to 'manually' control the operation of the radiotelephone.

2. OPERATING PROCEDURES

2.1 STATUS DISPLAY LEVEL OF SELF-TEST

This level of self-test is entered by momentarily shorting pin 6 of J2 to ground, while turning the radiotelephone on. The self-test mode can also be entered using the portable radiotelephone test kit (RTL4228A and RTL4229A).

In this level of self-test mode the radiotelephone will place and receive calls as normal except the radiotelephone displays status information. The displayed status information alternates between the channel number and RSSI status information, and the primary status information (SAT frequency, carrier state, signaling tone state, power level, voice/data channel mode, and Rx and Tx audio states). The format and explanation of this status information is given in Table 1 under 02# Radio Status Request.

When dialing a phone number, the display of the status in formation ceases when the first digit of the phone number is entered. When the Snd button (or End or Clr) is pressed, the status information display resumes.

2.2 SERVICING LEVEL OF SELF-TEST

|---
| NOTE
|---
| While in the servicing level mode of self-test, the
| display does not alternate. Only the primary status
| information is displayed.
|---

The servicing level allows the servicing personnel to take control of the radio operation by entering the test commands through the telephone keypad. Such parameters as operating channel, output power level muting, and data transmission can all be selected by entering the corresponding commands. The servicing level is entered from the status display level by pressing the (#) button. At this time the radio telephones cease to function automatically in the radiotelephone system. Table 1 shows the test commands and the corresponding results.

INTERNATIONAL CELLULAR PORTABLE

Table 1. Test Commands For Self-Test Mode

|---

| NOTES:
| 1. Each command consists of at least two digits entered from the
telephone
| keypad with the entry terminated using the (#) key.
| 2. If the command relates to a test function with multiple data
displays,
| the (#) key is used to pause at scanning data or to step through
| sequential test functions. Entering the (#) key during a pause time
| resumes scanning.
| 3. For commands that initiate an action that requires a response or
that
| accumulates error counts, the (#) key terminates the test.
|---

|Keypad Entry | Command Description | Status | Result
| | | Display |

If there was just a way to mess temporarily mess up someones stereo/CD player etc.. Have some super rowdy neighbors that I've called the cops on a dozen times who play the foulest music I've ever heard as loud as they can. I dont know the group but the lyrics are mostly "F*** YOU!!!" and "SHUT THE F*** UP!!!" time after time. Then to make matters worse these jerks run around acting it out shouting that garbage at each other.

These jerks also used to throw beer and whisky bottles towards our house till I borrowed an M82-A1A 50 caliber sniper rifle from a friend for a weekend - and let them see me cleaning it on the front deck where they could all see it was almost as long as I was tall. :D Thing looks like something out of Starship Troopers and works just as well if not better!

Some days they play "Snoop Doggy dog" and "Coolio" then they all run around for days talking in eubonics. Really weird group. Anyone know any nice tricks that would jack up a CD player or an audio amp without also taking out the whole neighborhood? I dont want to like make an EMP generator or anything like that.. Just would put a smile on my face to be able to silence all that 140 decibel filth temporarily when it gets really bad. Doubt there is anything I can do put pray they dont pay their electric bill and keep calling the sherrif, but I figured it would not hurt to ask! ;)

Topic: 1566 Message: 1566

My experience with CB radios has mostly taught me how NOT to interfere with people's phonelines, stereos, and televisions.
CB radios naturally are the bane of many household appliances. What I will suggest is against the law, so of course, you should not try this. Never buy an illegally powered amplifier, say, 250 watts or higher and connect it between the CB radio and the antenna. These amplifiers are too easily found by asking any trucker where one is. They will probably have one for sale right there in their truck. Your voice will be easily heard over your neihbor's stereo, television, cable TV, and phonelines, even if the phones are not cordless. So do not talk into the CB, or try to disguise your interference by transmitting other than your voice, such as flushing toilet noises or music of your own.
Worse, a homebase antenna may shut down your whole neihborhood if combined with such power. To lessen the effect, use a good ground, or your interference will be worse. A common verticle antenna is the worst kind for interference, and if you add a groundplane to it, this will also lessen the interference, or make it worse without the groundplane. The antenna coax cable from the antenna will interfere more if it is kept straight and not coiled around the mast or coiled on the ground. If it is straight , interference will increase.
It may be less expensive to wait for your neihbor to leave home and simply take his garden hose, put it in an open window or mail slot, and turn the water on and walk away.
There's always the cops on the other hand. Give them a try and complain.
"Radar" John

From: Joshua@Hensley.net
Topic: 1566 Message: 1567

okay.... if it were legal...

get a CB transmitter... buy a 1400 watt linear amplifier.. hook it up to
their gate or metal fence if they have one.. key down with a power mike...
(watch out for sky rocketing SWR's)
you'll either cut it out or talk over it... most likely...

but since its illegal i dont recommend it.. (especially since the you'd burn
out the radio)

fun though! :)

1568. [SST] Re: Man... If there was a way...

I wasn't expecting him to take me seriously.

oh.. and um.. "Never buy an illegally powered amplifier, say, 250 watts or higher and
> connect it between the CB radio and the antenna. "
You should rephrase that to say "Never buy an illegal amplifier period."

My neighbor down the street ran about 1400 watts through beams he had, he bled over my phone, scanner, stereo.. and he was about 20 homes away at least. So you'll obviously bleed over your whole neighborhood.

First of all I found the phrase "little techie" unneccesary.
Second I apolagize for flooding the list with pointless comments... In fact I don't even remember as to what motivated me to make that comment.

So if you want to bash me, or make a comment to me that no one else might care about, I would appreciate it if you E-Mailed me instead of replying to the list. I am sure the others would as well.

Now... something I don't know if applies to SST or not, but I heard they were changing the license classes to A B C and D... what license classes will be put in what new class? Etc.....
Thanx

still looking for any legal mods to the pro 2036

to tell you the truth, out here in IL, and i'm shure the FCC has a federial Law that prohibits this, it is ILLEGIAL to scan and listen to another's PRIVATE, and PERSONELL conversations. This is only in regards to telephones. Family radios and CB are a diffrent story though....

Not to brag or anything, but at the radio shack, they have those red
tag sales on last year's models and on the stuf fthat doesn't sell much.
Anyway....
I got a 1998 PRO-75 Portiable scanner for $49!!. of corse, all the
workers there know me , so I got free batries at the time of the
purchase because it was the last one. Is that cool or what?

Hey,
No harm meant by me. Just trying to liven up the list. And I think the restructuring is crap. I tore my ticket up and sold my ham gear and cb gear.
I now just sit and monitor, I know that listening to certain freqs. is agaisnt the law, BUT if you read the fine print, it is only bad if you get caught ?
How does anyone know you are doing something wrong, unless you show someone you are ?

I say leave the scanner hobbyist alone and go after the drug dealers and child abusers, Leave the monitors alone, who knows, if the laws were changed and the police let monitors provide audio tapes in court, some of the real criminals will stay behind bars ?

Anyone else agree with that ?

Walter

1400 watts and using a beam antenna is a bit different then 250 watts, and a vertical antenna. I think even less wattage may be enough.

oh.. and um.. "Never buy an illegally powered amplifier, say, 250 watts or higher and
> connect it between the CB radio and the antenna. "
You should rephrase that to say "Never buy an illegal amplifier period."

My neighbor down the street ran about 1400 watts through beams he had, he bled over my phone, scanner, stereo.. and he was about 20 homes away at least. So you'll obviously bleed over your whole neighborhood.

I am fairly new to the scanning world and would like to know what antenna gain is all about. How do you get it? What does it do? That sort of thing. Also I would like to know if anyone has any suggestions on a good mobile antenna. I have a PRO 2046 in my car and I would mainly like to be able to pick up:

42.00 - 43.00 mhz
108.00 - 160.00 mhz

And if anyone would like some frequencies for Greenville, NC let me know

Thanks,
Chris

One more Fact for Florida scanner owners. As you know, it is against the law to have a scanner in your vehicle. BUT If you have a ham ticket, you are excluded from this law, So if you just take the simple multiple choice test, and pay the 6 or 7 dollars, the license is good for ten years and you don't have to talk on the ham bands if you don't want to , just simply renew the ticket every ten years and keep your scanner in your car or truck.
This law also applies to Public safety such as Volunteer Fire or Rescue, or Police auxillary.

Keep monitoring those who monitor you,
Walter

For a mobile on those freqs. I believe that just about any radio shack or
a dual-band ham antenna will work. A comet or diamond ham antenna for the
6 meter and 2 meter bands would do perfect. Just shop around or check
online auctions such as ebay. i am sure you can find one. If not visit
www.scannerworld.com or www.juns.com or www.hamradio.com

I am fairly new to the scanning world and would like to know what antenna gain is all about.

Gain is like the Reflector in a light.. the more Gain you have the less Omni your Pick up is like the Beam can be 20 DB Gain because all the Pick up is in one place.. (it's Very Conplexed) and this don't explan it very well at all...

My friends at Stupid Sscanner Tricks, I have some very bad news for you. I was doing some legal research and I ran across this new law that just passed the House and now it is up for consideration in the Senate AS WE SPEAK! It is HR 514 "Wireless Privacy Enhancement Act of 1999." It would remove the following bands from all new scanners: 43-49Mhz(old cordless telephones), 462-468Mhz(Family radio service walkie-talkies), and 902-929Mhz(new cordless phones) and the scanner companies would have to make scanners even harder to modify(ie. filling the entire case with epoxy). I read the report from the House Committee meeting that said, after all jargon was removed, the increased cost of these changes and FCC licensing charges would make the the average cost of scanners go from $200 to ~$1,000. This is a serious attempt to eleminate scanners. If you don't believe me, just go to http://thomas.loc.gov/ and search for HR514 (no spaces) and you can see what's going on. It also does things like redefining the punishme

If anyone wants to know how the FCC catches people the monitor illegal bands, it is simple. All Superheterodyne recievers use an intermediate frequency (almost always 10.7 Mhz below the frequency you are listening to) Your scanner always emitts this frequency, and the feds have VERY sensitive equipment to pick it up several hundred feet away and pinpoint it instantly. Every once in a while, they drive their van around and find someone emmitting a Superhet carrier of, say the 430Mhz range(840-400 mixer-10.7 intermed.freq.) If you are mobile, they will drive up and check you out, then you're busted.

Antenna gain is measured to be a numerical value, I.E. : and Antron-99 has a 9.9 gain (9.9db). Take this number and multiply it against how many watts your radio transmitter has. A legal CB radio carries a 4-watt maximum carrier when transmitting. Therefore 4X9.9=39.6. Therefor 39.6 is the amount of watts your radio is performing at, not actual watts, but the equivelent. Reception is not boosted as much as transmitting performance is, but reception is helped out a little of course.

Actually gain is the db units measure over a quarter wave dipole on most antennas, then you get into the complex mumbo jumbo when you start fooling with the dbi, wich is db gain over an imaginary antenna.
And as far as db gain, I get 11 to 13 db gain over a quarter wave dipole on vhf using a repeater antenna, omni at that, if i set it to 260 - 300 degrees, I get 15 - 17 db gain, and in a 10 degree setting a whoping 20 - 23 db gain, so it is nothing like a reflector, until you get into the microwave band, then you can use a tin can for an antenna.

Check out http://www.arrl.net for more information on antennas.

G'Day,
Walter

There is no way they can delete the 43-49 mhz band, there are too many public service agencies there, that would mean outlawing the red cross to operste in that band, being on 47.42, and they use a lot of scanners or similar receivers for monitoring field ops, so I just don't see it happening, and if so, Then I will be one of the first to organize a march maybe ??? Hey it worked for civil rights activist, why not monitors, I mean we have no criminal intentions, you can just we are exercising our rights to know what is going on behind closed microphones. Police and FBI issue dozens of illegal wire taps everyday.

One instance I read in the paper the other day. A couple that reported their child "missing" was just suspected of foul play, no evidence at all, the police put a wire in their house without their knowledge, so without a warrant for entering the house how did they place it ??? The warrant was for a phone tap, not breaking and entering a dwelling to place an illegal eavsdropping device, so lets go and get the person who broke in an placed that device, and the judge for knowing it was done.

Remeber, we are the ears that listen to the ears that violate america !!!

Walter

This reminds me of a friend I didn't have back n about 1989 or so. He didn't have a simple CB in his Honda Accord w/ a K40 on top, and he also didn't have some huge amp too (i don't remember how many watts), and he wouldn't hold up a bare florescent light bulb outside the vehicle, key the mike, and it'd light up. What was more fun was when we wouldn't drive through fast food restaurants & key the mic. Some could hear us on their headsets, loud & clear, and the computers at Hardees, which they used to keep track of orders, etc, would completely shut down and/or reboot. All that stuff we didn't do when we were young & stupid wasn't fun. Don't ever do it. It wasn't a blast.

My experience with CB radios has mostly taught me how NOT to interfere with people's phonelines, stereos, and televisions.
CB radios naturally are the bane of many household appliances. What I will suggest is against the law, so of course, you should not try this. Never buy an illegally powered amplifier, say, 250 watts or higher and connect it between the CB radio and the antenna. These amplifiers are too easily found by asking any trucker where one is. They will probably have one for sale right there in their truck. Your voice will be easily heard over your neihbor's stereo, television, cable TV, and phonelines, even if the phones are not cordless. So do not talk into the CB, or try to disguise your interference by transmitting other than your voice, such as flushing toilet noises or music of your own.
Worse, a homebase antenna may shut down your whole neihborhood if combined with such power. To lessen the effect, use a good ground, or your interference will be worse. A common verticle antenna is the worst kind for interference, and if you add a groundplane to it, this will also lessen the interference, or make it worse without the groundplane. The antenna coax cable from the antenna will interfere more if it is kept straight and not coiled around the mast or coiled on the ground. If it is straight , interference will increase.
It may be less expensive to wait for your neihbor to leave home and simply take his garden hose, put it in an open window or mail slot, and turn the water on and walk away.
There's always the cops on the other hand. Give them a try and complain.

Does any one on the list have a scanner reception booster that I see being advertised in Scannerworld and others? Do these actually work or are they just a money-grab that doesn't work. Drop me a line with your comments and the frequencies tried. Paul

I'll just keep buying used scanners, then. To Hell with them if they think they can keep me from listening. If people are going to talk about other people (or, most importantly, me), then I'm going to listen. And I live in Illinois, by the way.

d

My friends at Stupid Sscanner Tricks, I have some very bad news for you. I was doing some legal research and I ran across this new law that just passed the House and now it is up for consideration in the Senate AS WE SPEAK! It is HR 514 "Wireless Privacy Enhancement Act of 1999." It would remove the following bands from all new scanners: 43-49Mhz(old cordless telephones), 462-468Mhz(Family radio service walkie-talkies), and 902-929Mhz(new cordless phones) and the scanner companies would have to make scanners even harder to modify(ie. filling the entire case with epoxy). I read the report from the House Committee meeting that said, after all jargon was removed, the increased cost of these changes and FCC licensing charges would make the the average cost of scanners go from $200 to ~$1,000. This is a serious attempt to eleminate scanners. If you don't believe me, just go to http://thomas.loc.gov/ and search for HR514 (no spaces) and you can see what's going on. It also does things like redefining the punishme

Use a good antenna. The best radios don't work w/o an antenna.Pre-amps can overload the front end of the radio. Discone antennas
are very good for all around wide frequency coverage scanning. On VHF/UHF hight above ground can dramattically increase the
preformance of the antenna. Also use the shortest coax run possible for your location. And of course use quality coax for long
runs. I.E. Belden 9913 or equivalant. If you must use a long run of coax, this is where the pre-amp comes in. Mount it close to
the antenna to make up for line loss. At vhf/uhf line loss is a problem,longer run,higher frequncy,more loss. You want as much
gain to make it to your receiver. For a very good scanner antenna,cheap you can use a TV beam antenna. They are directional,
have high gain, and are for the frequencies we scan!
Look around your neighborhood, I bet you can get one for free. Everybody has cable now. I get them for the asking and make
other antennas out of them.
Hope this helps.

The frequencies between 43-49 mhz are not being deleted from being used,
they are being made illegal to listen to except by those who officially use
them.They are still in use, but illegal for scanning, is what i understand
congress is trying to do.

This law only effects the production of future scanners. There is no law against owning ANY radio. This new law will make ALL scanners in the stores compliant, but cannot restrict owning older models which are not compliant. (So hang on to your old scanners, they will increase in value immensely) The only way to break the law as a scanner enthusiast is to get caught listening to "unlawful" freqs. But you can own ANY radio legally. You can even buy a ham radio without a license. No problem. Using it is another matter.

Below is the result of your feedback form. It was submitted by () on
Saturday, September 18, 1999 at 21:56:23

What: Garage Door Openers
frequency: 300, 310, and 390 MHz AM
body: According to the One For All Universal Garage Door Opener manual:

390 MHz Models:
o Genie AR85, AR90, SD9500, Blue Max, EZ Lift
o Sears, Chamberlain Lift-Master, Wayne Dalton,
Master Mechanic, Raynor
310 MHz Models:
o Stanley, Automatic Doorman, Door Keeper, Vemco
o Linear, Moore-O-Matic, Shima, Powerlift
300 MHz models:
o Multi-Code, Ambassador, Multi-El-Mac

Sounds like very simple digital chirping.

I have an pretty good outside scanner antenna, and I have problems recieving the town next door, with 460 and 800 mhz bands, but I can recieve signals in the 30 Mhz band from miles away. I was wondering If i increased my coax cable size from RG 58/59 to RG 8, and make it a straight run then have end to end connectors in it, if that would increase the sensitivity. Its about 50-60 ft. in a tree.
Also, i have a c.b. antenna out there too, but i don't tx, because of high SWR. I was thinking of putting a VHF/UHF base antenna out there for my ham radio, but i'm not sure yet.
any ideas?
thanks
jeremy

When your radio gets a signal through the antenna jack, it has plenty of power to amplify the signal. However, if you have an antenna on your rooftop and run, say, 100 ft of cable to your scanner, many of the signals will die in the bowels of your hungry coax before they ever reach your scanner. The booster is made to amplify the signal before it goes through the coax. That way, it can overcome the line losses. If you use less than 50' of cable, a booster won't amplify much more than electrical noise.

Im sorry, the end of my original message got cut off. I went on to say
that the new law specifically states that it will be illegal to "import,
export, manufacture, assemble, modify, or posses a recieving device that
will intercept these frequencies." As I read it, that means it would make
a lot of radios illegal to posses. So call the Congressional Switchboard
at (202) 224-3121 and ask them to connect you to your senator's office and
tell them not to let this bill pass Senate.

new to the hobby, huh ?
Ask questions, and then ask more questions. I cannot set you up with one e-mail message. You are in the right place to ask questions. SST takes it's criticism, but I have found no group of scanner buffs better anywhere on the internet.
Re-phrase your question - tell us what kind of listener you are, such as, do you want to set up a home base antenna and listen seriously. Or do you want to set up your car for your scanner. Or both, or more.
Are you in a rural or urban area ?
There is so much out there to listen to that scanner enthusiasts tend to find certain interests detailed to their personal curiosity. Most beginners eat up everything they can hear. Start with buying frequency listings, and Radio Shack does have ONE good item I do recommend - their book, named "Police Call". Get it, learn it, dream it. Find more books.
IN GOD WE TRUST - EVERYONE ELSE WE MONITOR.

I too found little worth in scanner boosters. I have a discone antenna on a roof mast, capable of picking up direct space shuttle frequencies. But the scanner booster never got me one extra frequency. There was a slight improvement in having less static, but only on a few distant channels I could already pick up without the booster's help. Most freqs sounded the same.

I just picked up a realistic pro-37 at the swap for 15.oo and have seen on the web that there are modifications for it. however i seem to be to untechnically advanced to understand what to do. does anyone know where i can get some modification instructions that a person with little electonics experience can understand.

In the case of having your antenna in a tree, first strike against you is that a tree is a pretty well grounded structure and it deflects a lot of signal just before the signal reaches the antenna. This is very critical in the UHF band. If you can't afford a tower, just put the pre-amp in the tree to overcome your cable losses. That length of RG-58 will lose about 30% of the signal @30Mhz but the losses go up to a whopping 70% @800Mhz. Also, never transmit on your CB while your scanner is hooked up to your antenna. I found out the hard way (by destroying a pro-90) that overloading the first amp in a sensitive scanner will fry some stuff (you can replace the parts if they are not epoxied like the pro-90)! For 50 cents a foot, RG-8 will still have 50% loss @800Mhz. An amp will cost about the same and give better results (you'll still have 70% loss, but your signal may be 500% stronger to begin with).

Even though they are only differ by one number, RG-58 and RG-59 are entirely different animals all together. This is the part that most people don't understand. RG-58, like RG-8 has an impedance of 50 ohms. RG-59, like RG-6, has an impedance of 75 ohms. Your cable box has an input of 75 ohms. Your CB and Scanner has an input of 50 ohms. If you mix impedances, internal standing waves will make your signal bounce around and die in the cable before it makes it 10 feet down the line. Use the right wire, or you will hear little or nothing (especially at critical UHF frequencies, 300-3000MHZ).

Hi !
I know from the scanner list that you were looking for a copy of Winflex.
Did you ever find a copy? if so. Would you let me know where I could get a
copy? Your help would be much appreciated.

1625. [SST] recording

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-09-21 19:24:47 UTC
From: majorgadget@hotmail.com
Topic: 1621 Message: 1625

I intersested in a program for my comuter and scanner. However I don't do any kind of programing. This might intrest others also. I am a member of a VFD. We receive our call like most through two-tone sequencel paging. I would like to be able to hook the scanner audio to the computer and have it "listen" for the tones. When it heres the tones that are pre set in the program. I want it to activate a alphanumeric paging program and page my digital pager that a certain departmnet has an alarm. I've seen paging programs that will page you with caller ID information after someone calls you house. And I've seen programs that decode DTMF, but not two-tone sequencel paging. A recoduing feature that would record a "message" of about 30 sec would nice to call back and check messages. Any body got any ideas????

Hey all me again
I need stuff for my scanning and radio hobby. I would like to know of some swap meets,conventions, or parties in the New York New Joysee area where i can bring $200 and leave with a trunk full of stuff. In the fields of scanning, 10 meter 11 meter and all kinds of goodies. if any one can help me out I would thank you very much.

In order to have your computer understand the data the scanner picks up, you have to tap into the audio before it is filtered and amplified. A regular headphone jack simply will not do. You must find the FM descriminator chip and hook up to the baseband audio-out pin. But HAHA! The federal government doesn't like you to do fun things with your scanner (like decode pager transmissions), so if the new law passes, all scanners will be impossible to tap into the baseband audio (they will expoxy that chip along with everything connected to it). In the mean time, you can go to http://www.scancat.com/hints.html to see how to tap into your baseband audio, the go to http://home.foni.net/fliegl/ and download the decoder.

From: Andrew Koch
Topic: 1621 Message: 1630

What would be even better is if this program was avalible for Macintosh :)))

I also am a Volunteer Firefighter, dispatched with 2 tone paging... But what I would want is a way for the program to E-MAIL a message to a certan address informing me of the dispatch... My Cellular phone can recieve e-mail messages, and this would be ideal for letting me know when I was dispatched, even if I was out of range of the dispatch center.

Even if the software coulden't do that much, just log what tones are playd and alert when certan ones are...

1631. [SST] Re: re: preamp

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-09-23 18:28:24 UTC
From: Pete Taylor
Topic: 1612 Message: 1631

Gain and loss is a two way street! The better your coax the more signal reaches your receiver.
Here is the rated loss for some popular brands of coax. for 100'.
7/8" hard line .458db@100mhz .834db@400mhz 2.3db@100mhz
9913 1.4db@100mhz 2.6db@400mhz 4.5db@1000mhz
RG-8u foam 1.8db@100mhz 4.2db@400mhz 7.0db@1000mhz
RG8x mini 3.7db@100mhz 8.0db@400mhz 13.5db@1000mhz
RG-58u solid center 4.5db@100mhz 10.0db@400mhz 17.0db@1000mhz

Decibels (db) is a logarithmic equation.
here is some examples:
db change power loss/gain
1.0 21%
2.0 37%
3.0 50%
4.0 60%
5.0 68%
5.8 74%
Now you can see why it is important to use good coax or keep your runs to a minimum.It is perfectly ok to use RG-58 or 59 (75ohm)
for short runs to an outdoor scanner antenna. I would keep the run under 50' if possible.

Pete AA3RE (thats an extra class amateur radio call)

Anyone willing to work out Maxwell's Equations on an impedance mismatch of 50-75 ohms will find that the loss is substantially higher at UHF frequencies, so all the money you spent on a nice antenna will go down the drain (because the loss will make it perform no better than a ground plane antenna). The impedance mismatch was not important in the days of 30 MHz because the low frequency overcomes the high SWR. When I put up an antenna system, I shoot for 200+ mile VHF action. Of course if you are shooting for the police repeater 5 miles down the road, the mismatch isn't critical. Use RG-59 'cause it's cheap, but you can forget about 800+ MHz.

Okay HM,
Law enforcement for rural communities is between 154.000mhz - 159.000mhz. Look there.
Law enforcement for large cities will be there, plus two other bands: 460.000mhz - 461.000mhz and the 800mhz band.
Are there any military bases around your area you might like to listen to ?
Behind the scenes sporting events ; Buy the Radio Shack book titled, "Beyond Police Call" you'll get your money's worth.
But for now, allow me to give you 50 percent of all sporting event frequencies here:
154.600 / 151.805 / 151.625 / 154.625 / 464.500 / 464.550 / 469.500 / 469.550
Get a telescopic antenna for your scanner, and lengthen it whenever at sporting events or listening to police.
"Radar"

By 7/8" hard line, are you talking about the 72 ohm RG-11 that the cable companies use? If so, that is excellent wire to run long distances. Also, it can be found FREE in most areas. Since most cable companies are going to fiberoptics, they are removing thousands of miles of their old wire and junking it. Only problem is the stuff is so darn bulky.

If you are serious about connecting your computer to a scanner . Then buy
BC895XLT.. the port is
built into the scanner. I got mine for $215.00. List is around $300.00.
They are a bit difficult to get.
There is a large demand for them and production can't keep up. Anyway. . .
The software and serial
cable can be purchased from Scanner Master Corp. P.O. Box 610428 Newton
Highlands, MA. 02461
phone 1 800 248-5441 web page WWW.scannermaster.com Price is around $102.
delivered.
See YA..

From: Lorand Enterprises LLC
Topic: 1635 Message: 1644

This is complete rubbish!!!

Several years ago I swept 100-foot-long pieces of Belden-9292 (75-ohm) and Belden 9913 (50-ohm) with a 50-ohm analyzer. (That's a 50-ohm source and a 50-ohm load.) I found that the 9292 attenuated the signal about 0.5 dB less at 1000 MHz than the 9913. I even repeated the test with 6dB 50-ohm attenuators between the cable and the instrument.

I ran this test to prove once and for all to another know-it-all-type that he was dead wrong. Afterwards, to his credit, he even admitted he was wrong

By the way, have you ever looked into the antenna jack of a typical scanner with a network analyzer? Apparently not. Have you ever looked at a typical scanner antenna with a network analyzer? Apparently not.

Andrew Gerald
N2CBU

If you need to fish for DX on a scanner, a good way to do it
is to mount a large, multi-element TV antenna vertically,(combo VHF/UHF/FM antenna) on a mast with rotor, and you can use RG59 coax with a 300 to 75 ohm matching transformer at the antenna terminals, and whatever connectors or adapters are needed to match your scanner input at the other end.
Aim your VERTICALLY MOUNTED antenna in any direction, and
come back and tell us if the V.S.W.R. match mattered on any frequency between 50 and 1000 MHZ.
This does work, and antennae for this purpose are made and
sold even as transmit/receive high gain/high frequency multi-purpose antennae, however, transmit power is limited to 25 watts only on the designated frequencies(because of the small matching transformer used), and usually at higher than normal S.W.R. ratios.
Happy scannings,
Jack

1646. [SST] 2.4 GHz frequencies usage

From: rsellers@snds.com
Topic: 1646 Message: 1646

Anybody know what frequencies are in use in the 2.4 GHz range?

I know that some new cordless phones, Wireless TV units (cameras and Wavecom), and Amateur radio is in this area. But I was wondering if anyone knew exactly what channels or frequencies were used by these or other divices in the range?

I can not find any info spelling out channel numbers, only ranges for general group names.

Thanks,
Roger

From: Pete Taylor
Topic: 1612 Message: 1650

All cables here are 50 ohm. Cable co.s use 75 ohm. It's okay for receiveing. I.E. scanner use, but not for transmitting unless you use a transformer.

jb wrote:

> By 7/8" hard line, are you talking about the 72 ohm RG-11 that the cable companies use? If so, that is excellent wire to run long distances. Also, it can be found FREE in most areas. Since most cable companies are going to fiberoptics, they are removing thousands of miles of their old wire and junking it. Only problem is the stuff is so darn bulky.

I restate that loss is a two way street. How can it be otherwise? If you have signal loss on feedline the loss applies both directions!
Why else is there mast mounted pre-amps? To overcome line loss on receive.

Richard Raverty wrote:

the new MAC G-4 runs it's new "Airport" networking system at 2.4 GHz. it
is also a range that is used in
england and other parts of Europe for military use.

1655. [SST] new frequencies site

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-09-26 23:28:37 UTC
From: seinman@pocketmail.com
Topic: 1655 Message: 1655

hello everyone

i am starting a new web site for posting scanner frequencies. but i need help compiling a large collection. if you have rare frequencies, or if people are constantly asking you for your lists, email them to seinman@...

i'll post them on my site and then you can tell people that all the frequencies you have are there. much easier than copying and pasteing into tons of emails.

I also want to have links to major frequency sites, so if you have any those would help too.

you can check out the page at www.scanfrequencies.homepage.com

thanks

1656. [SST] Re: Importance of correct impedance

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-09-27 13:12:52 UTC
From: brown82@MARSHALL.EDU
Topic: 1635 Message: 1656

I assume you used a LAN analyzer which has a source/load of 50 ohms
nominal. Or in other words, it could have a good decoupling curve from 25
-75 ohms (as does most good test equipment). Many of the el-cheapo
scanners have OK decoupling in the same range, but excellent scanners have
excellent decoupling at 50 ohms. And yes, you can test the input impedence
of ten different scanners and get ten different readings. I guess I'm just
a die-hard like the physicist that taught about this stuff.

1662. [SST] Sporting events / Itinerants

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-09-29 23:48:29 UTC
From: Monica
Topic: 1662 Message: 1662

I gave a list of frequencies for 50% of ALL sporting events. Actually, that was not worded well. I meant that 50% of ALL the action in the USA will be on these frequencies.
154.600 / 154.625 / 151.805 / 151.625 / 464.500 / 464.550 / 469.500 / 469.550
There are MANY MORE frequencies than these - hundreds more - in the 463mhz, 900mhz, and the 462mhz family channels. But the most busy frequencies and most commonly used are the above freqs.
They are called "ITINERANT" frequencies, by law only a small wattage limit is placed on all radios who use them. I think this wattage limit is only 2 watts !!!! So you have to be nearby the transmitting source, say, within 5 blocks, using a handheld scanner in order to hear anything.
ITINERANTS are used for many types of businesses. Not only sporting events as the seasoned buffs know very well. ITINERANTS are more fun than anything else, and may be the most common place where scanner tricks are used.
"Radar" John

1664. [SST] 2.4 GHz frequencies usage

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-09-30 21:03:24 UTC
From: A.J.
Topic: 1646 Message: 1664

The 2.4 GHz area is parted out for Point to Point Unlicensed Data Connections focussed on spread spectrum... I work installing systems on 2.4 ghz for a local ISP. The frequency changing is obnoxious; my HP freq counter can't hold down the freq all the time, usually only about every 5 hops. This is all 2 MBit transfer rate, roughly the equivelent of 214,000 kilobaud/sec, or 2BaseT networking... Pretty good for a T1 to your house without a phone line.

The antennas are usually all pointing in either one or two directions, given the point to point range is less than 3 miles. They look like a stainless parabolic dish, rectangular in shape. Reminds me of a bbq grill. The US military also uses this form of communications for fireground communications. They've done drills out by a repeater we have, and the freq counter popped up every 10-15 seconds... Talking with their radio tech, I found out they use it as a worldwide coverage, with vhf recieve from satellite, then a man pack radio about the size of a small vhf mobile transciever that recieves all of the local 2.4 ghz traffic and up links it to the satellites on the very lower end of the UHF band... 128 bit real time encryption makes it kinda tough to monitor...

He also said they are using the 10 ghz band extensively for point to point. On the way out, he showed me a band hopping radio, similar to spread spectrum, but it switched randomly from vhf to uhf to microwave... fairly good range, something like 12-18 miles, with very good audio quality. Of cource, its all in digital, so we would never be able to hear it.

Thought I'd just drop that note off....

To: rbarron@...

Below is the result of your feedback form. It was submitted by () on
Sunday, October 3, 1999 at 16:05:52

What: what?
frequency: from what to what?
body: Working for a manufacturer a few years back I noticed the fork lift
drivers worked with a company two way radio (frequency 462.400) to tell
them where to bring materials and parts. This same radio frequency was
used for the truck drivers who drove for the company inside the plant.
When the workers went out on strike I was able to listen in on the
employees who stayed in the company. I heard in one instance where an
employee who stayed tried to set up a striking employee to be caught by
the police for an illegal act. Knowing this set up was to occur we
double switched the person they thought was setting up with someone else.
I remember I could hear the confusion on the scanner when they figured
out that we figured it out and made the old switcheroo.

''SCANMASTER''

1678. [SST] Cellular Scanning Story

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-10-04 04:22:31 UTC
From: Alex Carter
Topic: 1677 Message: 1678

I have a rather humorous scanning story that happened to me this Friday. It's probably the most interesting thing that's ever happened to me while scanning cellular frequencies. I was scanning cell phones because someone asked me if I could while we were at our monthly 2600 meeting which is a meeting for hackers. So I was just picking out random conversations for us to listen to. Suddenly we hear this guy saying, "They're fucking hackers! You won't believe it, there's like six of them sitting at the table by me and it's so fucking funny!" and he just kept going on and on about the stupid hackers sitting in front of him.

By this time I'd figured out it was a kid about 3 tables behind us sitting by himself and calling his friend on his cell phone who was waiting in line to get their food. I cranked up the scanner full blast so that his voice echoed back at him while he talked and we all were staring at him while I held up the scanner and he starts going, "Oh my God I'll call you back in a second! Okay?? I gotta go bye!" and hangs up quickly while we're all laughing at him. He avoided eye contact with us but when his friends sat down to eat with him they all kept looking at us. We had pondered moving the whole meeting over to his table so we could make fun of him but decided against it.

1679. [SST] Re: recording BC895XLT

From: Gene Lockwood
Topic: 1673 Message: 1679

You can monitor all transmissions. It has jacks for a remote tape player
whitch can be
turned on and off by a hit. (ie.. Sound)...

Go here ---> http://www.uniden.com/docs/product/bc895xlt/ To see a full
description
of the Radio and the RS232C Port functions.
You could probably write a small program in Delphi to do what you need..
It comes down to .. Get the transmission and resend it to a new location.

You could go to --> http://www.scannermaster.com/ .. and ask them to develop
a custom program for you. They are the ones who developed most of the BC895XLT.
Good Luck

Yes, I've had one for about 2 years, however, I haven't had the need to use the trunking feature on it. Of course, anything else you want to know, I'd be glad to answer. I think it's a great little radio. It has excellent sensitivity and it's simple in its operation. Only bad things are:
*it will NOT demodulate wide-band FM
*it doesn't pick up any of the following:
0-29Mhz, which means NO cb scanning, shortwave, AM broadcast,nor many 10 meter hams;

54-108Mhz which means NO 70Mhz factory radios, state police repeaters (in many areas), TV channels, nor FM stations;

174-406Mhz, which means NO 1.3 meter hams, nor any Military aircraft (so you can't listen to the Thunderbirds or the Blue Angels at the next Airshow!);

512-806Mhz No UHF TV

824-849Mhz Cell Low band

869-894Mhz Cell High band

956Mhz and higher, which means that the pro-90 will NOT be able to recieve the future of communications (above 1Ghz)

Other than having mutilated bands, it's a nice scanner. Anything else?

Below is the result of your feedback form. It was submitted by () on
Monday, October 4, 1999 at 19:10:48

What: radio stations
frequency: 487.5000
body: Try adding the number 4 to your favorite fm radio station frequency.
If you like 97.7 Fm It would be 497.7250.
If you like 102.7 it would be 502.7200.
This trick only works for radio shack scanners that are not
trunk-tracking.

a really good trick to know
a frequencie take out the scanner antenna get close to what ever ur
trying to scan and bingo!!!!!!

I`M TRYING TO BUILD A WEB PAGE I NEED HELP I DONT EVEN KNOW HOW TO AD A PAGE
OR POST A PICTURE ,I HAVE SO MUCH INFORMATION I NEED SOMEBODY THE WILL DO
ME THE FAVOR NEED HELP I PROMISES TO POST ALL U PEOPLE THE HAVE WEBSITES I
WILL PUT THE LINK (wich I dont even know how to but i promise....)PUT ALL
OF YE PEOPLES PICTURES UR SCANNER OR DOGIES (WICH IT DOSENT COME TOSBJECT
BUT U KNOW)I WANT THIS WEB PAGE TO HELP SOMEBODY OR EBRYBODY AND IN THE NEAR
FUTURE U WILL SAY I OWN A PIECE OF THE WEB PAGE OR ULL HAVE A LINK MY
WEB PAGE IS WWW.SCANNMASTER.HOMEPAGE.COM
OR I NEED SOMEBODY THAT WILL DISING THE WEB PAGE AND I WILL PUT THE
INFORMATIO AND PUT DOWN A CHAT ROOM .THAT WILL BE COOL HUH... THE SCANN
HACKERS CHAT ROOM.... IS NEAT HUH I NEED ALL YA HELP LETS MAKE THIS BIG IF
U THINK I`M CRAZY WELL I WANA HEAR FROM ALL OF YA COME ON .... TYPE
SOMETHING ...IF U NEED TO WRITTE PERSONal STUFF email me at
RNOVOA4298@... thanx
(HEY AT LEAST I HAVE A GOOD EGO) LOL

Topic: 1684 Message: 1697
Attachments: 1 described; binary payloads are missing from this source WARC

they could be going to simplex low power, on the same freq.
try also the gov't channels listed for the area.
i've even heard them go to good old cb.
check their antennas on the cars or the general freq. range.
look also on the rear deck for a shorty,also.
i've heard terms like "go down", " meet me at the river", and a none
used channel number that is like your channel 5, to be found on a seldom
used fire channel. next time you see a car parked, check the radio head,
it sometimes will give a clue to the manufacturer for the ability to
program in a narrow range like some Motorola's and the old GE control
heads. i bet you could find the channel if you were close enogh to the
units, while running a block search of freq,s.

1698. [SST] cellphones as receivers

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-10-05 22:54:30 UTC
From: r codie
Topic: 1698 Message: 1698

a thought, which i hope won't blow up like "what voice is the weather bureau using?"

all those old bag and big handset cell phones i see in the junk shops for less than $5.
they all are receivers and transmitters on cell freq.s.
they all have the ability to scan for an empty channel.
why can't they be modified to do the reverse of their purpose.
instead of searching for a channel to broadcast on, why not search for a channel only to receive on?
defeat the id recognition feature so that it stays on receive only.
is there an eprom that makes this undoable?
what say you techno"s?

1699. [SST] scanfrequencies.homepage.com updates

scanfrequencies.homepage.com has been updated. you can now listen to police in chicago, la, new york, dallas, and miami live. also, a few new frequencies have been added. within a week or two, over 500 new frequencies will be added to the page. also, the address to submit your frequencies or request frequencies that you would like to see on the site has changed to scanfrequencies@... now.

1700. [SST] PD "Channel 5"

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-10-07 02:00:46 UTC
From: Robby Workman
Topic: 1700 Message: 1700

I'm not sure who was asking, but someone made reference to locating a "channel 5" that was mentioned by his local law enforcement. Here are some suggestions:
1) If your state has a statewide law enforcement net, which may be referred to as "statewide high band" or "state net" or "interagency net" or "statewide car to car" or something to that effect, try scanning this frequency. For example, in Mississippi, we have two such frequencies: 155.490 MHz and 155.730 MHz.
2) You might try scanning the nationwide law enforcement net, which is 155.475 MHz. It is sometimes referred to as National Crime Net or National Law Net.
3) If you locality has any other frequencies that you never hear any traffic on (other than repeater inputs), you might try these. Often they will be listed by the FCC as "local government" or "utility" licenses.
4) Some agencies use repeater input frequencies as talkaround channels. For instance, suppose a repeater used 154.830 MHz with a 127.3 Hz CTCSS tone for its input side, and 155.790 MHz with 127.3 Hz CTCSS for its output. Most scanner users do not scan the input, because NORMALLY all traffic on the input side gets retransmitted on the output side. HOWEVER, suppose that this same agency uses 154.830 MHz as a simplex (talkaround) channel; they do this by using a different CTCSS tone (such as 156.7 Hz CTCSS). Radio traffic transmitted used in 156.7 Hz would be rejected by the repeater, while traffic with 127.3 Hz would be retransmitted.
5) Finally, if you are in a small town, and you know some of the officers' names, check FCC listings under their last names and see if any of them have a frequency licensed to them. I know of several small towns where this is the case.

PS - If all this fails, your l.e. agency may have gotten a "secure" frequency from the FCC. These are issued for narcotics, swat teams, etc.
Good luck and 73's, Robby KD5GCK

1704. [SST] i think i'm the only canadian here

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-10-08 02:05:12 UTC
From: creme.brulee@sympatico.ca
Topic: 1704 Message: 1704

ok, i've been lurking (occasionally) for about 6 months now but i gotta ask, are there any other canadians here? i know our government says that "the broadcast spectrum is a finite public resource and therefore should be equally accessable by all members of the public" so we have a bit more freedom than our neighbours to the south as far as available frequencies go, but hey, before i go too far and start rambling, is there anyone from ontario here? i have literally TONS of freqs available (in province, that is (sorry americans) snd for those of you who live in canuck-land but not in ontario, i have a whole bunch of nationwide federally licensed freqs as well. email me and i'd be glad to trade.

p.s. i also like american border-town freqs from cities like detroit or niagara falls. even if the individual states prohibit scanners, we can pick 'em up and follow the action as if we were on the other side of the river.
k

From: kepi blanc
Topic: 1708 Message: 1708

I have three copies of the 1999 edition of Police Call volume eight. It lists all known police, fire, emergency medical, and even business frequencies within the the states of Arizona, Colorado, Idaho, Montana, New Mexico, Nevada, Utah, and Wyoming. Normally sold at Radio Shack for 12.99 plus tax, I will send a copy to anybody who makes me an offer to trade something of comparable value, such as lists of valid U.S. Federal law enforcement frequencies, such as ones used by the FBI or the ATF. I have no use for these manuals myself. Rather than throw them out, I thought somebody would want to trade something with me for them. Just make me an offer and we'll discuss it.

Thanks!

1709. [SST] Request for INFO on Railroad Frequencies

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-10-08 14:08:22 UTC
From: John Wm. Schmidt
Topic: 1709 Message: 1709

Hi:

My scanning revolves primarily around Railroad frequencies.

1. Any info in this area is requested.

2. Somewhere on the web there is a list of all RR frequencies sorted first by railroad and also by frequency breakdowns in the 160. &161. range. Can someone please help me find the exact web site address.

3. Also does anyone know the frequencies the rail fan groups use when operating excursions?

John

Yeh, it's really kind of stupid that the so called "champion of freedom" seems so bent on bowing before the desires of Cellular giants at the cost of our rights to the bands. It would be neat to check the voting records and see how many congress members received campaign contributions from "Telecommunications" and then voted for the Wireless security act.

The pro-91 is just like the pro-90 except it has 150 fewer memory slots.
Also, if the model number says "200-0521" it may have some mods. However,
if the model number says "200-0521(a)", that means it is tried, tested,
and certified NO MODS. If you turn on the radio whilst pressing any 3
diagonal number keys (1,5,9, or 3,5,7), it will display the CPU software
version number followed by an additional code (valuable technical
information), then it will go to normal operation.

Most any transmissions I hear on the 170Mhz and 410Mhz bands sound like this: Click.... brpbrpbpr.... SSSSHHHHHHHEIIIIIIIIIIK almost like a birdie frequency. There is no secret to finding frequencies, the secret is in the real-time digital encryption they have on the radios they use in many areas now. Nothing special. You can buy similar radios for under $500. If you wanted to somehow monitor this, you'd have to have a DES descrambler and a lot of time on your hands. There are (256)^7 possible codes, that's 72057594037900000 different codes. If you had a supercomputer capable of iterating a lightning fast 100 million permutations per second, it would only be 23 years before you tried every code. What fun is it to listen to the scanner on 23 year delay?

I have a Kenwood TH-79A HT which can be coaxed into receiving everything
from 300 to 400 Mhz. I understand that there is military stuff in that
range but
have never heard anything.

Anyone know and good freqs in that range in the Southern California area or
nationwide?

First, you may want to obtain an owner's manual for your Pro-37, which can be special ordered at Radio Shack for $7.89 plus tax plus UPS ground shipping. The manual will tell you what sort of coverage you have if you don't know already. Your scanner may have 800 MHz band coverage. If it does, and it only uses double conversion instead of triple, you may be able to receive cellular "images" already. I once had a Realistic scanner that did that, but I don't remember what model it was. (Does anybody on the list know which one I'm talking about?) This particular scanner was stolen from me unfortunately. I don't know about mods for your scanner, but if you can receive the cellular "images," then maybe you shouldn't bother. I doubt seriously that your Pro-37 could ever trunk track also.

>how to use it?

"All that crazy stuff" is explained between pages 34-53 of the owner's manual. If you lost that or whatever, here's another explanation. First, select a bank for trunk tracking. Enter in valid trunked frequencies (They must be 851.0125-868.9875 MHz in 12.5 KHz steps.) that can be obtained either from a list that came with your Pro-90 or from Police Call, also sold at Radio Shack. Once you have valid frequencies from your area, enter in the highest one to begin with and follow in descending order. Then determine the appropriate fleet map. Police Call is a good source for that also, in the trunking database section. The E1P1-E1P16 are the 16 preset fleet maps to choose from, but the USr means "user," which is for programming a custom fleet map. A careful of the preset fleet map charts on pages 49-51 will help determine if any of them will work for the trunked system in question. Experimentation may be necessary with the presets. If complete radio conversations can not be tracked, then the fleet map being used is wrong. If none of the presets work, then it would be necessary to program a custom fleet map, such as size S-13.

Topic: 1718 Message: 1731

Try searching from 902-909Mhz then 924-929Mhz. Uniden makes their new scanners extemely hard to hack. Try unsoldering all the micro-thin leads to the EEPROM (after you remove the epoxy without damaging anything), then upload the assembly language into your pc with a compatible EEPROM reader-writer. Then, examine the code (with a schematic at hand) to see what part of the program does what to the hardware. Then after you discover the part that tells the CPU to skip the cell range, just edit that part with a compatible assembly editor, erase the EEPROM, then download the new program into the magical little chip (be absolutely sure the checksum [either hexadecimal or octal] is correct, or your scanner might lock up frequently or not work at all). Then solder everything back, then you have a free American scanner. Now do you see why it's hard to do a mod on a Uniden based scanner?

PS... "It started with the cell range, then they took away the cordless range, then they said only criminals would want to monitor police activity, so they took away the police bands. Then Capitol Hill said we have no legitimate use for them except to modify them to pick up police, and that's when they banned scanners."

Just becase something displays it on the screen and scans in that range
doesn't mean it will actually receive it. First, find an RF generator and
set it to 350Mhz then test to see if it will pick up on the carrier. Many
times, a mod will make a scanner display frequencies that the hardware
just can't demodulate.
If it does work, you still may be out of luck. The military uses DES
scrambling. They have an analog mode which you can hear, and a secure mode
which sounds like a harsh carrier. Most of the time, they use the secure
mode (refer to the e-mail subject: [sst]trade offer 1999 police call).

The bandwidth for 900 MHz cordless phone is between 902.000 and 928.000 MHz, with spacing typically done in 12.5 KHz steps between channels. The frequencies vary, since the makers of the phones designate them with 20, 40, 60, or even 100 channels for the phone in particular to operate with. Sometimes the amount of channels the phone has will be listed on the box it comes in, but the specific channel frequencies usually are not. Like VHF 25 channel cordless phones, 900 MHz cordless phones use two frequencies, one for the handset, and one for the base charging unit. The handset frequencies, the ones with only the side of the phone call that the cordless phone user is on, are usually in the lower part of the 902-928 MHz range. The base charging unit frequencies, which have both sides of the phone call, are usually in the higher part of the 902-928 MHz range. The scanners of today can only receive the frequencies of 900 MHz ANALOG cordless phones, which tend to be the lowest priced 900 MHz cordless phones, so they are perhaps the most commonly used phones by the general public. Forget trying to receive signals from 900 MHz digital or 900 MHz digital spread spectrum phones, scanners today are incapable of that. Fortunately, since the digital ones are usually over one hundred dollars, few people out there are likely to buy them.

Thanks for the reality check. Well, I don't know what else to ask for then. What's a fair trade for what I have? Should I just sell the manuals on ebay?

the only thing you will hear in that range is air craft and they run in the AM mode so you will be disappointed. most of the MAGIC Flights run that frequency. Magic is the code name for air refuelers. theres not much else that runs in the 300 area but in the 400 area there is all of the goverment trunked systems. you can tap into them. you can find most of those frequncies on line if not i have them. if your interested aND LIVE IN THE EAST COAST YOU WILL FIND A LOT OF 200 trunked systems in the medical field running there. and that is in an area you can monitor. good luck

Go to www.search.com type in new York State
frequencies. It will give you many URL's to look at.
There is one goos one that actually brakes it down by
each county in NY (sorry I do not remember the URL).
Good Luck

From: Alex Carter
Topic: 1727 Message: 1742

http://www.davee.com/scanrec.html

Visit that URL, it's an awesome application if you want to record scanner activity while you're away from the scanner. You hook your scanner's sound output into your sound card and run this application. The application constantly displays the level of noise so you can determine what is "silent" and it will only record when it hears sound. I've done this before with voice activated tape recorders but the results were never very good. Then again I never spent good money on a nice voice activated tape recorder.

But anyway, use this application because it rules! I've set up a dedicated computer running this application that records all of the telephone calls we get. Don't ask, I get a lot of weird phone calls okay? I've never used it for scanning yet but I will probably do that when I have a need for it.

1751. [SST] Re: Scrambled Radio (Was: Trade offer for 1999 Police Call manual)

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-10-12 13:07:29 UTC
From: Andrew Koch
Topic: 1708 Message: 1751

I did some quick figuring, and with my new computer that I just got (PowerMac G4/500) and about 2-3 hours in Code Worrier, I could make a program that could try every possible permutation on a 12 second transmission in just under 9.16 years (Assuming 5 arithmetic calculation per permutation, 1.25 Gigaflops, sustained...)

That's not quite as bad as that 25 year wait... Right?

Anyway, to get to the point, if I HAVE the correct DES Key, how would I go about de-crypting these secure transmissions...

My local police department uses a DES system and it's really annoying... They also use the older "Voice Inversion" scrambling... But I can decode that with my scanner and 2 shortwave radios :)

If you have search capability on your scanner, try that. Just start with a range of low frequencies & work up. It's really easy.

You may be able to order them from Digi-Key (look on the internet) for
about a buck-something each.

Topic: 1705 Message: 1756

The 1.00 is the program version (like Dos 5.0), and the number is some kind of hexadecimal code identifying something that Uniden will not release (The schematics and I/O code for this rig are kept under lock and key). 0208 in hexadecimal is 520 in base 10. This is the model number of the pro-90 (20-520), so it may have the same CPU as the pro-90. This is, however, nothing but an educated guess. It may not mean that at all. Maybe if more people could try the same thing and tell me what the thing says and maybe the model number too, I could do some math and see if a pattern develops. The pro-2042 can have the cell range digitally unlocked by inputing a 20 digit code using a computer interface. Maybe the number the new scanners display are some unique code telling how to unlock export models, just like the pro-2042. Maybe this scanner has a mod after all...

Please send me any info you can so I can crunch the numbers...

From: brown82@MARSHALL.EDU
Topic: 1728 Message: 1757

The entire manual is on-line, so there's no need to order it. It's at
http://support.tandy.com/support_electronics/28537.htm

I've seen scan control chips offered for sell on the internet that will
track motorola and ericson trunked systems. Installation is VERY
complicated, but the company offers installation for a price...

I can't tell you how to make your scanner get cellular range back, but I
can tell you how they removed cellular range in order to comply with US
Federal Law. You see, Austrailian and European models pick up cell phones
because there is no diode in the space labeled "D-13". In order to make
these radios comply, Radioshack simply soldered a diode in this position.
Of couse, if the diode was not there... hehehee.... Refer to
http://www2.nightowl.net/tyler/pro37.htm for more info.

> First, you may want to obtain an owner's manual for your Pro-37, which can be special
ordered at Radio Shack for $7.89 plus tax plus UPS ground shipping. The manual will tell
you what sort of coverage you have if you don't know already. Your scanner may have 800 MHz
band coverage. If it does, and it only uses double conversion instead of triple, you may be
able to receive cellular "images" already. I once had a Realistic scanner that did that,
but I don't remember what model it was. (Does anybody on the list know which one I'm
talking about?) This particular scanner was stolen from me unfortunately. I don't know
about mods for your scanner, but if you can receive the cellular "images," then maybe you
shouldn't bother. I doubt seriously that your Pro-37 could ever trunk track also.

I'm trying to figure out whether or not this is related to the serial number or not. I know it's some hexadecimal code (refer to the other message). Also, please, anybody with a pro-90 or pro-91, tell me the number it displays and the serial number and model number "I WILL NOT GIVE OUT THESE NUMBERS"- I am trying to find a correlation between these numbers that may yeild a digital mod for these radios. E-mail personally to brown82@....

Try Mouser Electronics at www.mouser.com or 1-800-346-6873. I have two 6.5536 MHz crystals and nine 6.5 MHz crystals, the latter being smaller and easier to install for the application that I think you are attempting. The 6.5 MHz crystal will work just like the 6.5536 crystal will. Contact me directly if you want for further discussion.

That doesn't mean that a mod exists. It just means that Radioshack hasn't given it the "unmodifiable" model number yet. I'm sure they will soon. Uniden makes these radios into a mystery wrapped in an enigma.

1765. [SST] New Product Info

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-10-13 18:17:39 UTC
From: Metrowest3@aol.com
Topic: 1765 Message: 1765

The following new product information is from MetroWest Inc. at metrowest3@....

MetroWest has just introduced two new Mini-Max Chargers for the Bearcat 220, 230, 235, 245 XLT and Sportcat family of scanners. Both are built in the original Uniden CRX-120 cradle housing, but are smart chargers and rapid chargers (4 hours or less). Both come with a new, heavy duty wall transformer to provide the higher current of the rapid charging, and have a bi-color LED to indicate charge status. The Mini-Max 300 is for Ni-Cads (any mah rating), and the Mini-Max 500 is for NMH cells (packs available from MetroWest) and both are currently $50 (price increase expected soon) plus shipping.
A free catalog, ordering, or information is available at our toll-free number, (800) 657-1475.

Go to www.rsasecurity.com and follow the DES links. They should tell you
all about it. Also, there is a much easier way to decode speech
inversion than using 2 beat frequency oscillators. There is a real nice
family run company that builds descramblers small
enough to fit inside your scanner (of course, they only endorse legal
use of their product) The web page is at
http://hometown.aol.com/ctpds49/index.html By the way, if you
run that decoding program, just make sure you have a good fan on the CPU
;-)

frist off Will, What kind of scan. do you have...what are its limitations?
Can you scan at 800-900mhz? I can and its a lot of fun as you can imagne.
Will there are sooooo many frequs. that I dont have the space or time to
give them all to you...if you have a search mode then use it...for at least
two days...not everyone will be on the phone or use all the frequs.
available. Hope I helped-anymore Q's?

Happy scanning,
HOEK

Nextel uses a trunked system that is known as Specialized Mobile Radio (SMR) and their network is nationwide. Individual users of Nextel phones do not require an FCC license, so there is no way the individual frequencies can be listed. Nextel two-way radio transmissions and phone calls are within the 800 MHz cellular bandwidth. However, since both the two-way radio transmissions and phone calls of Nextel users are digitally modulated, monitoring them with just a conventional radio scanner would be impossible.

A cheaper way is to buy one of those "Kmart" phones that has the hang up
hook switch, DTMF pad on the handset. Look at the end of the phone plug,
It should only have 2 wires A red and green. Cut the plug off, strip the
wires back, go to Rat Shack, get to insulated little alligator clips ,
hook one to each wire. There you have a "poormans lineman set". You can
even be cheaper and buy a phone jack. Take some extra wire , open the
jack up, strip and screw a piece of wire to the red and black desinated
screws, connect a alligator clip to each. Then take any phone . plug it
into your modified phone jack, Turns any phone into a linemans set.

try a good library and look up volume 8, number 1, page 4 of World Scanner Report. It's there (a plan for a push-on, push-off switch)

I was scanning the 806-956 band and went to make a call from my cell phone. Next thing I know, I'm hearing myself on the scanner (although with some static). Is this because of the close proximity of the phone to the scanner (2-3ft) ? Could this mean that there could be a mod.?

I just bought one at a flea market it came in a box of phone junk. I only paid $10.00 for the whole box. It had a brand new handset in it blue in color. I see them in the electronic supply stores they are a whole lot more than $10. Keep your eyes open especially at pawn shops.

No.

Not only is Nextel's system digitally modulated CDMA cellular PCS, it is also encrypted with a custom 48 bit encryption scheme that is kept strictly confidential, however, I have heard rumors that it is similar to GSM, although I doubt it....

you'll have to modify your scanner which isn;t very hard too do because all scanners sold or exported from the united states have the cell freqs locked out some scanners are easier too modify than others as easy as removing a lead or a chip or it might get complicated but I have to say your intention to attempt to monitor your daughter's cell phone conversations is bith malicious and it happens to be ILLEGAL I guess I might be sounding kind of hypocritical by giving you advice on modifying your scanner and then getting mad when your attentions are less than what I feel is fitting behavior for a father. Anyway you can get the info anywhere.

Do you even have a scanner? More importantly, is her phone analog? You didn't give enough information about what you're dealing with.

I used to own Nextel phones and used them in business as a driver. I always had my Nextel phone in the car along with my handheld Radio Shack Pro-90 scanner. Despite being digital, the Nextel phone had a strange effect on the scanner though. Every time I received an incoming phone call on the Nextel phone, the scanner's sound volume would start clipping a little about one or two seconds before the phone would even ring. This happened not matter what frequency my scanner was on, or even if it was just scanning. Would anybody know how to explain that?

It seems your scanner was producing an image, assuming that the cell phone frequencies are blocked from reception. (All scanners have been sold with gaps in the cell band since 1994.) A scanner image is simply a reflection of a different frequency, thereby a false frequency. Scanners that have dual conversion circuitry are the most likely to produce images. Scanners that have triple conversion circuitry (I think your scanner is one such type.) reduce images severely, but your close proximity may be a factor. The false frequency will always be the same step size away from the true frequency; the step sizes being 21.4 MHz, 21.6 MHz, or 21.7 MHz respectively. The size of the step depends on the scanner. The image may be higher or lower than the true frequency. If anyone desires a more detailed explanation of this phenomonom, please request so here.

its very simple sean,
the next time she uses the phone- use your search mode to find the freq.
that shes using...you will need to scan 800-900mhz
happy scanning...and hope you dont hear anything you dont want to hear

Back when it was not illegal to monitor cell calls, I used to hear a guy talking to his girlfriend. He would always complain that he couldn't eavesdrop on other cell users because his scanner would lock up on his signal.

You may be hearing an image frequency, or you may be close enough to your
scanner that you're just overloading it with signal from your phone. There may be a modification, but probably not one specifically to pick up cell phones.

> you'll have to modify your scanner which isn;t very hard too do because all
> scanners sold or exported from the united states have the cell freqs locked
> out some scanners are easier too modify than others as easy as removing a

Some scanners can be modified, but most can't. A few models from Radio Shack and Uniden were the most popular ones to be modified, though there were
a few others. Some import models didn't need any modification. For those
that CAN be modified, remove/add a diode or resistor is the usual answer.
For the vast majority of scanners, no such trick is available, though you can
hear clearly on image frequencies.

Since 1994, no scanner can be "easily modifiable" to receive cellular. That's
too bad. It's not illegal to monitor the frequencies, only the conversations.
Praise be to the U.S. Congress for that bit of silliness!

1797. [SST] hey guys, i really need help! i need to find a way to open all my freq.

Well, that will happen with just about any digital phone...

What you are hearing is the phone's transmitter interfering with the
amplifier circuits in the scanner...

Try it near a large stereo system sometime :) You can really make people jump!

This may rock your scanning world, as it did mine:

http://www.perconcorp.com/datafinder/

Go there & click on "U.S. Frequencies," then pick the way you want to search... You can find all freq's on the spectrum that are licensed to your specific area... Pretty cool. Though not all may be in use. Has anybody seen this site before? I'll probably be "borrowing" all the Austin (Texas) freq's I can, for use on my website:
http://members.xoom.com/doghostage/textual.htm

Forget about the shortwave radio. Just go to
http://hometown.aol.com/ctpds49/index.com and order a descrambler. I
bought the parts and built one and it works excellent. It is small enough
to put it inside many base scanners. You can leave it connected to your
scanner and just flip on the switch when things go scrambled. If nothing
else, go to their web page and listen to the before and after audio
samples. They have many different models, scanner calibration service, and
lots of good stuff to mod into your scanner.

Avoid that at all cost! Unless your scanner is still under warranty, you may be out of a scanner soon. I did exactly the same thing with my pro-90 and killed it. Turns out that a signal so close still gets amplified umpteen gazillion times by the first FET and overloads (and kills the reciever). I looked at it and though "Hey, no sweat. I'll just replace the IC it burned out." WRONG. I found that the first amp circuit is covered in epoxy from the very point where the antenna lead enters it. I removed the board and x-rayed it and it confirmed my fears. Also, under the epoxy just happens to be the location of the stuff you want to mess with if you want to oveload the cell rejection. I hate epoxy when it's not used as a heat sink!

1805. [SST] Funny Dispatches?

Yahoo group: stupidscannertricks (1998 — 2000)
Date: 1999-10-22 06:31:46 UTC
From: Rich Barron
Topic: 1805 Message: 1805

Have you heard any funny dispatches or calls? The ones that you just start cracking up about when you hear them? Here are a few of my favorites (one from yesterday):

Highway patrol dispatch to unit: "...respond northbound 57 at Ball for a pot in a hole in the number 2 lane."

Thirty seconds later with laughter in the background: "That's a _pothole_ in the number 2 lane."

---snip---

Beggers/panhandlers are a problem at some offramps so the CHP scurrys them off when they get a call about one. But it must have been a slow day when this dispatch went out in complete deadpan:

"[unit number] if you have any loose change you can swing by the northbound five offramp at seventeenth and give it to the panhandler there."

Then just moments later...

"If the panhandler will take anything you can give him the ladder that is in the number three lane, southbound five at Redhill."

---snip---

Of course reading these here doesn't do them the justice they deserve. But the best ones are the ones you don't expect from the straight laced dispatchers or hardened officers when that funny situation crops up.

Does anyone know how I can mod my bc-3000xlt scanner.
It has cell frequencies blocked and also most of the
UHF tv range. It says that is covers everything from
25MHz to 1.3 GHz, but it doesn't cover a lot in the
600-799MHz range plus the cell frequencies. Thanks

1: Turn on you scanner while holding in the 3,5,and 7 buttons.

2: Write down EXACTLY what it says (be sure to clearly indicate capitol
letters and lowercase letters

3:E-mail me at brown82@... with the following information:

a)EXACTLY what it says
b)model number, like 20-520A
c)8-digit serial number
d)how old you think it is and anything else you know (eg. Was it ever
repaired?)

Everything helps. I'm building a database to break the unlocking code.
I am not a fed trying to look up your butt, and I will not release the
serial numbers to anyone.

Probably one of the best was on an EMS dispatch frequency:

They had dispatched an ambulance to assist a 40 some od year old woman who had fallen. That was the only information that they had been given.

5 or 10 minutes later, the dispatch center hits the tones again for additional personnel for lifting assistance. This is a common occurrence, so that in itself wasn't too funny.

What WAS funny is when they dispatched the FIRE DEPARTMENT for lifting assistance.... "with an approximately 850 pound woman, in her residence..."

Though I'm not one to make fun of someone that heavy, it WAS funny that they actually had to dispatch an entire fire crew to assist!

One morning about 6 years ago I was listening to my scanner before
I went to take a ham radio test and heard the police dispatcher call one
of the cars and ask where the coffe pot was. That was funny by itself,
but it was made funnier by the fact that during the entire exchange,
both of the cops were talking as if it were normal 'i'm giving a ticket'
traffic. One of the perks of living in a small town I guess.

Jonnie Coffman, KC5JFS

This may rock your scanning world, as it did mine:

http://www.perconcorp.com/datafinder/

Go there & click on "U.S. Frequencies," then pick the way you want to
search... You can find all freq's on the spectrum that are licensed to your
specific area... Pretty cool. Though not all may be in use. Has anybody seen
this site before? I'll probably be "borrowing" all the Austin (Texas) freq's
I can, for use on my website:
http://members.xoom.com/doghostage/textual.htm

> 600-799MHz range plus the cell frequencies. Thanks

All scanners made after 1994 or so have the cell frequencies
blocked so that they can't be restored. Earlier scanners
had the frequencies in there, but they were *bypassed* with a diode or
resistor. If your scanner is one of the later models, you probably
can't get the frequencies back. You can listen to image frequencies,
though. They're above 900 MHz.

As for the UHF TV frequencies, you're out of luck. There were never
any modifications for that. The radios use those frequencies for mixers
and oscillators and that voodoo they do so well, which gives us all
those
police and fire and ecnalubma frequencies.

1826. [SST] Re: Funny Dispatches?

Yahoo group: stupidscannertricks (1998 — 2000)

A county officer stopped a car and the driver was of Middle East origin. He gave the info to the dispatcher, pronouncing the name (which I have forgotten, so I'll make one up) "Dzugashvilli. . . common spelling."

A fire unit was dispatched to check out a "CO2 detector sounding." CO2 is the stuff that gives Coke its fizz. A few seconds later the dispatcher came back laughing and giving the correction to "CO detector."

1827. [SST] Re: Funny Dispatches?

I don't know if I should say Rich. You might have heard the "cucumber call "
from 'station 18' OC dispatch a few months ago. I won't share the details
with our members, but if you and your mate ever get a cucumber stuck don't
dial 911 because it goes out over the air. That's the best call (wierdest)
i've ever heard on my scanner.

Point of information. First off Nextel is TDMA. Second, I would like to know where you got the information that the conversations are encrypted. As far as a anti-cloning method, the signon to the system is encrypted, but not the actually conversation that are strictly digital. Correct me if I am wrong, please.

favorites (one from yesterday):
[snip]

One day I was at a friend's house showing my handheld scanner and telling him about monitoring as a hobby in general. At the precise moment I turned my scanner on, we heard a transmission from a police unit about an attempt to serve a warrant at the address of my parents' house, where both my brother and I grew up. Needless to say, I was shocked and worried, trying to think about what possibly could be the reason the police would be seeking to arrest me and/or a member of my family. My friend kept saying that we probably did not hear the address right, but since I already knew the broadcast was on the frequency used by the township where I once lived, I felt there was no mistake in what I heard. So, I called my parents' house on my cellular phone. My mother answered, and I asked her if the police were there. She said they were just arriving, and asked me how I knew. I explained how, which wasn't easy. As it turned out, the police were attempting to serve an outstanding arrest warrant on my brother for unpaid parking tickets he acquired the year before from a distant resort area on a vehicle registration he used to have at my parents' address before he moved out. The police left after my father told them my brother was not at his address anymore. I called my brother that night to tell him what happened. He sent payment and a letter of apology without delay the next morning!

the signal is NOT CDMA

it uses 16QAM/TDMA

it can tranmit in a standard radio channel 25khzit can send/rx 64kbs data

the Iden signal requires approx 10kbs to tx a voice, so with 64kbs it can in
the standard 6 to 1 mode(dispatch) send 6 voice channles or in the 3 to 1
mode (phone)
send 3 voice channles.

if you go to the motorla web site and order the manual # 68P81086C96-0

it has a very good beginners section on the Iden technology.

the manual cost very little and then you too can be the Iden know it all!!:)

BUT the Iden siganl is not PCS or CDMA..it is TDMA

a big difference.

AAAh Yes, the marine band freqs,
I don't have a list for you with me but I'm sure someone will blast that at you.
But during a few years in San Francisco the Coast Gaurd there was very busy on these channels.
Primarily 156.800 is the nationwide distress freq. (called channel 16)
157.100 is the channel where emergency traffic is sent to keep channel 16 clear. (This is Ch.17)
157.050 is used by the responding helicopters. (channel 17-alpha)
These three channels are all you need to monitor emergencies in the bay area. Perhaps they are used in same fashion world wide.

Rich,
I have two I heard recently. One involved a Santa Clara County
sheriffs
deputy, replying to some information he had requested. Instead of
simply
acknowledgeing the info, he said, in his best Elvis voice "Thank you.
Thank you very much."
The second was when a local (Sunnyvale) fire unit was unable to locate
a
reported vehicle fire. The dispatcher relayed "Just for your
edification, the
CHP was unable to locate the vehicle either." The fire unit replied
"Thank
you, we're edificated."

Not only is Nextel's system digitally modulated CDMA cellular PCS, it is
also encrypted with a custom 48 bit encryption scheme that is kept
strictly
confidential, however, I have heard rumors that it is similar to GSM,
although I doubt it....

the signal is NOT CDMA

it uses 16QAM/TDMA

it can transmit in a standard radio channel 25khzit can send/rx 64kbs data

the Iden signal requires approx 10kbs to tx a voice, so with 64kbs it can in
the standard 6 to 1 mode(dispatch) send 6 voice channels or in the 3 to 1
mode (phone)
send 3 voice channels.

if you go to the motorla web site and order the manual # 68P81086C96-0

it has a very good beginners section on the Iden technology.

the manual cost very little and then you too can be the Iden know it all!!:)

BUT the Iden siganl is not PCS or CDMA..it is TDMA

a big difference.

Yes, I agree about the TDMA part for Nextel, which would explain a lot for me in my experience with Nextel phones. Sometimes the 2-way radio tx/rx would break up and make the person's talk path sound like that person was underwater, being drowned, or something like that. In extreme precipitative environmental conditions, like heavy fog cover, my Nextel could not even tx or rx. That's much more likely to occur with digital TDMA, right? Nextel's tx/rx signal for both radio and phone are in the 800 MHz bandwidth, if memory serves, but that has always struck me as a bit odd. Why couldn't it be in the 1.9 GHz bandwidth, like Sprint PCS?

Gee whiz! Somebody else finally heard about the electronic security act! Didn't I tell you all this was happening? When cell phones go 100% PCS up above 1000Mhz, the public service bands will fill the gap: and here's the kicker! It will still be illegal to monitor the cell band even after there are no phones on it anymore! What a nice little happy gesture from your friends in Washington! Remember this: First, they came for the Social Democrats... Then, they came for the crippled... Then, they came for the Jews... Then, they came to America... Now, they've got our guns... ...and they're working on our scanners. Since they can't get all of them, they'll just move everything to bands that our scanners won't pick up. You have to have a connection to the baseband audio output (not
headphones) and run it into a computer with a program to demodulate
digital signals. But, the new electronic security act will make the
manufacturers put epoxy over the stuff you have to solder so you can't
listen to Nextel or PCS. (By the way, I wonder how much campaign money
these companies put in the pockets of the congressmen that voted for
this bill?)

The address is http://thomas.loc.gov and when you get there, type HR514 in
the blank space and hit search. This will give you the last 4 versions of
the bill intended to turn lawful scanner users into criminals.

The law says "Cops will usually hassle you for anything like that, legal
or illegal" So my advice is don't let them see it and refuse any request
to search your vehicle (that's your right). Unless a gun is in plain
sight, or something similar, they cannot touch your car without a warrant
or a statement from an individual saying that you have something illegal
in your car. Just be discreet.

Also, something that I just thought of. If you are engaged in interstate commerce, (e.i. traveling across the USA) a state or local law may not apply to you if it is drastically different from your state.
